

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. Um diese Ressource weiterhin zur Verfügung stellen zu können, haben wir Schritte unternommen, um den Missbrauch durch kommerzielle Parteien zu verhindern. Dazu gehören technische Einschränkungen für automatisierte Abfragen.

Wir bitten Sie um Einhaltung folgender Richtlinien:

- + *Nutzung der Dateien zu nichtkommerziellen Zwecken* Wir haben Google Buchsuche für Endanwender konzipiert und möchten, dass Sie diese Dateien nur für persönliche, nichtkommerzielle Zwecke verwenden.
- + *Keine automatisierten Abfragen* Senden Sie keine automatisierten Abfragen irgendwelcher Art an das Google-System. Wenn Sie Recherchen über maschinelle Übersetzung, optische Zeichenerkennung oder andere Bereiche durchführen, in denen der Zugang zu Text in großen Mengen nützlich ist, wenden Sie sich bitte an uns. Wir fördern die Nutzung des öffentlich zugänglichen Materials für diese Zwecke und können Ihnen unter Umständen helfen.
- + *Beibehaltung von Google-Markenelementen* Das "Wasserzeichen" von Google, das Sie in jeder Datei finden, ist wichtig zur Information über dieses Projekt und hilft den Anwendern weiteres Material über Google Buchsuche zu finden. Bitte entfernen Sie das Wasserzeichen nicht.
- + *Bewegen Sie sich innerhalb der Legalität* Unabhängig von Ihrem Verwendungszweck müssen Sie sich Ihrer Verantwortung bewusst sein, sicherzustellen, dass Ihre Nutzung legal ist. Gehen Sie nicht davon aus, dass ein Buch, das nach unserem Dafürhalten für Nutzer in den USA öffentlich zugänglich ist, auch für Nutzer in anderen Ländern öffentlich zugänglich ist. Ob ein Buch noch dem Urheberrecht unterliegt, ist von Land zu Land verschieden. Wir können keine Beratung leisten, ob eine bestimmte Nutzung eines bestimmten Buches gesetzlich zulässig ist. Gehen Sie nicht davon aus, dass das Erscheinen eines Buchs in Google Buchsuche bedeutet, dass es in jeder Form und überall auf der Welt verwendet werden kann. Eine Urheberrechtsverletzung kann schwerwiegende Folgen haben.

Über Google Buchsuche

Das Ziel von Google besteht darin, die weltweiten Informationen zu organisieren und allgemein nutzbar und zugänglich zu machen. Google Buchsuche hilft Lesern dabei, die Bücher dieser Welt zu entdecken, und unterstützt Autoren und Verleger dabei, neue Zielgruppen zu erreichen. Den gesamten Buchtext können Sie im Internet unter <http://books.google.com> durchsuchen.

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

OCCASIONAL NOTES.

A NEW series of articles upon "Supplementary Aids to Classroom Work" is introduced by Prof. Adams in a contribution which appears in the present issue.

Classroom Aids.

We are fortunate in being able to secure for this series the same wise and experienced sponsor as was associated with the two previous series, "Idola Pulpitorum" and "Idola Linguarum"; and we are sure that the new contributions will be equally creditable to him. The teaching of every subject in the curriculum gains strength when its implements are not limited to the text-book and blackboard, and its field extends beyond the classroom to the living world outside. Whatever views may be held as to the relative educational values of the process of learning, the method employed, and the subject-matter, there can be one opinion only upon the importance of all instructional aids which increase the interest of the pupils. The articles which we propose to publish in succeeding months will indicate how such supplementary means may be made to serve this educational end. Among the subjects for which articles having this intention have been arranged are the following:—(1) Classics, Mr. S. E. Winbolt; (2) English, Mr. G. E. S. Coxhead; (3) Geography, Mr. T. Alford Smith; (4) History, Prof. F. J. C. Hearnshaw; (5) Mathematics, Prof. T. Percy Nunn; (6) Modern Languages, Mr. Walter Ripman; (7) Music, Miss Ethel Home; (8) Science, Mr. C. L. Bryant; and (9) Art, Mr. R. D. Laxon.

SPEAKING of the judgment in the case of the Shakespeare performances for children, we said last month that, while we must resign ourselves to the

The Cut in the Grant to Universities.

impossibility of an advance, we ought not to give up without a struggle any of the ground which we have won. It is university education now which is threatened with a set-back. The Treasury have declared their intention of reducing the annual grant to universities from £1,500,000 to £1,200,000, a cut of 20 per cent. The best commentary on this is supplied by the Reports of the Prime Minister's Committees on Science and Modern Languages, appointed in the days of our "hot fit" in education. Now that we are in the middle of a "cold fit," let us read them again. Among the recommendations of the first Committee we find "that large expenditure of public money is necessary to equip the universities for their work in pure and applied science." The second spoke strongly about the inadequacy of the modern language staffs at the universities, and advocated the foundation of 55 professorships and 110 lectureships within ten years of the conclusion of the war. The Treasury officials no doubt smile now at these exuberant imaginings. There will be no grants for new universities. The Governors of Exeter University College have already been told that they will probably get no Treasury grant. The prospects of a "Burnham scale" for university teachers, who are now, taken as a body, probably paid worse relatively to their position than any other teachers, is rendered more remote than ever. Building and equipment will be made more difficult, the reduction of fees rendered impossible. The protest of the university teachers will be found in another column.

A CHANGE of some significance is being made in the regulations governing the Honours School of English at Oxford. Hitherto all candidates have been bound to offer the philology of English; henceforth they will be offered a choice between the philology and history of the English language, and specified authors and periods in English literature. But those who choose the second option will still be examined in the history of the language, and to what extent this will include philology will be known only when the Board of the Faculty issue their regulations. The change is in some degree analogous to that which was recently made in the Modern Languages Tripos at Cambridge, but it is much less drastic; for in the latter school one of the two optional parts is the "literature, thought, and history" of some foreign country during a certain period. History seems to have disappeared from the Oxford scheme, and thought was never in it. However, we welcome the recognition of the truth that philology is a study for those who have an inclination for it, and not an essential branch of a liberal education; and we hope before long to see the principle extended to the school of modern languages.

THE classicists are carrying on a vigorous campaign. In the October number of the *Edinburgh Review*, Prof. Stuart Jones gives a summary of the Report of the Classical Committee. In the *Nineteenth Century* for December, Mr. A. D. Godley writes on "Greek in Extremis" in the true spirit of the old classical scholar. He sighs over the eclipse of verse-making. He admits it is "but a jig-saw puzzle," but then the boy learns "to manipulate words," and "exercises in composition appeal to the

constructive and competitive instincts of the average cleverish pupil." This is indeed damning with faint praise. With the broader Hellenism of men like Dr. Farnell the author has no sympathy. A more thoughtful contribution to the discussion is an article in the *Birmingham Post*. The writer, unless we mistake the gist of his remarks, does not regard the classics as universally necessary to salvation. He only asks that "a due proportion of students shall enter sympathetically into the past, whilst a due proportion try to assimilate and to gauge the new." He speaks of "a great advantage in retaining nationally our old reverence (a reverence which can only be based upon knowledge) of the classical languages." With such sentiments everybody will sympathize, but we cannot help thinking of a little incident which once occurred at a semi-public dinner. A well known English professor, in proposing the health of the guest of the evening, a distinguished light of French education, asked him how he would inculcate reverence for Wordsworth. The answer, put briefly, was: "Don't give your boys and girls much of him." We wonder when the modernists are going to reply. At present the classicists have the field to themselves, and they are sedulously instilling into the public that classics and literature are synonymous and co-extensive terms, and that with the decay of Latin and Greek the schools are being plunged into barbarism.

THE Education Act, 1921, Amendment Bill, presented by Mr. T. Davies, embodies the proposals put forward by the President of the Board of Education in the speech which he was prevented from delivering at Kingsway Hall in March 1920, and which was afterwards communicated to the Press. The general position is that 36 per cent. of the elementary-school children attend the

**The Attempt to
Abolish Dual
Control in
Elementary
Schools.**

10,500 Church of England schools which exist. The developments contemplated by the Act of 1918 cannot be carried out, because the Church has no means of altering and extending premises, and the local authorities have no power of doing so. The position is therefore one of deadlock, and the old "religious difficulty," which was kept under during the discussions of 1918, now rears its head again. Mr. Davies's Bill would end the dual system of control by giving the entire control to the local authorities, who would appoint all teachers and have free use of the buildings, with the right to alter them for school purposes. Religious observance and instruction, "differentiated as far as practicable in relation to religious tenets," are to be provided for in all public elementary and secondary schools, including, of course, the existing Council schools. The imposition of religious tests upon teachers is to be carefully avoided, the local authority having power to appoint a teacher exclusively for religious instruction when the regular staff is insufficient for the purpose. All training colleges, except those for practical or physical instruction, are to prepare teachers for giving religious instruction. The property in the school buildings is to remain in the present trustees or owners, who are to have the right to use the buildings on Sundays, and at other times when they are not required by the local authority.

FROM the above outline of the Bill it will appear that the Church would maintain its special religious instruction in its present schools, and would extend such

**Its Chances of
Success.**

instruction to the Council schools. The latter provision does not, however, as was wrongly supposed by some at the time of Mr. Fisher's pronouncement, involve "right of entry," for all appointments would be made by the local authority. On the other hand, the Church would give up the right, which now exists in theory at least, to withdraw the use of the buildings, and it would give up the right to appoint a majority of the managers, and therefore the power to maintain denominational instruction on its present basis. Objections to the scheme will inevitably come from several quarters. Many Churchmen will be disposed to cling to their buildings; many Nonconformists will cry, "Hands off the Council schools"; many teachers will look suspiciously at the proposed safeguards against religious tests, and will shudder at the complicated questions of school organization that may arise. Moreover, the modern man in the street, if we estimate him rightly, may not take kindly to the idea of dividing children attending the same school into little church-folk and little dissenters. The average workman of the present day is probably not at all "keen" in either direction. To us the Bill has its attractions, as a chance of settling an old controversy and of getting ahead with the education of the children. But we believe its fate depends upon the strength and reality of the recent *rap-prochement* between the Church and Nonconformity. Things have changed since 1870; otherwise Mr. Davies might as well have saved his ink. If the reformed churches could agree upon a common scheme of religious instruction, perhaps with slight differentiation in some cases, we should have good hope of a solution along the lines of the Bill.

THE signs of the times certainly do point to the possibility—nay, the probability—of a genuine understanding, in place of a century of misunderstanding, between the Established and the Free Churches, on the question of religious teaching in schools. At an inter-denominational conference on Biblical teaching, held at Westminster on November 29 and 30, the Chairman, the Bishop of Oxford, was able to say at the close that he could not have guessed the particular church to which any of the speakers belonged. Again, the Congregational Union have asked the Archbishop of Canterbury to attend a conference to consider means for the abolition of the dual system. But, most significant of all, the Churchmen and Nonconformists of Wales have actually agreed upon a scheme—or, at any rate, the broad basis of a scheme—for putting an end to the "insidious and wasteful distinction between provided and non-provided schools." The agreement arrived at is submitted for the consideration of the local education authorities, and to that end a conference of representatives of the churches and of the authorities is to be called. It begins to look as if "gallant little Wales," which led the way in the organization of secondary education, may now lead the way in the settlement of a difficulty which has either marred or ruined the efforts of successive British statesmen to hammer out a really national system of education.

IN a foreword to the Annual Report to the Education Committee for the City of Sheffield, the Director (Mr. Percival Sharp) again alludes to the total arrest of

Sheffield. the provision of new elementary-school accommodation, and the more obvious and lamentable consequences arising therefrom. It is stated that the staff of the elementary schools on March 31, 1920, was considerably worse than in 1911, and that on the same date in 1921 the conditions had not improved. The cause is said to be the establishment of standard scales of salary, which has brought into competition with large cities, such as Sheffield, a number of smaller towns which had not previously provided satisfactory scales of salary for their teachers. In 1920-21, for instance, Sheffield secured less than half the number of teachers required—84 instead of 214—and of these 68 were drawn from the city and only 16 from other parts of the country. An interesting table shows that, whereas in 1912 the Committee were able to attract 60 per cent. of the total number of teachers appointed from areas other than Sheffield, in 1921 the percentage had shrunk to less than 20. In view of the difficulty of adequately staffing the schools, Sheffield Committee are driven to the conclusion that the path of greater effectiveness lies in the direction of a drastic simplification of the curriculum. Mr. Sharp significantly says: "What is generally termed the three R's, and what would better be termed the three gateways of knowledge—viz., reading in its broadest sense: that is, the power of acquiring with readiness, certainty, and ease the thoughts of others; and writing in its broadest sense: that is, the power of expressing simply, accurately, with dignity, and without pretence one's own thoughts; and arithmetic in its broad sense: that is, the first growth of the power of thinking quantitatively—these are the things which should be done thoroughly well, to the exclusion, if need be, of other subjects of the curriculum." We leave our readers to form their own opinions on this proposal.

Inspection. OUR readers will remember that an article appeared in our issue for last August dealing with the question of the Inspectorate, and setting forth certain opinions which our correspondent had collected from representative teachers regarding necessary reforms. The question now seems to be coming to a head, for we notice that the Head Mistresses' Association have passed the following resolution:—

That the Executive Committee of the Association of Head Mistresses, having considered and endorsed the resolution passed by the Incorporated Association of Head Masters in January, 1921:

"That in the opinion of this Association the time has come when the whole meaning, purpose, and method of inspection, including the policy of holding special periodical inspections and the method of appointing his Majesty's inspectors, should be carefully considered by the Board of Education in consultation with the teaching profession,"

invite the Board of Education to call a Conference with representatives of the two Associations to consider the whole question.

It is thus evident that two of the four secondary associations are ready to move in the matter. Further, a resolution identical with the above is on the agenda of the Annual General Meeting of the Assistant Masters' Association, and we have reason to believe that the Assistant Mistresses will take the same view. It is, therefore, to be hoped and expected that the proposed Conference, if and when the Board of Education consent to call it,

will be strengthened by the inclusion of Assistants as well as Heads, and will, therefore, be thoroughly representative of the secondary branch of the profession. It is clear that many teachers feel considerable dissatisfaction with the present system, and the holding of a Conference will be all to the good. It will, at any rate, clear the air, and if it results in judicious reforms it will not have been held in vain.

National Certificates in Chemistry. SINCE the Board of Education abandoned their functions as an examining body, there has been a lack of system in the tests applied to the progress of students in technical schools. The change from the old autocracy to anarchy was too sudden to be wholly beneficial. A new experiment is now to be tried. The Board of Education have invited the Institute of Chemistry, the premier association of professional chemists in Great Britain, to approve schemes of study in technical schools and colleges, and act as assessors in the award of certificates. The Institute will not actually frame schemes, but they will suggest, advise, and approve, in consultation with the Board. In the final year of the course the teachers will be associated with the Institute in its capacity as assessor. A full-time course in Applied as well as in Pure Chemistry is proposed, and a student will not be bound to carry out all his studies at the same institution; he may study different branches of his work at different schools. This experiment of the association of a body of professional men with the Board of Education will no doubt be watched with much interest by teachers and students of chemistry and by many other people.

The Burnham Reports and Economy in Education. RUMOUR is persistent that the recommendations of the Geddes Committee will include a reduction in the national expenditure on education. It may be well, therefore, to make the attitude of the teachers' associations perfectly clear as to the reports of the three Burnham Committees. All such organizations, whether of primary, secondary, or technical teachers, hold strongly that there is no justification for any reduction of salaries. This view rests on three grounds. In the first place, the Reports became definite contracts (not yet in full operation) between representatives of local authorities and teachers, which have been accepted by the Board of Education. Secondly, it cannot be too widely known that the scales adopted were *not* based on the cost of living at the time they were constructed; this fact rendered the scales inadequate, and therefore unpalatable to the teachers concerned, who accepted them only because a fall in the cost of living would, it was hoped, eventually render them adequate. Finally, a vital factor in the agreements was the proviso that the scales should remain in force for a definite period. Any reduction in the salaries due under the Reports will be a twofold evil. It will, in itself, be a gross breach of faith on the part of the authorities, which were consenting parties to the agreements. It will render salaries already inadequate still more inadequate, for the scales are in no sense sliding scales based on the cost of living. Strenuous resistance to these proposals we hold to be the duty of every teacher.

A COMPARISON of the rules of the Board of Education as to the issue of teaching certificates for teachers in schools of art, 1921, with those in force at the beginning of the century, is an index of how far art education has progressed since that time. Twenty years ago the qualifications for the intending teacher consisted of the satisfactory execution of certain much-laboured "works," which were, at best, only proof of his technical ability, and the passing of certain examinations, success in which testified only to his knowledge, and nothing to his power to impart it, or to his understanding of that radical concern of all teachers—the mind of the child and the growing man. The teacher of to-day must not only have satisfied the Board of his artistic knowledge and ability, but also must have completed an approved course in the principles and practice of teaching and school management. The syllabus for the Board's examination in this subject includes: (i) The point of view of the child; the point of view of the adolescent; the variation of treatment necessary for students of different capacities and different ages. (ii) The relation of art to the life of the individual and the community, and its place in educational systems, (a) as a part of general education, (b) for students whose tastes and aptitudes are predominantly artistic. (iii) The relation of art to industry. (iv) The methods of teaching drawing and art in elementary schools, trade schools, secondary schools, training colleges, and schools of art. (v) The organization and equipment of schools of art. Art training conceived in this way is in itself a "liberal education"; and the status of the art master has been raised, in the only possible way, by the discovery of new standards of value from within the profession. As a result of such training, a new impetus is now being given to civic and industrial art by the teacher's consciousness of the wider issues involved in his daily tasks. Again, here is another point on which much might be said. In the reports of the Examining Committees on the examinations held in May and June, stress is wisely laid on the necessity for observing and studying the world outside the school. We may hope for a more virile and imaginative National School of Design now that the schools are themselves teaching the danger of letting the academic outlook take the place of first-hand observation of Nature.

THE Burnham Report on scales for Secondary Schools contains various recommendations as to qualifications which should be considered as equivalent to a pass degree.

Alterations in the Recommendations of the Secondary Burnham Report.

Those relating to art have been revised, and the alterations have been duly accepted by the Board. In future, in addition to the new Art Teaching Certificate of the Board of Education, and full Associateship of the Royal College of Art, the Associateship or Schools Associateship of that College, the Art Masters' Certificate—Group I, the Secondary Teachers' Drawing Certificate of the University of Oxford, or a pass in the Drawing Examination of the Board of Education, provided that certain other specified conditions in each case are complied with, will be accepted as equivalent to a degree. A new section, 7 (e), which deals with non-graduates not otherwise considered in that section, has been formulated, which lays down the following as conditions for equivalency:—Full-time general education up to eighteen; matriculation at a British university, or an examination in lieu of matriculation; and a full three-

year course approved by the Committee, together with the passing of a satisfactory examination at the end of the course. The Report states that a second-class honours degree shall only be recognized as a "good honours" degree if the circumstances appear to merit recognition. These "circumstances" have now been defined, and take the form of conditions which will be considered as official evidence of special distinction, or additional academic achievement. The eight examples which are given show sufficiently clearly what standard is required, and should be carefully studied by all teachers holding second-class honours degrees.

ON behalf of the teachers of this country, we gladly extend a welcome to those teachers, about a hundred in number, from the Overseas Dominions, who have taken service for a year in the schools of the London County Council, under the scheme of the League of Empire for the interchange of teachers between the mother country and other parts of the Empire. We understand that 77 of these teachers come from Canada, 16 from Australia, and 1 from South Africa. We can imagine no better way in which the League could pursue its aims. Germany stands as a great example of what, for better or worse, a State can do through its schools. In the long run they are a tremendous political force for good or evil, and it is of transcendent importance that throughout the Empire they should stand for the ideals of great democratic communities. In this respect the mother country and the colonies may learn from one another. As to the actual practice of the schoolroom, the colonies, no doubt, have much to learn from the bold and varied experiments which are taking place in the old country. Furthermore, all the English-speaking countries, as Mr. Fisher pointed out when the visitors were welcomed at the end of November, have a great responsibility towards the English language, in seeing that its stream runs pure and undefiled. We hope for great and beneficent results from the interchange promoted by the League of Empire.

THE new Germany would fain make education more democratic; that is to say, organize it so that it may obliterate, and not accentuate, social distinctions.

Higher Education for Adults.

Now, difficulties, some economic and some religious, impede the realization of this desire. But the young can wait; their elders must be served promptly. In the People's University (*Hochschule*), for which Denmark supplied the model, there is achievement clearly visible; and to give some idea of what is being done in Germany for the higher education of adults we print elsewhere an article on "The Academy of Labour at Frankfort-on-the-Main," by its Director, Dr. Eugen Rosenstock. There are purposes for which water as it bubbles from the spring is preferable to the distilled water of the chemist, and we publish the article substantially as it reaches us. Yet, by way of elucidation, we set down the few words that follow. The students of the Academy are chosen by the trade unions, which support them and, if need be, their families during the nine months of study; it is the State that pays its teachers, whilst the University of Frankfort supplies lecture rooms and other facilities. In the domain of instruction the Academy does not imitate a regular university by using methods of minute

analysis, nor does it seek to train specialists in single sciences; it proposes to those who attend at it two main objects of study—*society* and the *individual*; then, at the end of the course, the two combined in *history*. The picked working man is to be enabled, pausing a while, to examine his own powers and the task that the world presents to him. For the rest, we let Dr. Rosenstock speak for himself.

WOMEN AND THE UNIVERSITY OF CAMBRIDGE.

By Mrs. ADAM, Cassel Fellow of Girton College.

The *Journal of Education* for November contained an article on the recent vote, by the Rev. H. J. Chaytor, in which the following passages occur:—

(1) The real issue amounted simply to this: the university was founded as a centre of education for men, and has worked as such for ten centuries. Does the fact that a body of women have been resident in Cambridge for fifty years give them any sort of claim to share the control of this education?

(2) Women have now obtained all that they asked for in 1897. It only remains to hope that they will accept the situation, cease to demand what can do them little good and might do Cambridge infinite harm, and allow the university to get on with its proper work.

As regards (1) it may be said that the university was founded as a centre of education. In early days there were none but men seeking such education, and those men adherents of the Roman Catholic Church. Foreigners like Erasmus were welcome visitors, but no medieval English founder would have dreamed of making special provision, either for persons of alien birth and religion, or for women in the home country. The needs of these classes were still far below the horizon, and it was not till the close of the sixteenth century that any Cambridge college opened its fellowships even to students of Scottish or Irish birth. After the Reformation there was a time of swaying to and fro: Anglicans, Roman Catholics under Queen Mary, Anglicans again, and Puritans ousted one another in turn, until the Act of Uniformity, in 1662, gave the Church of England for two centuries exclusive possession of the university. Founders' wishes, if there were any, were set at naught. After a long-drawn-out struggle tests were abolished by Parliament in 1871. British-born Dissenters were protagonists in the fight, but their efforts opened the university once again to Roman Catholics also, and, in addition, to students of all nationalities and religions. If the Lady Margaret were to re-visit her illustrious foundations, might she not be more surprised to find in the lecture rooms Hindus, Japanese, and negroes, than to see there women of tastes akin to her own?

This miscellaneous mass of students, including the women, fulfil certain conditions of residence and examinations, in return for which (plus sundry fees, which women are willing, but not allowed, to pay) all the men of every sort and kind obtained forthwith after 1871 full privileges of university membership. The women are still Outlanders, and have no status whatever. It is not control that they seek, but the right to exercise the normal functions of a society whose rules for membership they have obeyed. Resident and non-resident past students alike are deeply attached to the university, from which they have received invaluable benefits of education. They cannot help speaking of Cambridge as "our university," although she declines to look at them. They feel that they belong, and they cannot rest content, just as in history no body of *cives sine suffragio* has ever been content. They ask to be called "Cambridge women," no longer "women at Cambridge."

Two things make their position peculiarly anomalous. First, Parliament, without asking the leave of the univer-

sity to which the women may not belong, has given them the chief of university privileges—namely, the university parliamentary vote. Secondly, the pioneer work of the "women at Cambridge" impressed onlookers so much that all other universities in the British Dominions, watching the progress at Cambridge, have admitted women, almost without reserve, to full membership. The "women at Cambridge" have won the day for all other university women, and they alone remain without reward. It is as if all the Parliaments of the world were ranked and registered, save only the House of Commons, which was deemed to have no existence.

(2) In answer to Mr. Chaytor's second point, we would submit that what has now been granted to women is all that their friends ventured to ask in 1897, not all that they themselves desired at that or any other period since the foundation of their colleges. The earliest document of Girton College prescribes that its governing body shall from time to time take such steps as it shall deem expedient to place the college generally in connexion with the University of Cambridge, and this injunction has been repeated for fifty years in every annual report of the college.

Titular degrees, expressly excluding their holders from membership of the university, do not offer a final solution, and their value has lately been depreciated to a point far below that of 1897, by the generosity of Oxford in putting her women on equal terms with her men students. Again, titular degrees, without membership of the Senate or eligibility for any university post, did not solve the problem of the Dissenters, who exchanged (by parliamentary action) no status at all for this position during the years 1856-71. Every year they sent up their Bill with the cry "the university is for the nation." When the Bill became an Act in 1871 the strife faded into instant oblivion. The nation now includes women, who may well, with Prof. Adam Sedgwick (in his speech at Cambridge in 1869 on behalf of the Dissenters), "deprecate the university hiding itself in any little nook of prejudice out of the general spirit of the community."

If Cambridge is to be a university for men alone, the women who have shared its education for more than half a century should be expelled. By withholding membership from one category of students of junior and senior standing an impossible situation is created. The present policy of unequal treatment, to reverse Mr. Chaytor's words, does Cambridge little good, and may do her infinite harm. It is an ostrich-like pretence to suppose that women do not exist in Cambridge as students or teachers (not infrequently of undergraduate men), simply because they are called "women at Cambridge" instead of Cambridge women.

REMINISCENCES OF AN EX-HEAD MASTER.

By "RUDE DONATUS."

II.

ON THINGS CARNAL AND THINGS SPIRITUAL.

PROBABLY the first question which a parent or, at all events, a mother asks when she thinks of a school is about the quality and quantity of the food which is provided. Next to that, whether there is a good matron. And, after all, parents are not far wrong in so inquiring. Their boys are at the stage when their future depends largely upon how they are fed in the present, and their health upon the observation of first symptoms. Throats and stomachs! A matron is invaluable if she has a trained eye. She is worth a regiment of doctors. The ordinarily healthy boy can withstand most things in what he eats; but when he is overtaken by colic the capable matron has no hesitation, and has few failures. Throats are not so easy and may require the doctor; but, even here, the matron's first-aid is not to be despised. For does not the state of the stomach have its

influence upon the throat? Now, when I went to school, some fifty-five or fifty-six years ago, no one inquired what the food was going to be. Homes were simpler in food, as in other ways, and it was the same at the schools. Were we naturally hardier, tougher, less liable to break down? It may have been so. Consider how the modern parent would lift up his hands in dismay if the provisions of fifty years ago were to be considered adequate. There was, to begin with, school before breakfast. True, it often took the form of open-air drill, and mighty cold and dark it was in the autumn and winter. But there was no early snack before we began the day. It is, of course, true that boys won't, unless they are almost compelled, get out of bed in time for such things as cocoa and bread and butter, much preferring the five minutes' extra in the warmth of the blankets. But still, the food is provided, and the parent knows this. We had to wait until breakfast. Until we got into the sixth form, all that we had was bread and butter and tea. Mind you, both the bread and the butter were quite irreproachable and of the very best quality, but there was nothing else for us. It is always dangerous to be dogmatic about one's feelings and thoughts more than fifty years ago. But I have no remembrance of going away hungry from breakfast or thinking the food inadequate. The long three hours of work afterwards passed much as they do in every school. In the time before dinner those who had money enjoyed themselves at the pastry cook's hard by, either before playing some game or immediately before dinner, after the game was over; it made no difference to our insides. Dinner was meat and pudding: sometimes meat and bread and cheese, or soup and meat. There was always abundance of vegetables of various kinds. We were allowed two helpings of meat, but only one of pudding. The Doctor and the resident masters ate with us, and it remains with me a surprise I felt at, and the fascination there was in watching, the rapidity with which the Doctor ate his vegetables and pudding (he never touched the meat), while he talked without pause. As with the bread and butter, the quality of the food was very good and the cooking excellent; but how I should have enjoyed a second help of jam roly-poly! The only other meal was tea with bread and butter. Would a modern parent have been satisfied? I think not. Would a modern doctor have said that we were underfed? I think so. But I am sure that we were healthy and active enough. There were the usual strenuous games according to the time of the year, and there was bathing in the river. The latter was rather far off, and if you were a keen cricket-lover and wanted net practice with the professional you could not find time for bathing and net practice between the end of morning school and dinner. The result to myself was that I never learnt to swim.

One or two additions were made to the diet when you had got into the sixth form. At breakfast you had a slice of cold meat—usually beef—and (*horribile dictu!*) bread and cheese and beer for supper. Beer just before going to bed! But in those days it was the usual thing, and no one thought of milk as a substitute, nor that by all medical laws we were laying up a store of trouble in our developing manhood. It is worth while considering the above meagre diet. Was it adequate or not? I think we may certainly say that it would be quite inadequate nowadays. The rush and push and pressure which is the lot of every schoolboy now was unheard of. Everything was not competitive. There were oases of leisure in the cut and dried requirements of school life. It was easier all round. Both in school and out you had time to breathe. If the work was not well enough done in the classes below the sixth there were impositions or lines or hand-caning. The last is unpardonable, except that it was the common method. In this, at all events, we have improved. But even if your work or slackness involved you in punishment and some curtailment of the afternoon free time, it did not come to much in the total amount. No. There certainly was nothing comparable to the present-day high pressure. The modern schoolboy is harassed with examinations and the

thought that unless he can succeed in some competition or other his future is in peril. Out of school also, the organized—perhaps over-organized—games permit of very few loopholes. There is little time or opportunity for pause. The danger of pressing all into the same mould is real. It was not so two generations ago. Who shall presume to say that the one is all good and the other all bad? The resilience of boyhood is capable of very much more than the theorist or the ordinary medical man readily allows. We undoubtedly lost a great deal compared with the advantages which are now the commonplaces of school life, but I am not sure that we did not gain in independence.

Again, consider the holidays. They were not so long as now. There were but two halves instead of three terms. This in itself would be mentally and physically impossible now. Twelve or thirteen weeks are quite as long as any boy can stand the present pressure in school and out. The mind shudders at the idea of continuous schooling from January to June and from mid-August to December. There were a few days at Easter, but they were useful only to those who lived within easy reach; for we had few wealthy people among the parents to whom money was no object. But we are considering the holidays. They were certainly simpler. It may even be that they were spent at home. Supposing we were taken to the seaside for a fortnight, even there life pursued a fairly placid course. The bathe was the day's event and not over-prolonged. It was enough to enjoy quiet things quietly. But the real holiday was the time spent at home. Still, dull days perhaps, but there was the refreshment of the home life, learning to do little things for mother or sister, learning to understand a little what the father was giving up in order that we might have our chance at a decent school. It would be foolish and untrue to say that this is not to be found now; but there is a haste and a rush in home life as there is in school; and I sometimes wonder whether it can be good that young people should be always so hard at it and always on the go. Do they go back for a new term of work and all its pressure as ready physically and mentally as they ought?

There is one side of school life upon which I have said nothing—and that is what a schoolboy calls "Divinity"—and all that is thus represented. So far as school teaching went, my impression is that it was badly done. We hear now much about the boys being taught the Bible by those who do not believe it; and no doubt this does present a difficulty when the head master is drawing up his scheme of work. When I was at school this point hardly arose. Whether all the masters were believing and practising Christians, I cannot say, but there was nothing to show that they were not. Bible lessons were given throughout the school. In the sixth form I cannot recall anything but Greek Testament, and only the Gospels and perhaps The Acts (but of this I cannot be sure). Certainly I never "did" any of the Epistles. The Doctor always used Wordsworth's annotated Greek Testament, the edition of 1850. We prepared a certain amount, construed it, listened to his comments, and there an end. It was, I am sure, the least effective part of his work, and left little or no impression. If this were not so, I am sure there would remain something in the memory; and the contrast is great when compared with the *κρήματα ἐς αἰῶν* which were gained from the classical lessons. Anything further, such as the history of the Prayer Book or Church history, did not happen at all.

There were regular classes for the yearly Confirmation. The Doctor took us candidates all together for Catechism and explanation of the Confirmation service. Here also there was an incompleteness to modern ideas. A serious-minded house master of the present day would certainly consider our preparation very meagre. When the day for the Confirmation drew near the Doctor had us one by one into his study, and there was paternal advice and paternal inquiry, which we made use of or not. But very few, I imagine, took advantage of the opportunity. I myself was far too much in awe of him to feel anything but whole-hearted relief when the interview was over. This

was, of course, long before I got into the sixth and had learnt to understand the Doctor and his ways.

We had a school chapel: services, morning and afternoon on Sundays; celebrations once a month. Prayers in the schoolroom every morning. These are the bare facts in outline. I have clear remembrance that we really enjoyed the services in chapel, and sang the hymns, canticles, and (I think, but am not sure) the Psalms lustily and with a good courage. If criticism is legitimate upon the meagreness of "Divinity" teaching in general, let there be no mistake about the Doctor's sermons in afternoon chapel. He was a fine preacher to boys. I greatly doubt if he would be so considered at the present day. There was nothing cheap about his preaching. The sermons were written: the English of the finest and each sentence of the clearest. It must have meant a good deal to me at the time, for I can repeat the endings of some of his sermons after fifty-five years. In truth, the personality of the man came out here as it did in his classical teaching. The ordinary boy could understand. There was no trace of preaching down to a boy's level nor of elaborate writing. His sermons were just exactly suited to school life, full of knowledge of boys and attractive by the ease and grace of the language. But granted all this, it was the man who was preaching who made the impression. The clean-cut face, the impressive manner, the dominant personality. I remember one special idiosyncrasy. We boys were naturally always ready for a hymn with a good rousing tune. When any one of the head boys had sufficient courage he would petition for a hymn at the end of the afternoon service. Sometimes it was allowed: more often it was refused. When it was allowed it would be with but grudging consent. I can hear him now: "Oh, yes, have your hymn, and sing away all the good of my sermon."

It was a serious ordeal, as it ought to have been, when it was your turn to read the lessons. How we toiled at them beforehand! Well we knew who it was sitting at the west end of the chapel listening to and appraising our efforts. The Old Testament did not trouble us so much unless there were proper names. It was the second lessons which were the test. It may perhaps be granted that, at all events in the lectionary which was then in use, some of the Epistles were hard to be understood, and some hardly suitable for a boys' service; but there was no relaxation. A slip in a word, a mistake in emphasis, a blunder in construction—they were all noted. Lucky if irritation did not express itself in an audible kick of the hassock, but we knew that at "Divinity" on Monday morning our blunders would be pilloried and we should have to stand up, read the Greek, and explain where we had gone wrong. It would, I think, be true to say that the services in chapel represented a very real value in the week's adventures; and that they formed, as they should, a centre round which the school life circled.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

Be a New Year's Greeting borne to America, to the administrators of education there—to teachers in schools of all sorts, from the university to the little red school-house on its stony, hillside plot—to all who.

A Greeting.

with us, build hope for the world on Anglo-Saxon concord! Education can do much to establish and maintain harmony. Statists (to recall, with Browning, an old word) come and go, and political opportunism may, from time to time, trouble international relations. Education is a continuing force which may be directed steadily to the ends of reconciliation and amity. In his address to Congress on February 11, 1918, President Wilson said: "The power of the United States is a menace to no nation or people; it will never be used in aggression; it springs out of freedom and is for the service of freedom." Let it be taught in English schools that such words express the true mind of America. Let Britain resolve herself to the same intent, and let American schools

proclaim her resolution. So will there be built up and stayed a friendship the more beneficial to mankind in proportion as it is more intimate and more strong.

Looking back on 1921, we seem to have discerned in the United States a disposition to examine more critically than hitherto the values called "cultural" or "disciplinary." Boys used to learn Latin verses

by rote for the disciplinary value of the process—to improve the faculty of memory; it is now agreed that there is no general memory that can be improved in this way, nor will the memorizing of verses strengthen the power to remember dates or faces. It is asked—Are there not other cases in which subjects are being pursued erroneously for their disciplinary values as distinct from their practical utility? We cannot discuss the matter in a paragraph, and do but record a fact in illustration of a tendency. The Department of Education in the State of Ohio having ruled that an approved high school need not any longer require a unit of mathematics, the official who speaks for the Department made the following explanatory statement (*School Review*, XXIX, 9):—"It is not the Department's purpose to let down the bars on a formerly required subject simply because it is difficult, if it has universal value in the curriculum other than 'disciplinary.' On the other hand, it is not our purpose to hold any brief for a subject solely because it is difficult, with the idea that it is needed to 'steel' the mind. The notion of 'general discipline' and the old 'faculty' psychology die hard, in spite of the findings of all the best modern psychologists that ability acquired through the study of any particular subject does not spread itself and make for proficiency in various other subjects. . . . Our aim is not painless pedagogy or sugar-coated curriculums, but we are sure it is wrong to retain a subject merely because it will provide opportunity for mental gymnastics."

A playwright has denounced English education on the ground that it leaves its pupils unable to speak English. Whose English? Whose English? Innate courtesy may well lead a teacher to conform his speech in some measure

to that of those about him; and it were a sorry business to send a child home with the notion that his parents are vulgar because they speak the dialect of their parents. The Americans and we ourselves must be more tolerant of dialect. In France, M. Mazel is pleading that local *patois* should have right of citizenship in the school, and in the South it is found impossible to exclude Provençal. As to delivery—clear, forceful utterance—we are at one with American schoolmen; and incidentally we subscribe what is written in the *English Journal* (Chicago, x, 9):—"Every teacher, whatever his subject, should know the difference between syllabic utterance, which has doubtful value even in the spelling class, and free conversational form, which even on the platform to-day is more convincing than the meticulous care of a pedant; should know what weakened forms are universally allowed in cultured speech, what speech perspective is, how English treats double consonants, and how we should divide syllables for the best tone-production, be the etymology of the words what it may." Yet we are thinking all the time not of voice-management but of those utterances that convey unifying thought. They form the English for which we are yearning.

FRANCE.

A writer in *L'Ecole et la Vie* (v, 9) tells of certain "Essais d'Universités paysannes." Whether *université* in English and *université* in French—the two terms are not coincident—are the best names

for institutions that seek to help and enlighten untrained adults we do not stay to inquire; we do but borrow from the French journal some information about *universités paysannes*. They are not in Utopia, but in France—one in le Gard and one in les Charentes. It is with the latter that we will concern ourselves. It offers a series of ten courses to young peasants or other dwellers in the country who have completed the fifteenth year of life and will pay five francs down to be registered as students. The courses, ten in number, are spread over the months from October to July, and each course lasts one whole day, from 9 to 16 o'clock, the formal instruction being reinforced by conversation and debate. In the year October, 1919, to July, 1920, the subject studied was "Ancient Civilizations," the ten courses being these: October, Egypt; November, Assyria; December, The Geography and History of Greece; January, Homer; February, Socrates and Plato; March, Aeschylus; April, Pericles; May, Pheidias; June, Athens (Solon); July, Sparta (Lycurgus). Then, in 1920-21, "Rome and Gaul" were surveyed, with an analogous distribution of matters, and again in ten courses. It is intensive teaching, followed by a time of reflection and private reading. Here, for example, is the programme for October 24, 1920, when Italy was

being studied as the setting of Rome:—9 o'clock, The country, geography of Italy; 10 o'clock, The ancient inhabitants; 11 o'clock, Lantern projections to illustrate the geography of Italy; 13h. 30m., The old traditions; 14h. 30m., Primitive institutions. Then came a pause until November 28, when the Conquests of Italy formed the theme. As to the teaching, it is not of the dry-as-dust kind, but so designed as to quicken liveliest interest; thus a lesson on Rome was opened with the reading of the dialogue, all fire and pathos, between Attila and a Roman chief ("Légende des Siècles"): "Qui donc est là? La mer des hommes bat ta porte," etc. The peasants, who bring with them provisions for the day, attend gladly; and it is hoped that the stimulating example of les Charentes (Charente and Charente inférieure) and le Gard will find imitation in other parts of rural France.

In a later number of *L'Ecole et la Vie* (v, 10) M. Édouard Herriot argues in favour of the fusion of the higher primary school with the *école pratique*.

An Opposition to be ended.

Nothing more stupid, he says in introduction to his article, than the tradition that set in opposition technical scientific instruction and general education. "Toute notre histoire française proteste contre ce non-sens. Rabelais, qu'on vient de fêter et qui a contribué à fonder l'humanisme français, était un médecin fort attaché à sa profession. Si Descartes a donné sa conclusion logique au mouvement d'idées issu de la Renaissance, s'il a pu concevoir une théorie scientifique du monde hostile à l'esprit d'autorité, s'il a préparé toute l'œuvre du XVIII^e siècle et la doctrine du progrès par la raison, s'il a pu écrire le 'Discours sur la méthode,' c'est qu'il était, avant tout, un mathématicien. Blaise Pascal se forme par l'étude des sciences physiques; ses maîtres s'appellent Roberval et le Père Mersenne; avant d'écrire 'Les Provinciales,' il compose le 'Traité des sections coniques' et construit une machine à calculer. Voltaire ne devient vraiment actif et fécond qu'à partir du jour où il a compris la grandeur des sciences et pratiqué Newton."

GERMANY.

We give some miscellaneous intelligence from Germany, as fresh as we can serve it up. (i) Through the decline

Miscellen.

of the birth-rate during the war, the number of children in the Volksschulen has decreased, as it is estimated, by 24.5 per cent.—(ii) Among the books recommended by a committee for children of *six or under* is Dieck, "Schweinchenschlachten, Würstchenmachen," 24 M., the subject and the price being noteworthy.—(iii) On October 10, the Comenius Society, among the founders of which were Rudolf Eucken, Kuno Fischer, Friedrich Paulsen, and Wilhelm Rein, celebrated the thirtieth year of its existence. Next Easter, the Prussian Lehrerverein will celebrate its fiftieth.—(iv) There are many proposals for making by law November 9, the birthday of the New Germany, an annual holiday.—(v) In the *Frankfurter Zeitung*, Dr. S. Kracauer has been deploring the detachment of the German university, still the home of the exact sciences and manifold research, from current social and political movements.—(vi) As a consequence of the *Reichsgesetz über die Grundschulen*, girls can now be admitted to higher girls' schools only after a four years' attendance at a *Grundschule*, or basic elementary school.—(vii) Chemnitz begins in 1922 the system of supplying free school material—free exercise-books for writing and arithmetic representing the first step.—(viii) The Committee of the German Women Teachers' Union pronounces child-bearing by unmarried women teachers to be an offence for which disciplinary proceedings should be taken under § 10 of the *Reichsbeamtengesetz*.—(ix) In Berlin there are agitations to compel married women teachers to withdraw in favour of unemployed men and women teachers.—(x) Bogatzky's "Golden Treasury" is advertised (in a fifth edition) as a Christmas gift; it costs 22 Mk.

AUSTRIA.

The education of adults is always and everywhere needful, no man's education ever being complete; in England the delay to proceed with the Education Act, 1918, renders provision for the adult more imperative than it otherwise would be. It seems

The Vienna People's University.

to us that in this domain the World Association for Adult Education is doing good service. From the Association's tenth bulletin which relates to Austria, we jot down a few particulars about the *Volksheim*, or People's University at Vienna. Its foster mother was the University of Vienna. The building that houses it—in Ottakring, a crowded workers' district—contains a library, an amphitheatre for lectures, and a natural history museum. Among the students are clerks of both sexes, workers, teachers, goldsmiths,

coppersmiths, soapmakers, galvanizers, carpenters, mechanics, dressmakers, milliners, shop assistants and factory hands. They may study at will:—poetry, commercial geography, political economy, social politics, psychology (both theoretical and experimental), common law, history, the history of Austrian administration, drawing, designing and painting, stenography, mathematics, engineering, electricity, choral singing, French, English, Italian, Russian or Czech. English is a popular language and there is in the *Volksheim* a John Ruskin Club, which, until the outbreaking of the war, kept up a lively correspondence with the students of the John Ruskin College at Oxford. In 1919–20, there were 272 classes, with 10,496 students attending them, a growth exceeding even the wildest dreams of the founders of the People's University. The number of English classes was 11, with an attendance of 1,142, that of the French classes being 909, Italian 601, Czech 592, and Russian 70. Even for Latin there was some demand. In spite of the general depression the workers of Vienna show eagerness for education, and it is hoped that ultimately there will be a *Volksheim* in every district of the historic city.

CZECHO-SLOVAKIA.

The year was marked in the young State by the founding at Prag of an Institution for Experimental Pedagogy, with university courses for teachers, men and women, of all orders, who will find in it the

New Foundations.

necessary means for studying the science of education by the new lights. In this winter half-year courses of lectures are being delivered on philosophy, pedagogy, experimental pedagogy, pedology, and anatomy as a basis of physical education. The founders were the Czecho-Slovakian Lehrerbund and the J. A. Comenius Pedagogic Institute of Prag. If the new courses are successful, there is to be developed a Pedagogic *Hochschule*, which will realize Comenius's ideal of a Collegium didacticum. A similar institution was established at Brünn, and lectures began, as at Prag, on October 15.

QUEENSLAND.

In a spirit of fairness we publish the following extract from the *Queensland Education Journal* (xxvii, 6), remarking only that our esteemed contemporary might have worded its protest more daintily:—

A Repudiation.

"In a prominent British educational journal a learned professor, writing on 'Bias in History Teaching,' throws an undeserved brick at Queensland State education. He states that education is being prostituted for partisan purposes, and follows this with the gem: 'In Queensland a teacher has to form all his history teaching upon the doctrine of the sanctity of State prosperity. The prime object is to make intelligent and earnest Socialists.' While he was on the job, he might have mentioned that 'Socialism in Our Time,' 'Karl Marx,' and 'How to Revolute,' by Blowemupsky, are the only history text-books allowed to be studied."

NEW SOUTH WALES.

In New South Wales birds continue to be the objects of regard and study. The *Education Gazette* (xv, 10) publishes *Bird-Life* as a supplement, and October 28 was the eleventh Bird Day of the State.

About Birds.

It is the Gould League of Bird Lovers that protects the feathered world, one of its amiable purposes being to encourage the formation of bird sanctuaries. To dispel a popular illusion, we make a quotation from *Bird-Life*: "Adam Lindsay Gordon wrote of our 'Songless birds,' and Marcus Clarke alluded to 'the weird melancholy of the Australian bush.' These mistakes would never have been made if the authors had listened to the melodious notes of the harmonious thrush, the rapturous flute-like tones of the butcher-bird, the carol of the magpie, the brilliant whistling of the thick-heads, the delightful melody of the brown song lark, and the songs of many other Australian birds." Australia has representatives of every family of birds except two—the vultures and the wood-peckers.

LECTURE DEMONSTRATIONS FOR TEACHERS.—There has just been organized in London a unique series of lecture demonstrations for teachers. The courses so far arranged embrace "How to Teach English Composition," "Individual Work," "Music," "How to Tell Stories to Children," "Drawing," "Little Folk of Other Lands," &c. A few lectures have already taken place, and the whole series promises to be very popular. Teachers who are interested should write for full particulars to the Secretary, Lecture Demonstrations, Montague House, Russell Square, W.C.1.

PRINCIPLES OF RELIGIOUS TEACHING.

By the Ven. J. M. WILSON, D.D., Canon of Worcester

[Canon J. M. Wilson, formerly head master of Clifton College, delivered two lectures on "The Difficulties experienced by Laymen and Women in Teaching the New Testament in Secondary and Elementary Schools," at Worcester, November 29 and December 13. The full notes of these lectures were too long to be printed entire in our columns; but, at our request, Canon Wilson has sent us extracts which deal with principles. The second lecture was wholly occupied in answering questions sent him by the teachers (anonymously, by his request) after the first lecture. They dealt almost exclusively with theological questions of the greatest importance.—EDITORS.]

THE very recent publication of the "Departmental Report on Teaching of English in England" makes the subject of these lectures of obvious and urgent importance. That Report opens a new vista in education—new ideals, new methods. The consequences of the general and habitual reading of the Bible in our schools, which the Report recommends, are more than can be at once foreseen. The effect of the Report may be greatly to diminish the difficulties now felt in teaching the New Testament.

It is not generally realized, by either laymen or clergy, that the difficulties which have to be faced by a teacher in a school in teaching the New Testament are much greater than those faced by us clergy in our pulpits. We clergy can, and do, select the subjects of our sermons, and choose our own treatment of them. You teachers have the subjects of your teaching chosen for you, and your treatment of them is determined by the diocesan inspection. We select the subjects which we think of highest spiritual and moral value, and such as are also suitable to teach and inspire our special congregations, and within our power to handle. You have no such freedom. I want this difference to be fully realized: it is at the root of our difficulties and of much failure and distress. Let us clergy imagine the effect of a bishop prescribing the subjects of a vicar's sermons, and his archdeacon examining into our treatment of them and reporting on how little our congregations had learnt!

To put it otherwise, we clergy are called on to teach Christianity. You teachers have to teach the New Testament. How has this difference in the degree of freedom entrusted to clergy and that allowed to school teachers historically arisen? Is it still necessary or advisable? Is it not quite the reverse? . . .

It has in the past been taken for granted that verbal instruction in the New Testament is the best, if not the only, preparation in childhood for learning what Christianity really is. Of the origin of this assumption I shall speak presently. Suffice it now to say that greater freedom for the teachers to select subjects and treatment is indispensable for effective religious teaching. It has often been said that "the Arnold of elementary schools" has not yet appeared. How could he? In any new educational schemes let teachers look to it that freedom is found for many such men to do what Arnold did. And here I may say parenthetically that the opinion of you teachers is an increasingly powerful factor in educational matters. Hitherto battles on educational principles have been fought over your heads; battles in which party politics and sectarian interests have been the chief consideration. That has begun to offend the public conscience. The nation is beginning to "set the child in the midst" as the first consideration; and it looks to the teachers to tell us what is the true interest of the child. And we do not forget that the child of to-day is the England of to-morrow, and that to-morrow is very near to-day.

One great difficulty, then, in teaching the New Testament in schools at present is that the teachers, and especially the head teacher, who are the only persons in contact with the child, and who really know what is effective, have not been generally entrusted with freedom in the choice of subjects

and treatment of the moral and religious work of the school. This should, and can be, remedied.

And there is another general difficulty, harder precisely to define, but very real.

There exists an actual educational ideal, really inspiring most of the teachers, and ever renewed by contact with children; but it is no longer identical with that which centuries ago determined our present system, and still haunts us. That lack of identity which is hampering schools is apparently not realized by those who at a distance organize and administer the systems of both general and religious education in schools. The result is the absence of a high educational ideal, recognized outside the profession. The heart is thus taken out of teachers; their best work in character-forming is little understood; their efforts in the use of religious instruction for character-forming are first crippled, and then their results severely judged. The teaching of the New Testament will be at once less difficult and more effective when it has found its natural and inevitable place in a recognized educational ideal. . . .

Difficulties may thus in two ways be largely diminished; but difficulties are inherent in all religious teaching. They are inevitable in the attempt to introduce to immature minds the greatest thoughts. In such thoughts precision of definition is much desired, but is misleading, and is practically impossible. By no compromise or artifice can these difficulties be evaded. They can be best met by a true and high ideal of national education, firmly and consistently held by teachers, collectively and individually, and recognized by all education authorities, in which religious education finds a natural place; by the teacher's power to feel, and show in his teaching, personal sympathy with the immature and developing minds and souls of the young, and his full recognition of the difficulty and heroism of a Christian life; and by the teachers' freedom to adopt their own methods, carefully thought out, in the delicate work of fostering, by reading the New Testament, the varied intellectual and spiritual development of their scholars. A few extraneous and artificial difficulties can be diminished. But real religious teaching, the contact of soul with soul, can never be easy, or a matter of routine precisely defined. Personality is the dominant factor. And personality will grow and be multiplied when high aims are put before teachers, and they are granted freedom to work for them. . . .

Have we in England any conscious national ideal at all as to the part England is called on to play in world-history? It is a conscious national ideal which inspires and moulds a nation's educational ideal; and it is the body of teachers, through their educational ideal, which in its turn brings to realization the national ideal. Test that generalization by examples. . . .

Two things, believe me, stand out clear in modern history: one, that nations become factors in world-development through great ideals; the other, that it is mainly through teachers, through schools, that great ideals are planted in the homes and rooted in the nation's life. That is the unique position teachers hold in a nation.

Let us turn to England and ask once more, What is now our national ideal? our vision of the part England is called on to play in the world? Are we in truth only a nation of shopkeepers, content if only we make a profit? And will competition with other shopkeepers lead to periodic and ever more devastating wars? Our people are saying "No." Our great Anglo-Saxon race (for, of course, I include the U.S.A.) in these last years has found its soul, and is not ashamed to find it is Christian. It is realizing its place in the long development of human history, and its function as a chief agent in carrying out God's purposes in the world.

We have a national ideal. Our race is to be the home and example to the world of justice, truth, humanity, and ordered freedom; of reasonableness and tolerance; of patience and calmness and faith; of growing brotherhood and generous citizenship; of mutual service and mutual respect. Our national ideal is essentially Christian. It has

spiritual as well as materialistic ideals; and as part of both ideals it has the sense of self-respect and of vocation, which demands unyielding resistance to acts of aggression and wrong.

Observe that I do not say that such *ought to be*, but that such *already is*, our national ideal. It has been shown by the splendour of service and sacrifice, so modestly, unconsciously, given by those "glorious Englishmen" and women in the Great War. But it is unconscious, unformulated; very shy of calling itself Christian. If this ideal is to be propagated and enriched, if it is to become the conscious, explicit, and inspiring ideal and religion of young England, of the boys and girls who have not themselves passed through the fire, it must first be, what it has not yet become, the recognized and avowed educational aim of the teachers of England. We must, in a word, identify the conscious ideal of our schools with the highest actual ideal of the nation and the race.

That it has been, and is, the tacit and unavowed ideal of our teachers, I know. Under many difficulties, often with little discerning appreciation, they have done a great work in forming the character of the mass of England to-day. In these last years, as the Report I have referred to says, "Many who had been inclined to discount the elementary schools as factors in social and intellectual progress have discovered them to be a power in the land." . . .

The schools have been, as I said, hampered by the old and now inadequate ideal which gave them birth. We must not forget that the whole educational aim and systems of England were formed in the Middle Ages. They may be traced back a thousand years; and while subjects have been altered, its general principle, though now faintly discernible, remains the same. At least, no other has yet avowedly and authoritatively replaced it. The medieval aim and ideal was *to fit a child for membership of the Church*. That was the aim which inspired, promoted, fashioned education in England.

Let us first pause to remember that this was a grand ideal, incomparable. It civilized Britain. It created Christendom. It is our strength. It must never be abandoned; it must still be ours; but in an enlarged form. The Church is now something wider, larger than it was a thousand years ago.

For since the time of Charlemagne and the middle ages, our whole conception of this earth and of the universe has been immensely widened; and with that widening our thoughts of God and of man have also been transformed and raised: our conception of the sphere of work, both of our English nation and of the Church, and therefore of the fitting preparation of the young for membership of them, have also been transformed and magnified. Such preparation must now include the whole of the high and wide spiritual purposes which are animating us as a nation. Its methods also are changed: they must be determined by our increased knowledge of the science and art of education.

Our educational ideal has been too individualistic: it has been cramped by the limitations of the old ideal, and its methods of presentation. It has not made use of the new sources of power. It has in some degree become reactionary and obscurantist. As so often happens, the means which it at first employed have become the end. This limitation has been a source of many of the difficulties experienced in teaching the New Testament. . . .

England is, thank God, deeply saturated with the Christian spirit, though that spirit is largely latent, inexpressive, unconscious, till called out to act in some emergency. But it is there: you may rely on it. To find some adequate intellectual expression of that spirit, to devote oneself to its propagation, and urge it on others, is the absorbing aim of some of the noblest and best among us. Witness the amazing output of really good religious books. They have never been surpassed in quantity or quality. That work is a sign of the vigorous life, the militant quality, of the Church in England at this hour. Such writers and preachers and students may be compared with the Library of a university, that preserves our continuity with our long past, and with its Laboratory,

that is furnishing new means of progress in the future. Thus we teachers have on our flanks sincere Catholics, Roman and Anglican; no less sincere Protestants and Evangelicals; and the students of philosophy, criticism, history, science, who form the modernist school of method. In their work you as teachers of the young can take no part. For the mass of the nation (and all its young people) are neither Catholic nor Evangelical nor Modernist, but simply Christian, ethically Christian. It is incapable of abstractions and theories; it is perplexed by them, and it distrusts them. It has forgotten most of what was prematurely pressed on them at school. The truths it then learned stand in little or no relation to its religion. That central mass has its own very simple creed; but its heart is in conduct; its mind is directed to conduct. There, it is convinced, is the true sphere of the Spirit of Christ. That mass is silent; aloof, waiting, waiting for light. It is not hostile; it contains splendid material.

That central mass is your province, O teachers. Conduct and character, not creed, are your sphere. That is your great "national" Church. You are its priests and its prophets. . . .

Are you convinced that a great national ideal already exists among us, latent, unexpressed? that it consists of character, right action, an enlightened conscience, truth, justice, freedom, tolerance, humanity, kindness, and respect for others as for ourselves? And are you convinced that you teachers are the national organ, alone capable of impressing on all the youth of our country this national ideal? And are you also convinced, as you look at home, or at the East or the West, that the time has come for you to proclaim it as your ideal?

And do you also see, and this is the great thing to see through the mists that obscure the truth, the thing which all, I fear, will not readily see, that this is what Christianity, that divine mustard-seed sown nineteen centuries ago, has grown to and now is? Can any thoughtful lover of Christ gravely doubt that if our Lord were to revisit the earth, it would not be chiefly in the honour paid everywhere to the symbol of the Cross, not in our glorious buildings and services, still less in the creeds and the innumerable volumes of theological controversy about them, that He would see of the travail of His soul and be satisfied? Assuredly it would be in pious homes, in the growing kindly sympathetic and mutual service of myriads, millions, of our everyday folk; in the passionate resolve to humanize and spiritualize, at any rate for our children, all lives of necessary toil; in the acknowledged need of God's presence to purify and uplift human life. He would assuredly look with pleasure at our infirmaries and sanatoria, our open-air schools, and children's clinics, our boy scouts and girl guides, our service of the aged, the unemployed, the weak, the fallen. These are veritable churches, He would say, founded in My Spirit. Most of all, I think, He would rejoice in our schools; and in the continued sympathetic care and education of our young people who leave them, where it is shown. This is the actual living Christianity of our century and our country, embracing all ideals that have gone before, and wider far. It is in these He would see the fruit coming; the blade, the ear, if not the ripe corn in the ear.

Now it is to maintain and deepen this spirit of a divine humanity among us that wider and more intelligent teaching of the New Testament is, as I am sure, indispensable. . . . The inspiration from the Bible, which in our long past has created the truly Christian ideal in the nation—the duty of a Christian to his neighbour as a brother—is needed to sustain and advance that Christian ideal. The Bible seems to be dropping out of national life. But it is indispensable; it must, however, be better used, and the teacher must be set free and trusted to learn to use it suitably for his own powers, and for those of the child. . . .

The Departmental Report speaks (page 9) of "the vast importance of moral training"—urges that education shall be regarded as experience, and shall be kept in the closest contact with life and personal relations. All the "General Introduction" of that volume must be read and digested;

(Continued on page 20.)

MESSRS. LONGMANS & CO.'S LIST.

Modern Inorganic Chemistry.

By J. W. MELLOR, D.Sc. With 334 Illustrations. 8vo. 12s. 6d.

The book has been written from the modern standpoint, and, in consequence, the more recently established principles of physical chemistry have been woven with the facts generally taught in chemistry classes in Universities, Technical Institutes, and other Schools.

Introduction to Modern Inorganic Chemistry.

By J. W. MELLOR, D.Sc. With 232 Illustrations. Crown 8vo. 9s.

This book can be regarded as an abridgment of the author's "Modern Inorganic Chemistry," in a simpler dress, and it has been adapted to suit beginners in chemistry.

Higher Mathematics for Students of Chemistry and Physics.

With Special Reference to Practical Work.

By J. W. MELLOR, D.Sc. With Diagrams. 8vo. 21s. net.

A Text-Book of Inorganic Chemistry.

By G. S. NEWTH, F.I.C., F.C.S. With 155 Illustrations. Crown 8vo. 9s.

Manual of Chemical Analysis, Qualitative and Quantitative.

By G. S. NEWTH, F.I.C., F.C.S. With 102 Illustrations. Crown 8vo. 9s.

Intermediate Physics.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. With Diagrams. 8vo. 15s. net.

A Text-Book of Physics : Including a Collection of Examples and Questions.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S.

SEVENTH EDITION. Revised by HERBERT MOSS, M.Sc. (Lond.), A.R.C.S., D.I.C., Lecturer on Physics at the Imperial College of Science and Technology, London. With Diagrams. 8vo. 21s.

A Text-Book of Practical Physics.

A Book of Reference for the Student working in a Physical Laboratory.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. With 278 Illustrations. Crown 8vo. 10s. 6d.

Magnetism and Electricity. A Manual for Students in Advanced Classes.

By E. E. BROOKS, B.Sc., A.M.I.E.E., and A. W. POYSER, M.A.

With 413 Illustrations. Crown 8vo. 12s. 6d. net.

Electricity and Magnetism. For Advanced Students.

By SYDNEY G. STARLING, B.Sc., A.R.C.S. With Diagrams. Crown 8vo. 12s. 6d. net.

A Treatise on Light.

By R. A. HOUSTOUN, M.A., Ph.D., D.Sc. With 328 Diagrams. 12s. 6d. net.

Elementary Algebra for the use of Higher Grade and Secondary Schools.

By P. ROSS, M.A., B.Sc. Crown 8vo. Part I, without Answers, 3s. 6d.; with Answers, 4s. 6d.

Part II, without Answers, 3s. 6d.; with Answers, 4s. 6d.

Parts I and II, complete in One Volume, with Answers, 7s. 6d.

A School Flora for the use of Elementary Botanical Classes.

By W. MARSHALL WATTS, D.Sc. (Lond.), B.Sc. (Vict.), late Physical Science Master in the Giggleswick Grammar School. With 205 Illustrations. Crown 8vo. 4s. 6d.

A COMPLETE LIST OF ALL MESSRS. LONGMANS, GREEN & CO.'S BOOKS OF CHEMISTRY, PHYSICS, &c., WILL BE SENT POST FREE ON APPLICATION.

LONGMANS, GREEN & CO., 39 PATERNOSTER ROW, LONDON, E.C. 4.

and its last chapter on the Reading of the Bible. "It is no longer possible," the Report says, "to deprive our schools of the free and impartial study of the Bible." . . . What is "moral training," which is of such vast importance? An excellent little book about it is Bishop Gore's "Christian Moral Principles"; but the best definition of it I have met with is this: "To teach morality is to inculcate conduct which is in harmony with social needs and requirements."

Needs and "requirements," you observe; therefore it is a *duty* of the State. It is the interest of the State that people should not be idle, violent, licentious, &c. Such people are bad citizens. Laws forbid and magistrates penalize such conduct; reformatories try to amend such transgressors. But it is mainly to the schools that the State looks to diminish or wholly avert the appearance of such characters by training up the young in the habits, the virtues, and ideals which are the very opposite of these anti-social vices. This moral education has been, and is, going on in our schools. Our debt to the schools is very great. I have spoken of the way in which the character-forming is effected now in our schools. It is a result of the whole school atmosphere; its discipline; its community-life; its sense of duty and honour. School life demands social virtues; these are felt early, and the training in them is the best incentive to individual virtue.

Let me give an illustration of real moral education. Have we, even we teachers, fully grasped what the greatest living English educationist has already done in moral training by the power of a clear and true ideal? Does anyone doubt of whom I speak? Baden Powell of course. By his insight into the fine side of boy-nature; how out of their generous instinct for community-life, for mutual helpfulness and trust, for loyalty, kindness, the call to something heroic, the English boy finds his soul. It is the religion, the natural foundation of the adventurous Christianity of a boy, on which is built the firm Christianity of the man.

The natural foundation I say. And through failure to perceive this, much of religious instruction has not been so founded; it has been up in the air, detached from life, and vanishes when the children leave school. . . .

Religious instruction is shown by world experience to be necessary to consolidate and consecrate the results of moral training. For children, like the rest of us, find that they can resist the call of duty and honour. "Why," they ask or feel, "why should I do what I don't like?" Why? The teacher is driven to the idea of conscience: a faculty, remember, not very early developed in the individual or the race. Socrates was probably the first to isolate this characteristic human faculty and give it a name, though the prophets of Israel felt it. Conscience, that mysterious faculty, awakes in the child. "I ought," he feels and knows. And the next thought is, "And I can: but I have the choice. Shall I say 'And I will,' or 'But I won't'?" . . .

Religious instruction is to help the child to give the right answer. No one can summarize what it is in a paragraph; but the essence of it is that Conscience is the voice of God; it is the witness to us that we have a spiritual nature, our true nature; that we are linked thus with our Father in Heaven. Thus religious education reinforces and supplements moral. . . . Conduct must be fenced by strong negatives—*Thou shalt not*—grounded on the sum total of God's voice in the hearts of men of all ages. We picture Him at first as a Being remote and separate from us: we learn that, though we cannot know Him as He is, He speaks in the hearts of men. Then, of course, we go on to show how Christ taught the Decalogue, and how He put before men the difficult but heroic path of living the higher life, of purity, service, love. . . .

AFTER twenty-five years' service, Mr. Walter Macfarlane has tendered his resignation as Principal of the County Technical College at Wednesbury.

Long „ red, smooth „ Soft c and g, blue smooth.
Soft „ green, soft felt „

Price **£2. 2s.** (including book, case, and carriage paid).

Letters may be had on approval from—

C. HAYNES, 68 Boston Road, London, W.7.

TESTIMONIALS.

London County Council.—"You have obtained excellent results by
application of Phonic System devised by you."

H.M. Inspector.—"Your system seems to me to avoid the defects of the
— system, as it allows freedom of method to the teacher, and does not limit
the child to one set of reading books."

T. H. Elliott, Esq., Head Master, "Peterborough" L.C.C. School, Fulham.
—"A word of tribute to the excellent progress in Reading and Spelling made by
children trained in Haynes' Phonic Method is hereby heartily accorded."

Miss Luard, late Principal of "Whitelands," Chelsea.—"Your
system seem to me the best I have come across."

L.C.C. Head Infants' Mistress.—"Your letters we use daily with
excellent effect."

L.C.C. Assistant Infants' Mistress.—"I find the letters of great use.
They fill a long felt want and the children love them."

Principal of High School.—"I am getting splendid results from your
System and am quite charmed with it."

Head Mistress, Holder of Montessori Diploma.—"The Word
Garden Letters are excellent, being so interesting and durable. Children
love them."

Head Mistress, Rutherglen, Lanarkshire.—"I am more than
delighted with your Word Garden Letters. The children are taking more interest
in them every day."

PRIMARY SCHOOL NOTES.

Promotion under the Dual System.

ONE of the professional difficulties perpetuated by the dual system lies in the difficulty experienced by Council school teachers in securing promotion to headships in Church schools, although in many cases it is not impossible for a Church school teacher to be appointed as head teacher in a Council school. Proposals have been made from time to time for the preparation of promotion lists of teachers by local education committees, in order that suitable candidates may be suggested for promotion irrespective of their religious denominations and beliefs. Such lists have failed to become effective because voluntary school managers have always jealously retained their exclusive right of appointment; deprived of this they would lose a very valuable factor in maintaining the supply of Church school teachers. The increasing difficulty of maintaining non-provided schools in a sound state of repair appears to be causing the transference of assistant teachers from Church schools to Council schools, where, as a rule, the conditions of employment are superior; it also tends to restrict the choice of principal teachers for small voluntary schools in a marked degree.

Raising the Age of Admission to Schools.

THE suggestion that the age of admission to Primary schools should be raised to five years has been made several times in the past, and has always been severely criticized by those who have definite knowledge of the domestic conditions under which working-class families live. Where there are large families of the poorer class the alternative to the Infants' school is the street, since there are no domestic facilities for the nurture and education of young children. To allow children to run wild in the slum districts of towns until the age of five is attained would make the discipline of infant schools difficult to maintain. It would probably prolong the length of infant school life by one year; and this would automatically cut down the school life of children in the upper departments by a similar period. In effect, the school-leaving age of fourteen years would signify, in the educational sense, a leaving standard of thirteen years. The raising of the age for admission to secondary schools to ten years, is a policy which would find ready endorsement from all those who are cognizant of the difficulties of providing advanced courses of education for Primary school pupils.

The Recommendations of the Geddes Committee.

THE attempt made by a member of the Geddes Committee, prior to the issue of its report, to prejudice public feeling against education has acted as a tonic to all friends of our school system. The inclusion of all the expenditure of local education authorities with that of the Board of Education, and the public presentation of the total in such a form as to allow ordinary people to assume that the whole was paid from government grants, betrayed an anxiety for the reception of the Committee's report which augured ill for the stability of its conclusions. A further statement by the same member, that the Burnham scales were based upon the standard of living two years ago, was a misstatement of fact inexcusable in a business man. The case for a wise and expanding expenditure upon national education is so strong that those who are in touch with progressive opinion do not fear the result of the issues raised in the report of the Geddes Committee in relation to education. The various points have been so recently investigated by the national committee on retrenchment, that many people are already convinced that the proper body to make suggestions about economy in educational expenditure are those who have some intimate acquaintance with the organization and administration of education.

National Union of Teachers.

THE entire organization of the National Union of Teachers is now engaged upon the struggle to resist proposals to reduce salaries. A special committee of the executive has been formed to initiate ways and means of conducting the campaign. Reports from teachers' associations in all parts of the country betray an indignation at the suggestion of salary "cuts," which has seldom been equalled in the long history of the Union. It is clear that the recent drastic amendments made in the application of the Burnham scales are regarded by members as the limit of concession. There is an evident quickening of enthusiasm among all teachers in the justice of their case; and it is possible that many of those who recently left the Union owing to sectional differences will renew their allegiance in the New Year.

A. & C. BLACK'S HISTORIES.

By JOHN FINNEMORE.
SOCIAL LIFE IN ENGLAND.

Price 3s. each.

Vol. I.—Saxon Times to 1603. Vol. II.—1603 to the Present Day.

The aim of this Reader is to give a picture of the life of the people at different periods. It describes how they worked and how they played: how the great man dealt with the small, and how the small man made a living: what the people ate and wore, and how much they paid for food and clothes; what they got for their labour, and what they did with it. It is suitable for the upper classes of primary schools and the lower and middle forms of secondary schools.

By H. L. BURROWS, M.A.
STORY OF ENGLISH INDUSTRY & TRADE.

With 36 Illustrations. Price 3s. 6d.

This book is intended for use as a reader and text-book for the upper classes of primary schools and the lower and middle forms of secondary schools.

By EUGÈNE L. HASLUCK, B.A., F.R.Hist.S.

AN INTRODUCTION TO THE HISTORY OF ENGLAND.

Illustrated with 13 Sketch Maps. Price 3s. 6d.

This book is not a mere compendium of facts, although no event of cardinal importance has been omitted, but it deals with the chief aspects of English history more effectively than is possible in the usual type of text-book. It will provide the necessary background for the ordinary class lesson.

By M. W. KEATINGE, M.A., D.Sc.,
Reader in Education in the University of Oxford; and
N. L. FRAZER, M.A.,
Head Master of Ilkley Grammar School.

A HISTORY OF ENGLAND FOR SCHOOLS.

With Documents, Problems, and Exercises.

Price 7s. 6d.; or in Two Parts, 4s. each.

Part I.—55 B.C. to A.D. 1603. Part II.—A.D. 1603 to Present Day. The "Documents, Problems, and Exercises" are also published separately, in six sections, price 1s. 6d. each.

AN INTRODUCTION TO WORLD HISTORY.

Containing 21 Maps and 23 Illustrations. Price 4s. 6d.

By W. H. BARKER and W. REES.

THE MAKING OF EUROPE.

A GEOGRAPHIC TREATMENT OF THE HISTORICAL DEVELOPMENT OF EUROPE.

Illustrated with about 40 Sketch Maps. Price 6s.

This volume gives in a new form the essential features of European History, and is designed to meet the requirements of Continuation Classes and the higher forms of Secondary Schools.

By H. E. MARSHALL, Author of "Our Island Story."

A SHORT SKETCH OF EUROPEAN HISTORY
VOL. I.—FROM THE FALL OF THE ROMAN EMPIRE TO THE REFORMATION.

Illustrated with Maps. Price 5s.

This book is not intended to be a compendium of European History, but rather an introductory study recording in as dramatic a form as possible the events and influences which have had most effect on the general development of Europe.

Edited by H. CLIVE BARNARD, M.A., B.Litt.

With contributions by leading writers in each of the self-governing Colonies, in India, and in America.

THE EXPANSION OF THE ANGLO-SAXON NATIONS.

A SHORT HISTORY OF THE BRITISH EMPIRE AND THE UNITED STATES.

With 22 Maps, specially prepared. Price 7s. 6d. net.

The book is designed primarily for the Upper Forms of Secondary Schools, especially in connexion with advanced courses in "modern studies," and for candidates for history scholarships. At the same time it should prove useful in Evening and Continuation Schools, in Training Colleges, and for private students.

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE) (British owned)

DURING the CHRISTMAS VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the
ROYAL SANITARY INSTITUTE,
and is strongly recommended by Medical and other expert authorities.

It costs little and is easily applied. Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for
2 to 12 months, according to the traffic, not only during each sweep-
ing (without sprinkling of any kind), but also throughout all the inter-
vening periods — which is even of greater hygienic importance.

"Florigene" has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government
Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

Read, Mark, Learn, and Inwardly Digest

THE SEVENTH EDITION OF

ARS VIVENDI

(ART OF LIVING)

THE BOOK OF VIGOROUS LIFE.

By ARTHUR LOVELL.

ENLARGED by two new chapters, entitled "An International Problem" and "A New Spirit." For the first time a full account of the discovery of the respiratory use of the cranial air-chambers is set forth, accompanied by proof of the practical value of the new doctrine in general health, education and development of children, treatment of adenoids without operation, &c.

The "Ars Vivendi" books have secured the enthusiastic approval of some of the foremost men of thought and action in the world, have been eulogized by over 250 British and foreign papers, and are recognized as standard authorities.

EXTRACTS FROM SOME PRESS OPINIONS.

The Times.—"Containing practical advice on the development of mind and body."

The Saturday Review.—"Readers of Mr. Arthur Lovell are seldom disappointed. They know what they are going to receive, and they try to think as clearly and as variously as their author. He arrives in his argument at a race of Emersonian supermen and superwomen."

Viscountess M—writes in 1921:—

"I can testify to the fact that twenty years ago your book 'Ars Vivendi' revolutionized my life, and has been a great help to many of my friends."

University Tutorial Press.

MATHEMATICS AND MECHANICS.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers. 4s.
"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association.*

Algebra, School. By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 7s. 6d.
"An excellent production which should win for itself wide and permanent recognition. The chapters dealing with graphs are excellent."—*Schoolmaster.*

Algebra, School (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 6s. 6d.
"As a school text-book this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette.*

Arithmetic, The Tutorial. By W. P. WORKMAN, M.A., B.Sc., late Head Master of Kingswood School, Bath. Third Edition. With or without Answers. 6s. 6d.
"Designed to supersede all other secondary treatises on the subject."—*Westminster Review.*

Arithmetic, The Junior. By R. H. CHOPE, B.A. Third Edition. 4s. With Answers. 4s. 6d.
"No better arithmetic for school work has come into our hands."—*Scottish Educational Journal.*

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc. 4s. 6d. With Answers. 5s.
Adapted from *The School Arithmetic* for the Oxford and Cambridge Senior Local Examinations.
"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World.*

Arithmetic, Rural. By Dr. A. G. RUSTON. 5s.
"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education.*

Book-keeping, Practical Lessons in. By T. C. JACKSON, B.A., LL.B. Fourth Edition. 5s.
"A well-arranged and well-explained treatise."—*Educational Times.*

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. 4s.
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc., F.C.P. Second Edition. Enlarged. 6s.
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World.*

School Geometry (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 5s.
Covers fully the syllabus for London University Matriculation.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. Second Edition. 1s. 3d.
"The explanations are remarkably clear."—*Secondary Education.*

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. Second Edition. 4s.
"An excellent text-book."—*The Journal of Education.*

Mathematics for Technical Students, A First Course in. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. Second Edition. 3s.
"The authors have succeeded in creating a 'workshop atmosphere' around this elementary course."—*Nature.*

Mathematics for Technical Students, A Second Course in. By P. J. HALER, M.B.E., B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. 6s.
A course of work in Mathematics suitable for the second and third years' work on lines similar to the First Course in Mathematics for Technical Students by the same authors.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. 4s.
Mechanics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. Fourth Edition. 5s.
"A practical book for this subject. It will be found exceedingly useful."—*Educational News.*

Trigonometry, Junior. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. 4s.
"The examples given are numerous in each chapter, the diagrams and the arrangements practical."—*Secondary Education.*

BOTANY, CHEMISTRY, PHYSICS, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. 4s.
"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*
"Combines observational and experimental work with text-book instruction in a judicious fashion."—*Preparatory Schools Review.*

Botany, Senior. By FRANCIS CAVERS, D.Sc. Second Edition. 6s. 6d.
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature.*

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. Second Edition. 4s.
"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine.*

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 6s. 6d.
"The ground is well covered on experimental lines. There are questions to every chapter, and a section on chemical calculations."—*Guardian.*

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. 4s.
Including preparation, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. 3s.
ADVANCED COURSE. 1s. 9d.
"The calculations which are inseparable from chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge.*

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. 3s.
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. Second Edition. 5s.
"The information is accurate and up to date."—*The Journal of Education.*

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc. Sixth Edition. Revised and Enlarged. 4s.
"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster.*

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.
"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. 5s.
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature.*

Mechanics and Physics (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. 2s. 6d.
"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Educational News.*

Science, Junior Experimental (Physics and Chemistry). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 4s.
"The explanations are clear, and we can recommend the work heartily."—*Secondary Education.*

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. 6s.
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature.*

Sound and Light, Junior. By R. W. STEWART, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 4s.
"Reaches a high standard, with plenty of practical work."—*Guardian.*

INTRODUCTORY.

By Prof. JOHN ADAMS.

WE teachers are a conservative folk, and, as a rule, we are disinclined in our daily practice to seek out novelties. Perhaps it is inherent in our profession that this should be so. To be sure, the educational magazines seem to give the lie to such a contention, for they are full of descriptions of new plans or of old plans suggested for revival. It is perhaps natural for the general reader who dips into educational literature to go away with the impression that our schools are living in a giddy round of innovations. We talk glibly about the new education and the new teaching, and with justice, for there is undoubtedly a somewhat unusual stirring of the dry bones at the present moment. But those who are greatly concerned about the resulting general disturbance are giving themselves needless trouble. Taking the profession as a whole, it stands far more in need of stimulation than of repression. Let it be conceded that this conservative bias has its useful side. There is a real danger of cranky and freakish persons upsetting the staid and steady progress of our schools. Something may well be said for teachers who soberly and intelligently question the value of all the new suggestions, even if the questioners betray an unmistakable preference for what they complacently call "the good old grind."

So long as the conservatism of our craft confines itself to a jealous scrutiny of the claims of innovators, it is all to the good. Even the most enthusiastic would-be educational reformer cannot but feel sympathy with the attitude that regards the teacher and the pupils as the very essence of the school, and all the rest as more or less negligible appendages. Most of us are pleasantly impressed by the American

definition of an ideal university as a log with Mark Hopkins sitting at one end and a student at the other. But, in practice, the simplicity of this lowest common denominator of schools is unattainable. Even the most conservative among us admit the need of a decent building, comfortable classrooms, and an irreducible surd of apparatus. Seats and desks, inkpots and pens, a blackboard and a few maps are now demanded by all, though there are not a few who regard anything beyond these as somewhat of the nature of superfluities. Even these beggarly elements are sometimes regarded as being supplied in excess. President Wirt, of Gary, for example, scoffs at the idea that in the school there must be a seat and a desk for every pupil. There is no more need for this, he contends, than there is to provide every citizen with a seat of his own in the public park.

This self-denying tendency has been set forth here in order to help us to reach the minimum amount of aid in classroom work that may be regarded as essential or, at any rate, primary, so that we may go on to discover where to begin with aids that may fairly be classed as supplementary. Let us agree, then, that whatever furniture and apparatus are essential before the school can be carried on at all are primary, and that whatever is added thereto for the purpose of increasing the efficiency of the work is entitled to be called supplementary. Here the conservative teacher is inclined to join issue at once, and to maintain that a great many of the recent *faux-pas* may tend to the pleasure of the pupils, and perhaps to the ease of the teacher, but have nothing to do with the efficiency of the school. The "good old grind" is once more at grips with its ancient adversary, "the primrose path," and the tiresome old quarrel glows afresh. We are told that it is not the teacher's business to invent machinery to save the pupils from having to take trouble: rather we should spend our time in seeking out ways of making them take more trouble. But this is precisely what a good many of the new plans seek and attain. Their general aim is to enable the pupil to make the best use of his own powers, to help him to reach the best results with the minimum waste of effort.

The writers of the series which the present article introduces will supply abundant illustrations of all manner of supplementary aids in the different subjects that they treat. Some of these will necessarily be referred to here in illustration of the general principles of supplementary aid, but the detailed treatment must be left to the specialists whose work will follow.

A preliminary broad distinction may be usefully drawn between aids that take the form of apparatus and those of a more general character. While conservative teachers are strongly suspicious of all manner of supplementary aids, they keep a reserve stock of suspicion for anything involving special apparatus. The suspicion is certainly not unjustifiable. It is a safe maxim, even for the progressive teacher: "Put not your trust in apparatus." But it is carrying good advice to a dangerous excess when we ban apparatus altogether. The teacher is not called upon to make a crutch of apparatus, but merely a staff. So far as we are concerned here, it is to be treated merely as a supplementary aid. We are thus freed from the most insidious form of apparatus temptation, its tendency to pass from servanthood to mastership. This tendency is marked in all the systems that demand a special set of apparatus. We need not wander into the disputes raging round the kindergarten apparatus and the Montessorian. Examples are to be found every day wherever we have teaching material that can become standardized and authoritative. As soon as the teacher finds himself being dominated by the illustrative material that he uses he is in danger, and ought to take thought and mend.

Strong as is the tendency to yield to the seductions of the apparatus suggested by another, there is a still more powerful temptation to yield to the blandishments of our own, poor thing though it be. Whatever we have found out for ourselves, naturally and properly has a special attraction for us. Further, we can get better results out of an inferior

plan or piece of apparatus that has been invented by ourselves than from another that may be intrinsically better but comes from without. All the same, the teacher cannot afford to let even his own inventions become his masters. Fortunately there is a tendency in human nature that works against the permanency of such plans or apparatus. The creative instinct is strong, even among teachers, and once a bit of apparatus has suggested itself to our mind we have the natural stimulus to carry out our idea by producing the actual object. This often implies long and sustained effort, much experimentation, frequent failures. The creative instinct hounds us on, however, till success is reached, and then in many cases a reaction sets in. We very soon become bored with what we have produced. In spite of the loving care expended on its making and perfecting, it fails to maintain sufficient interest to carry the teacher over the dreary period of the monotonous application of his invention. The work of such inventive teachers, however, is not wasted. The spirit developed in the process of inventing and developing the idea, and in giving it concrete expression, is in itself a valuable asset; and in many cases the actual piece of apparatus is passed on to less ingenious, but more pedestrian, teachers who bring out of it all of which it is capable. Not nearly enough is at present made out of the possibilities of interchange among teachers. One of the less laudable supplementary aids during the bad old times when schools all over the country had to prepare for the same external examinations, was the interchange of "tips" of all kinds among schools sufficiently far apart not to regard themselves as local rivals in the way of successful examination results. What used to be done for a somewhat tainted end should be done in the interest of sustained stimulation of genuine educational ideals. A teaching device or an ingenious piece of apparatus may have exhausted its mandate in one school, and yet be a welcome stimulus in another. For a school may become immune to the good influences of a much used supplementary aid, just as a given organism may become immune to the evil influence of a bacillus to which it has been for too long exposed.

There is a further obstacle in the way of developing material supplementary aids to teaching. This consists in the difficulty of finding storage room. A few inventive spirits on a school staff, aided and abetted by one or two who are "men of their hands," will in a few years produce such an embarrassment of riches as to make the housing problem a professional as well as a domestic matter. Here again relief is to be sought in a judicious system of exchange, or even of free gift. Many items of teaching material are required only at a certain period of the school year, and all the rest of the time they may be profitably on their travels among friendly schools, returning annually to the parent institution for their term of service. Everything in the way of graphic illustration is peculiarly amenable to this treatment. Maps, charts, diagrams, rough but permanent pictures, accumulate with alarming rapidity; but, on the other hand, they are easily packed and can be sent to a distance at comparatively small cost.

The mention of outlay suggests the unpleasant consideration that at present it is usual for the teachers themselves to bear the expense of any supplementary aid that involves materials. It should be recognized as a general principle of school administration that certain materials should be placed at the disposal of the staff as a part of the regular routine. At present, in many cases, multifolded appliances are treated in this way, with gratifying results. But, in addition, there should be a sufficient supply of large sheets of paper, and a set of stencils, or preferably a set of blocks of type in white rubber, which enables the teacher to produce with the minimum expenditure of time, a printed sheet for class use in any of the school subjects. Every school should have an optical lantern as part of its ordinary equipment, and it ought to have that arrangement by which actual drawings can be made on the spot and thrown on the screen as they proceed. We will be told, no doubt, that many teachers are incapable of using such material as we have

been describing, and it has to be confessed that there must be a certain correlation between the demand for material and the ability and willingness of the staff to use it. For we must not blind ourselves to the fact that not all teachers are either able to manipulate extra apparatus or willing to take the additional trouble involved. But the principle should be accepted that the material must be available as a matter of course, wherever a demand for it exists. The inevitable progress in educational efficiency, fostered by the desire of all heads to have the best work from the staff, will ensure that, in most cases, really serviceable apparatus once introduced will not be surrendered to more enterprising schools. Even teachers who do not greatly believe in certain pieces of apparatus are unwilling to have them transferred to another school that appears to be able to make a successful use of them.

But supplementary aids are not to be sought merely among the "base mechanical" elements that are usually included under the name of apparatus. Help may be brought to the classroom without the intervention of anything material. A slight change in the point of view from which a subject is regarded is often a valuable stimulus to renewed interest and good work. It is here that the old-fashioned conventional teacher appears at his worst. His tendency is to make of his classroom a place apart. The school and the world are treated as if they had no relation to each other. I am told that the Germans have a proverb—though I have not myself met it in Germany, but only in English textbooks on teaching method—"The school is good, the world is bad." It is usually quoted in illustration of the argument that there must be some sort of resemblance between the school moral standard and the ethical standard that obtains in the outside world. But not in religion and morals alone must there be established a working relation between the classroom atmosphere and that of the outer world. In all the subjects of the curriculum school life and what is suggestively called "real life" must be kept in touch with each other. It must not be forgotten that pupils are sent to school not to avoid the experience of life, but in order to prepare for that experience. This preparation is naturally itself an experience. In fact, it is sometimes maintained by writers on education that the school is merely an institution in which experience can be had in a particularly intensive form, and that unless the school can provide this experience in a more condensed and easily applicable form than can be found in the outside world, there is no justification for the existence of schools at all. Something like this underlies Prof. S. S. Laurie's whimsical plea to extend to the rich man's children "some of the advantages of the gutter." The call here is not for purely vocational training: no narrow utilitarian aim is presented. All that is claimed is that pupils should be led to see the meaning of what they are doing in school, and, above all, to realize that there is a definite connexion between what is done in the classroom and what will happen to them in the rough and tumble of life.

For example, one of the best supplementary aids in the teaching of arithmetic is to give the pupils such problems in numbers as have a bearing on real life. All the preposterous problems that contradict the pupil's experience must be rigorously excluded. When Prof. T. P. Nunn gives a course of lectures on "The Arithmetic of Citizenship" he is putting the subject in its proper educational position. It is not a subject that should be confined to academic problems invented to illustrate the abstract qualities of number—though that, of course, has its place—but a study of the quantitative aspects of experience. One of His Majesty's Inspectors of Schools has just spent a happy year in trying to find out, from the pupils in the higher classes of the schools in his district, whether their brothers and sisters now at work are making any use of the advanced parts of arithmetic that they studied at school. He has not succeeded in finding any that have used "Stocks" in a real office, except in one case, which, when investigated, led to the office of a seedsman whose clerk did deal with stocks, but of rather an unarithmetical type.

It is a mistake to suppose that teachers are all blind to the need for keeping the school in touch with real life. We do not in this country go so far as is done in the United States, where, at Gary, in Indiana, the chemical analyses of the water of the city are made by the members of the senior chemistry class at the high schools. The work is perfectly simple, and quite within the powers of the pupils. It does not really save much of the time of the city analyst—who, by the way, was the teacher of chemistry in the high schools at the time the last report reached us—but it is useful work and, above all, has the quality of making the pupils do something with the knowledge they possess, something that really counts, something that is a part of civic experience. A little less academic, but perhaps no less appropriate to the situation, is the duty laid upon the young chemists to test the purity of the various candies and sweet drinks supplied in the city shops.

There is here, of course, the danger of mixing up out-of-school experience with the intensive experience that it is the duty of the school to supply. It is quite possible that an extension of the Gary idea might result in the school work becoming merely a slightly better regulated everyday experience, such as is within the range of all the members of a community. We must not fall into the fallacy suggested by the Dickensian correlation between the spelling of "window" and the cleaning of a window. We must not sacrifice the intensive experience for the sake of the added interest of actual contact with real life. It is the business of the school to combine both advantages, and the thing can be done if sufficient freedom is left to the teachers. For example, the plan of combining bookish instruction in dramatic literature with the actual presentation in the theatre commended itself to the progressive teacher. The plan of taking pupils to see at the theatre the play they are studying in the classroom originated with the teachers, and it would be well if the critics of our overbookish education would note that in this case, at least, it is not reactionary teachers who are at fault, but the law-makers and the law-interpreters. No doubt the judges who have given a decision that makes this supplementary aid impossible in the elementary schools are freed from the charge of educational obscurantism, by the fact that they express no opinion on the educational aspects of the case; but merely declare that theatres are not "places of educational interest" in terms of the Act.

By good luck the opinion of the judges has not had to be evoked on the educational value of meadows and streams, so the school journey—both long and short—is still available as a supplementary aid, and full advantage of this liberty will, no doubt, be taken by those who have to deal in succeeding articles with Nature study and geography. Modern language teachers are beginning the self-denying work of taking over a group of boys to France or Germany during the vacation. The system indeed shows a tendency to develop on wholesale lines, for at least one school last year had a camp in France for over a fortnight, at which more than two hundred boys had a good time that was certainly not without educational advantage. That compound of elementary science that Huxley named physiology, offers special scope for out-of-classroom applications. The manipulation of the rain-gauge, the record of the varying shadows cast by the noonday sun, the plotting out of the course of a thunderstorm down the valley in which the school stands, all imply out-of-door work that can be correlated in the most satisfactory way with the indoor work of the school.

Fortunately museums and libraries are now officially recognized as places to which visits may be paid during school hours by even the pupils of elementary schools, and the plain citizen is getting accustomed to the crocodiling of youngsters on their way to "places of educational interest." The secondary schools have, in the meantime, much more freedom in this matter so far as legislation is concerned, but there is the growing difficulty of the complex time-table. Where the teacher is convinced of the value of any out-of-

school piece of work there is little danger of restrictions coming from above, so long as moderation is observed. The succeeding articles will put the possibilities before the teachers; it will be for them to convince their authorities of the desirability of making the necessary applications.

When it comes to the actual conducting of work in the classroom there are still other supplementary aids in the way of modifications of current methods. All the play-way suggestions, and the appeal for differentialism and other modes of class disintegration, are of the utmost importance to the individual teacher. Decisions in this department are being called for daily, and the puzzled teacher is in need of guidance. It is highly desirable, therefore, that all the possibilities of the case should be fully explored, and the editors of this journal have deserved well of their readers by planning out the series that will place the views of the experts at the disposal of all whom it may concern.

THE ACADEMY OF LABOUR AT FRANKFORT-ON-THE-MAIN.

By EUGEN ROSENSTOCK, Principal.

ON May 2, 1921, the Academy of Labour in the University of Frankfort began its first term. As regards organization, it is an innovation, for it has arisen as a special institution, carried on by the joint action of the State and the trade unions. In its internal construction, also, it is faced by new educational problems.

It is still uncertain whether the Academy will survive permanently, and whether there is a determination among all concerned to take this bold step into the unexplored lands of the spirit. For it has been taken with a view to the distant future, just because in our present position we see only too plainly the helplessness of a hand-to-mouth policy. It would, therefore, be over-bold to speak yet of the successes and achievements of the Academy, or even of fixed institutions; and so, although its director perceives certain forms as granite pillars in the new erection, yet, for the present, we will speak to the educational world outside of only the concrete educational tasks and problems which the Academy has set before itself. These arise from the immediate need of the hour to build into our public university life two different phenomena, which are to-day coming to maturity: on the one hand, workers' education, and, on the other, liberal popular education.

No such building has yet been accomplished in Germany. It is true that liberal popular education is to-day reaching its consummation in the people's *Hochschule*—about which there are still lively disputes. The education of the workers is to-day finding its outlet in the works council schools and in institutions like the Münster trade union courses created by Plenge; and, on the other hand, in the schools and courses set up by the various labour parties. But neither set of institutions gives full play to that political force which at the present time supports the established order even more than the works councils and parties: we mean the force innate in the trade unions. For this reason more must be aimed at than the promotion of workers' education on the one hand or liberal popular education on the other. The trade union force must be built into the university life of the people.

This is precisely the task of the Academy of Labour. But such a new branch of school and educational life is not established until it comes to represent an essential part of popular educational life, indispensable to other sections of the intellectual community; until, therefore, it not only satisfies certain requirements arising from the daily needs of the worker, but also appeases the yearning for complete intellectual equality with other sections of the community which have hitherto enjoyed educational privileges.

The Academy of Labour, then, is to help the adult worker

to win educational equality with those who have hitherto been his intellectual superiors; its business is to enable non-academic persons to receive university education.

Hitherto we have had an absolutely rigid educational system, deficiencies of school education in childhood being regarded as irreparable. The first twenty years decided almost irrevocably the official educational status accorded by society to the individual. This rigid system, due less to abuse of money privilege than to bureaucratic helplessness, is being broken through by the worker, whose burning zeal for education attacks the deficiencies of youthful teaching with fierce energy, and whose earnest striving for education puts so many "educated" people to shame.

These being the conditions throughout wide circles among the working classes, the forces do doubtless exist which will win intellectual equality. But it is also beyond question that such equality will not be gained by the worker becoming a university student later in life. Imitation of this kind would by no means lead to equal rights, for the university exists primarily to train students for the professions and for scientific research. It produces specialists of high attainments, destined for intellectual callings, just as in the workshop apprentices are trained for particular manual tasks. For this reason, the eager worker must be specially warned against an imitation of that educational course. For it must, of necessity, starve his best intellectual powers, those applied to politics, by its theoretical methods of detailed analysis. The individual without a university education cannot even hope for improved prospects in his career from university study. The people, as a whole, would inevitably come to grief, intellectually and economically, through such an additional flood of *intelligencia*.

The Academy of Labour is therefore called upon, not to transform the man who stands in the midst of the struggle of life into a future official or theorist, but to leave him outside struggling with realities, and to give him the opportunity during a year of leisure of a deeper intellectual life, such as has been denied him since his fourteenth year. Just as the university man is nourished all his life by his period of study, however fast he let it slip by, and draws from it the lasting power to master his everyday tasks, so to-day the non-university man needs such a period in which he may look at his own mind, survey his intellectual energies, and reflect on the task which life has set him.

The course of study must, therefore, be regarded as an interval in which foundations are laid in the life of the adult. It follows—strange as it may sound—that many will receive their strongest impression during the holiday which lies between the two terms. For this holiday month of August is no ordinary period of leave, but a month of intellectual repose between two periods filled to the brim with study; it is the first of its kind in the life of a member of the academy.

The central educational problem—to provide a period of deeper mental growth—is specially illuminated from the standpoint of the holiday. The whole elemental power of mentally active leisure may be felt. But during the term intellectual life assumes fixed shape and so enters the period of study, making demands and helping onwards. The living and fruitful spirit assumes, in particular, two forms—personalities and institutions. Both exceed the wisdom of books, and so the academy student must approach both. He must see, hear, and talk with those who are responsible for and interpret science and the institutions of the State and of civilization at their labours. The student must not receive these impressions dumbly, for that aspect of the masculine spirit which these students represent is struggle; sharp criticism, spirited discussion, the extreme of resistance, must characterize intellectual debate in the academy.

Whilst appreciation of intellectual quality is thus sharpened, this world of intellectual phenomena must, at the same time, be clearly ordered and analysed; otherwise it would become a mere passing kinema film. These phenomena may be divided into the science of society, on the one hand, and the science of the individual, on the other. Law,

economics, and politics belong to the theory of the laws of society. The science of working humanity (biology, the science of labour, and the psychology of work) belongs to the science of the individual, as does also the study by means of intellectual training, on the one hand, through literature and the Press; on the other, through scientific theory of how natural man is placed in society. The connexion between society and the individual, the secret link between these two poles of all human institutions, must be touched upon in single lectures.

But that unity is to be discussed in a special course in the final month as history. A fundamental difference from the university is that history is here placed at the end as a special method of representation. It is, indeed, quite in accordance with the prophetic demand of Schelling, who asked historic records of mankind, not as the first, but the final, stage of knowledge. Hitherto our work has been devoted to the science of society, and we are just about to solve the difficult problem of making clear to the minds—often quite untrained in analysis—of our hearers the plain and unmistakable boundaries which divide law, political economy, and politics. In the second term we shall need the help of the administrative authorities, who are to admit our students singly to voluntary work. The schools, the Government, the city administration, the judicial authorities are those particularly concerned. In addition to this continued training in sociology, there are to be special seminars for political economy in the second term.

The unity of the intellectual training must be ensured—a difficult problem in the case of seventy-five mature men with their conflicting interests. Hence the institution of work in groups. In each seminar of twenty-five students one of the full-time lecturers works through a unified scheme for eight hours each week. The work in groups is the soul of the academy. Each group is quite free in its development. Here the individual tells of his experiences, brings his judgment to trial, and tests the clearness of his comprehension. At the present time three groups are at work. And it is of interest to note that every lecturer makes use of his lectures on political economy as a foundation for the systematic discussion of questions in his group, but each does this in an entirely different manner.

The group ensures unity in the course of study, whilst the lectures are deliberately subordinated to it, and often only occupy three to six weeks, very seldom continuing throughout the term.

In addition, there is the work of free study circles, held on a week-day without lectures; here the pupils study and discuss questions which they themselves have raised in free co-operation. Here the independent activity of the students is called forth. And though many passed a sceptical judgment at first upon this unregulated work, yet appreciation of it has grown with the lapse of time.

Almost all the lectures are accompanied by discussion, and already there is a great advance in the quality of questions put and the capacity for discussion. It need scarcely be observed that the students do, and can, ask of the lecturers that they should speak without close adherence to notes, since they are to present their knowledge personally, man to man and face to face.

It has already been stated that for the programme of the second term the help of the administrative authorities is anticipated. If we succeed in securing it, then the first three months will be properly described as a course of instruction, and the next four as a course of active work. The last weeks will then receive the character of a final course in such a way that the students will, on their own responsibility, criticize what they have experienced during the course of active work.

A second problem, yet unsolved, must be mentioned, one which jeopardizes the full effectiveness of the academy. One academic year begins on May 1 and ends on the following February 15. This period of eight to nine months is a rather one-sided compromise between two years, which

the university proposed, and four months suggested by the trade unions. The students feel the shortness of the course as a serious evil, and wish for its extension. On the other hand, there is a great danger involved in extending the period, for students have to find their way back into practical life. Moreover, the lecturers cannot be deprived of a university vacation without lowering the value of what they can accomplish. It is the students themselves who realize now only too well how necessary long holidays are for the lecturers' own work.

If the visions of the founders of the Academy of Labour come to fruition, every individual student who is wisely chosen by his trade union will receive an education which will teach him to see with the eyes of the spirit, to distinguish between individuals and the mental qualities of individuals, and to see and grasp intellectual order—powers which are the essential result of all education. The academy will thus develop the powers that university studies develop, and specially the power of acquiring knowledge and judging, which is independent and not derived from any other educational institution. In this way the old educational privileges will be broken down, for new privileges will be created, competing with the old, and these will be recognized and even sought after by other classes. That, too, is the reason why there is not in Frankfurt an academy for workers, for that would be a derivative, second-grade academy; but an academy of labour that is a fundamentally new creation, indispensable to the people as a whole, which will not merely assimilate a few ambitious individuals to other university men, but which will be built up, by the whole working class as such, as a university springing from the strength and the needs of labour.

INTELLIGENCE TESTS IN A GIRLS' COUNTY SECONDARY SCHOOL.

By Miss E. M. HUGHES.

LAST July all the children in the school who were above ten years of age—i.e. about three hundred—were examined by means of Terman's Group Test of Mental Ability.

A.—THE METHOD PURSUED.

The children were examined in relays in a large room, capable of holding from fifty to seventy girls. Pencils only were required, and a copy of the test paper, consisting of a sheet of questions and problems with a space left for the answers on each sheet, was placed before every child after she was seated at her desk.

The work was done during school hours, and went on throughout two school days, H.M. Inspector being previously informed of the necessary departure from the school curriculum.

The correcting is simple, but arduous. In this case it was done out of school hours by members of the staff who volunteered help. It took over a week to accomplish, as there were some three thousand sheets to be dealt with and checked. Key answers are obtainable with the tests, and were used throughout.

There are no norms for these particular tests, but an average mark can be obtained for every age in the school—e.g. from the results of all children between the age of eleven and twelve, and between twelve and thirteen, &c.

B.—THE USE TO WHICH THE RESULTS WERE PUT.

Comparisons were made between the results of the intelligence tests and the other data bearing on the children's ability, as follows:—(1) Each form mistress was asked to send in a list of her girls in order of their general ability, as far as she could tell from her own personal opinion. (2) Lists of ability in English, in order of merit, were obtained for each form from the English specialists. (3) Lists of ability in mathematics, in order of merit, for each form were obtained from the mathematical specialists. (4) The

school examination marks for the July examination (on the whole year's work), together with the Senior Cambridge Examination results, were also used. (5) The total marks gained for the summer term by each child were compared with the test results.

The following correlations were obtained with the results of the intelligence tests, and the above sets of data:—
(1) With examination results the correlation was .503.
(2) With general ability, as estimated by form mistresses, .469. (3) With ability in English, .449. (4) With ability in mathematics, .321. (5) With marks for the term, .21.

It will be noted that (1) the correlation between the test results and the examination marks was the highest; (2) the correlation between the test results and the term's marks were the lowest.

Conclusions from the above comparisons.

(1) Examination results, including the Senior Cambridge Examination, do appear to be a fair test of general ability.
(2) Mathematical ability appears to be extremely specialized, and not necessarily an accompaniment of general ability.
(3) The marks gained by a given child for the term's work do not appear to be much guide to an estimate of that child's general intelligence.

With regard to the low correlation between the term's marks and the test results, it can be partly accounted for by cases of prolonged absence, but probably is more largely due to the fact that the type of home-work most frequently set, and most easily corrected, is not calculated to discover intelligence. Exercises involving reproduction of ideas set forth by the teacher in the lessons, and also good memory exercises, secure high marks.

With regard to the correlation between the staff opinion of general ability and the results of the tests, fifty special cases of extreme divergence occurred. This was accounted for as follows:—(1) The children in question being younger than the average of the form, which tends to the underestimating of ability. (2) The children being older, leading to overestimating of ability. (3) Indifferent health, and consequent remitting of home-work. (4) Difficult home circumstances—i.e. want of time in poor homes and in very gay and pleasure-loving homes. (5) Absorbing interest in boys. (6) "Swotting," together with the possession of a good memory. (7) Newness of the child to the school and want of sufficient time in which to judge her work.

C.—THE VALUE OF THE TESTS TO THE SCHOOL.

Supposing them to be good tests of intelligence, they give a more real knowledge of the children than can be obtained by our present methods alone, and enable, therefore, a more satisfactory classification, which should make the teaching of a class far easier than it is at present.

The tests make possible (1) a comparison of all the children in a form; (2) a comparison of all the children in the school of the same age. They show how far her position in the school accords with the general intelligence of any given child and makes possible a comparison of average intelligence of A and B forms—e.g. Lower IVb has a lower average of intelligence than Upper IIIa.

Uses of the Tests in promotions.

(1) Ten children in the school were given double removes, taking into consideration their school work, together with the results of the tests. (2) The middle school has been reclassified into A, B, and C forms on the test results, together with their school results.

D.—ONE OR TWO INTERESTING POINTS NOTICED WERE THE FOLLOWING:—

(1) The correlation between the Senior Cambridge Examination results and the tests was very high (.58).

(2) There are forty-one children in the school of 330 pupils who are above the average for the school—i.e. who have obtained more marks on the tests than the average mark for children two years older than they are. Of these, twenty-two are free-place scholars.

(3) A considerable difference of ability existed between the

free-place scholars admitted in July, 1920, who all entered by the same examination. The maximum marks for the test were 220. These scholars' marks ranged from 128 to 46 out of 220, the age in every case being taken between the years of eleven and twelve.

(4) Two children of good intelligence and of the same age entered for a public examination for a junior exhibition. A. had gained, on the test, 123 out of 220 marks; B. gained 128 out of 220. A. was in Form 3a(i) and gained an exhibition. B. was in Form 3b(i) and did gain not an exhibition. B. was in two forms lower than she should have been, and, if in the same form as A., would have had a better chance of gaining an exhibition also. She had a reputation for not working, possibly because the work was not worth her while. She has now been given a double remove.

(5) C., a free-place scholar, has done badly throughout her school career. She came from a very poor home indeed, almost certainly insufficiently fed—was found at one time delivering newspapers before school in the morning to bring in more money for the family. On the tests she showed intelligence a good deal above the average, and, as the home circumstances are now improving, we hope that she will do well in the years that remain of her school life.

The examining is a simple task, and can be carried out by any person accustomed to dealing with children. In this school it is proposed to examine annually the new entrants of any given school year, at the end of that school year, and to base their first promotions on the result of the test, together with their school record.

THE CURRICULUM IN GIRLS' SCHOOLS.

A DISCUSSION on "The Multiplicity of Subjects in the Curriculum" was held at Stockwell Training College on November 14. Miss Richards, Principal of Stockwell Training College, was in the chair, and, in introducing the speaker, Miss Theodora Clark, of Croydon, spoke of the problem of avoiding dissipation of energy and distraction during school life as an ever pressing and serious one. She emphasized the importance of specialization for elder girls. The advanced course of one or two years now arranged at secondary schools was, in her opinion, a most valuable preparation for training-college work, and students came up ready to take full advantage of the more concentrated academic course which was now part of the Board's syllabus for training colleges.

Miss Clark opened the discussion by the challenging remark that, in her opinion, there were not nearly enough subjects in the school curriculum. Girls were constantly eager to learn many things not usually included, and the curriculum ought to be drawn up to meet any demand on the part of the pupils. On the other hand, it was true that the number of compulsory subjects was too great, if girls were to maintain any standard of excellence. Miss Clark then referred to the important conference recently held with heads of schools by the University of London, at which it was urged that the Matriculation syllabus should only contain one compulsory subject, i.e. English. This would make variety in the school curriculum a real possibility. Apart from this, the school organization ought to possess a certain elasticity by which girls could for a time drop subjects in which proficiency had been gained and substitute new ones in which interest had been aroused. For example, a girl who was much ahead of the others in Latin ought to be allowed to leave it for a while and break ground in Greek. This kind of departure could only be made if the time-table became a somewhat less determining factor; the place it usually took in school life being perhaps unnecessarily arbitrary.

Miss Clark proceeded to outline the scheme adopted by herself and her staff for thus mobilizing the school subjects. She claimed for the scheme that while it was "a thing of

shreds and patches" in being built up of hints from the Dalton and other systems, it was, nevertheless, a garment so fashioned as to be worn with some satisfaction. It was in the experience of every staff that the "starting and stopping," as regulated by a rigid system of change of lessons at the bell, was an undoubted strain on the pupils, and often a wasteful drain of their energy and enthusiasm. At Croham Hurst School a three weeks' time-table has been boldly introduced in the upper school, the number of lessons due for any subject in the three weeks being pooled and given consecutively. Two of these subjects only are taken in any one week, the mornings being divided between them. Singing and drill, however, are taken at the usual intervals every week and for the necessary counterbalance to the concentrated work done in the main subjects. These long periods are naturally not taken up with oral lessons entirely, or even chiefly: a syllabus is put up and the girls work by themselves, as on the Dalton Plan, with the necessary occasional individual advice from the mistress, and oral lessons are used to clear up difficult points. A much increased freedom is at once given by this method, e.g. in English two different plays can be studied by the same class, the oral lesson being given at request when the particular group have done their own study of the play or a portion of it. History and geography can be so taken in close combination, or one for a time subordinated to the other. The mathematical subjects are kept together similarly.

The successful working of the scheme depends largely on the proper grading of the stages. Tests are given every three weeks, and to pass a test means to proceed to the next stage; two tests may be taken together by very quick workers. On the other hand, if a girl fails twice in the same test, she goes back two stages. Miss Clark explained that she attached much importance to girls of the same age working in the same room, even though they were not at the same stage. The external examination results achieved are most satisfactory, and the transition to student life becomes a natural and easy one.

Some very encouraging tributes to the system have been paid also by weaker pupils, one saying of the concentrated work at mathematics, "It has been my salvation," and another that the work is more thoroughly remembered over the interval because "you have to learn it so well."

In the middle and lower school shorter periods are found to be better, but concentration is rendered possible by the two subjects taught by any one mistress being placed together on the time-table—it being understood that one of the lessons (work periods) can be extended, if desirable, at the expense of the other. Free-study periods are arranged—the class voting on the subject they wish to study, often one suggested by out-of-school interests or grown-up talk, e.g. architecture, cities of Italy, hygiene, or civics—the name of the subject being naturally the most ambitious part of it. A delicate girl can use the period for home-work.

A sympathetic and interesting discussion followed, and the question as to how far the system develops the power to use books rightly was handled by several speakers. The special difficulties it entails in connexion with language teaching were considered. It was agreed that a considerable reduction in home-work could be effected by this method of organization, and a potent cause of over-strain thus removed or greatly lessened.

THE thirtieth annual meeting of the Incorporated Association of Head Masters will be held at the Guildhall on January 4. The new president is Mr. C. M. Stuart, of St. Dunstan's College, Catford.

OUR attention has been called to an error in the Scottish notes of our November number. It was there stated that a "dictionary of the Scots language is being compiled with financial help from the Carnegie Trust by Mr. William Grant." We understand that the word "dictionary" in this sentence is a terminological inexactitude. What the Carnegie Trust has helped Mr. Grant to publish is a series of booklets with lists of Scottish words unrecorded in the standard Scottish dictionaries to the number of several hundred.

ENGLAND AND IRELAND.

THE long negotiations between the British Government and the Irish party, known as Sinn Féin, have now (the beginning of December) resulted in a treaty which all hope will prove to be sure and permanent, and it is desirable that we should cast a look back at the long history of which we now see the close of a chapter. Parts of Ireland have been settled at various times by people from England and Scotland, but none of these settlers have long remained distinct from the natives of Ireland, except in Ulster, where English and Scottish settled at the cost of the natives in the reign of James I; the rest of the country has always been in opposition, active or passive, to the English Government, and the story from the sixteenth century onwards consists of a struggle on the part of the latter to enforce its will against the national sentiment. Poyning's law of 1495 made the Irish Parliament subject to the English Privy Council, and later custom made it also subject to the English Parliament; Henry VIII, in defying the Papacy, made himself King of Ireland, and Protestantism, coming to the Irish as part of the "foreign" rule, was rejected by them. The consequence was that Ireland took the losing side in the struggle between Puritan and Stuart, and when, at the end of the seventeenth century, that contest ended with the establishment of a Protestant Succession, Ireland in general and Roman Catholics in particular suffered from many statutes directed against their economic and religious life.

The revolt of the American colonies gave Ireland her opportunity, and in 1782-3 she freed herself, being united to Great Britain only in a common loyalty to the King; even so it was but Protestants who gained, and "Grattan's Parliament" lasted only till 1800 when, by measures still much discussed, the Irish Parliament was united to that of Great Britain, and the "United Kingdom" came into existence. How that settlement was disliked by the great majority of Irishmen, how British statesmen in vain strove to make them contented with it by legislation *for* but not by the Irish, and how the story is one of mingled religion and economics, is too long to tell here. But now there is to be no "United Kingdom" or "United Church"; Ireland is to be a Free State under the Crown, and to have a position in the British Empire like that of Canada, but there are to be no laws on religious matters. May the solution be accepted by the Irish people and prove firm and lasting!

PERSONAL PARAGRAPHS.

SIR PHILIP MAGNUS, M.P. for London University, who has announced that he does not intend to offer himself for re-election after the close of the present Parliament, has been associated with London University as pupil and administrator for over sixty-seven years. He became a pupil at University College School in 1854, for some fifty years he has been a member of the Committee of the University of London, and for over thirty years a member of the Senate. He has fought four successive elections in the Unionist cause, and has represented the University in Parliament for sixteen years. Sir Philip has been a never-failing advocate for education, and he has always been ready with advice and help to teachers and their associations in their endeavours to improve and increase facilities for education. Lately he has been actively concerned in advancing the interests of those independent schools who, in the absence of State aid, are experiencing financial difficulties in arranging for salary scales and superannuation schemes equivalent to those formulated by the Burnham Committee and laid down in the Teachers' Superannuation Act. His record in the cause of education is unique, and his retirement will be universally regretted.

ETONIANS all over the world will receive the news of the death of Mr. Reginald Saumarez de Havilland with grief.

Mr. Havilland was one of the best, if not the best, of rowing coaches the school ever had, and Eton's many successes in the Ladies' Plate at Henley during the past decade were largely due to his skill. After a distinguished career at Eton he went up to Oxford and obtained a third in the Mathematical Final School in 1884. He rowed in the Oxford Eight and became President of the O.U.B.C. He returned to Eton as an assistant master in 1889, and retired in 1920 when Mr. C. J. M. Adie took over his house. He was appointed Major Commandant of the Eton College Rifle Volunteer Corps in 1905. A successful house master and a most faithful friend, his cheery disposition early gained him the title of "Happy," afterwards altered to "Havi." Beloved by all with whom he came into contact, his memory will be cherished with affection by many generations of Etonians.

* * *

MISS A. E. WILMOTT, Senior Mistress at the Wolverhampton Municipal Secondary School, has been appointed first head mistress of the Tunstall Secondary School for Girls, as from January next. Miss Wilmott goes to the Potteries with high credentials. Educated at Peckham Secondary School and at King's College, University of London, she took her B.A. degree with Honours in English in 1907, and two years later obtained her M.A. with distinction in English. After holding appointments as English mistress in secondary schools in the London area, Miss Wilmott was form mistress at Wakefield Girls' High School from 1911 to 1913, and subsequently she held appointments as Senior English Mistress at the County Secondary School, Whitehaven, Senior Mistress at the Secondary School, Goole, and Senior Mistress at Wolverhampton since April of this year.

* * *

OLD Westminster will grieve to hear of the death of Mr. Charles Earle Freeman, at the age of seventy. Mr. Freeman was educated at Uppingham School and Pembroke College, Oxford, where he graduated with a second class Lit. Hum. in 1874. For the greater part of his tenure as a master at Westminster, he served under Dr. Scott, who regarded him as possessing the gift of teaching to an extraordinary degree. Mr. Freeman left Westminster in 1885 and, in partnership with another Westminster master, Mr. Blackburne, opened a preparatory school at Southborough, near Tunbridge Wells, where, under his excellent tuition his pupils from time to time won scholarships at Westminster.

* * *

The death is reported in New South Wales of Mr. C. H. Hodges, formerly assistant master in Rugby School, where he is remembered as a sportsman and a teacher of rare distinction. Mr. Hodges was educated at Carlisle School and Queen's College, Oxford, where he took a first in the mathematical final school. After some experience as an assistant master at Radley, he was appointed on the staff at Rugby, but a breakdown in health caused him to seek a more congenial climate. He settled in Queensland as head master of Townsville School, and later became head master of Sydney School, which he developed into the best equipped and most important school in the Commonwealth. Mr. Hodges was regarded as one of the great constructive head masters and the pioneer of the public-school system in Australia.

* * *

THE new head mistress of the High Wycombe High School for Girls is to be Miss Eva E. E. Dessin, of Somerville College, Oxford, now modern language mistress in the Burlington School, London, W.

* * *

THE announcement of the appointment of Mr. E. R. Thomas, head of the Science Department of Rugby School, to the important head mastership at Newcastle Royal Grammar School, in succession to Major J. E. Talbot, will not come as a surprise to those who have gauged his sterling value. Mr. Thomas received his early education at the

Aberystwyth County School and proceeded to the University College of Wales in the same town. After graduating M.Sc. Wales, he went up to Emmanuel College, Cambridge, and obtained his M.A. in 1906. His first appointment was at Barmouth Intermediate School. In 1912 he became assistant demonstrator in chemistry at Cambridge University, and later in the same year science master at Rugby.

ONLOOKER.

CORRESPONDENCE.

WOMEN AND THE UNIVERSITY OF CAMBRIDGE.

To the Editors of The Journal of Education and School World.

SIRS,—A considerable number, at least twenty-five per cent., of the head mistresses of public secondary schools for girls in this country, and a number of the head mistresses of the largest private schools, are members of one or other of the women's colleges at Cambridge.

They are unanimous in regarding the titular degree as at best a very unsatisfactory substitute for the recognition which all other British universities have granted to their women students. They have good reason to believe that their best pupils will desire to go to Oxford rather than to Cambridge so long as membership of the university with its manifold advantages is denied to women. They recognize, further, that, in future, electing bodies may prefer to appoint Oxford women rather than Cambridge women to the chief posts in the professions, and that this will prove detrimental to the professions as well as to the Cambridge students.

As head mistresses of secondary schools, they deplore the loss which must result if Cambridge is thus debarred from contributing its own peculiar gifts in full measure to the education of the country.—Yours faithfully,

GRACE FANNER.

President of the Association of Head Mistresses.
(Member of the Roll of Newnham College, Cambridge.)
29 Gordon Square, W.C.1.

November 26, 1921.

To the Editors of The Journal of Education and School World.

DEAR SIRS,—I shall be glad if you will allow me, without answering in any detail the article by Mr. Chaytor on "Women and the University of Cambridge" in your last number, to say that the Association that I represent, numbering some thousands of university women, would dissent, I think unanimously, from the last sentence, and would wish some expression of their dissent to appear without delay. We do not think that membership of the University of Cambridge would do women "little good," and we are quite certain that it would not do Cambridge "infinite harm." On the contrary, we believe that refusal of membership does both women and the university very much more harm than the voters who were in the majority on October 20 gave themselves time to recognize.—I am, yours faithfully,

F. R. GRAY.

President, Association of University Women Teachers,
108 Victoria Street, S.W.1.

EDUCATION AND NATIONAL LIFE.—The Teachers Registration Council are taking active steps to enlighten the public as to the dangerous policy of preventing educational development. The Council have prepared a manifesto, which is to be presented to His Majesty's Ministers after signature by as many people as possible who believe that a complete and generous system of education is the best foundation upon which the State can build. It is hoped that teachers everywhere will be willing to obtain the signatures of their fellow-citizens, in order that the copies of the manifesto thus signed may be sent in large numbers from each parliamentary division to its representative in the House of Commons. The manifesto, unfortunately, reaches us too late for space to be found for it; but all readers should write to the Secretary, Teachers Registration Council, 47 Bedford Square, W.C.1, asking for copies to the number required.

The Individual and the Environment.

SOME ASPECTS OF THE THEORY
OF EDUCATION AS ADJUSTMENT.

By J. E. ADAMSON, M.A., D.Lit.,
Director of Education, Transvaal Province.

8vo. 14s.

In this book the author has tried to establish the view that in the conception of the adjustment of individual and environment we have a fundamental principle, about which a rational theory of education can be developed.

TOPICS AND EVENTS.

WE have received an appeal, signed by the late Sir Arthur Pearson, for Fairy Godfathers or Godmothers for the blind girls at Chorley Wood College, who would either pay their educational charges or subscribe to a scholarship fund. Address the Secretary, The Cedars, Chorley Wood, Herts.

THE UNIVERSITIES GRANT.—The universities have been officially informed that the Lords Commissioners of the Treasury are proposing to reduce the annual grant in aid of university education from £1,500,000 to £1,200,000. Those who are conversant with university finance will know what a serious blow this reduction will mean to higher education. In consequence, the Council of the Association of University Teachers, at a largely attended meeting of representatives from all the universities and institutions of university rank in England and Wales, held on November 25 at Bedford College, London, protested against this reduction. The President, Prof. John Strong, moved the following resolution, which was carried unanimously:—"That this Council of the Association of University Teachers has heard with dismay the proposal of the Lords Commissioners of the Treasury to reduce the annual grant in aid of university education by £300,000, and protests against the proposal on the ground that it will seriously hamper the work of the universities, impair their efficiency, and in consequence retard their development in the future to the great loss of the nation." The Chairman went on to say that the annual grant to the universities was absurdly small, being about one-fiftieth of the total annual grant for education and about one-thousandth part of the annual revenue of the country. Already, owing to the large demands of all classes of society for wider opportunities for learning, and the increasing demands of industry and commerce for specialized teaching and research, the universities were in a state of financial embarrassment unequalled in their history. If the proposal were carried into effect it would deal a serious injury, not only to pure learning and science, but to progress and development in industrial and commercial life. The shortsightedness of such policy was equalled only by its injustice.

READING UNIVERSITY COLLEGE.—The movement for turning Reading University College into an independent university goes steadily forward. The answer of the Privy Council to the petition for a Royal Charter, received last August, was favourable to the principle, but laid down two conditions as necessary before a Charter could be granted, the one that the number of students reading for a degree should be increased, the other that the proposed university should be assured of an income of £80,000 a year. The first requirement probably will not cause much trouble, as the number of students is continually growing, and last year there were 240 reading for a degree, out of a total of 1,600, who hailed from all parts of the country. As regards the financial question, the College has already an income from endowments and fees of £70,000, and steps are being taken to bring this up to the required amount. There are three Faculties in the College: letters, science, agriculture and horticulture, and three departments or schools: fine art, music, and domestic subjects. Four hundred of the students live in six college halls, and the academic staff numbers 120.

"DISCOVERY" FOR DECEMBER.—The December number of *Discovery* is as interesting as usual to the average intelligent person—to whom it is primarily addressed. It contains articles, written by authorities in a clear and popular style, on latest developments in commercial aeroplanes, the raid on the Bruges-Ostend Canal in 1798, which is of general interest in view of the raids during the war, an excellent and suggestive essay on helium, social survivals in little visited parts of Japan, British agriculture and the food supply, and on new tendencies in French fiction, dealing in part with the psychology of French childhood as shown through the works of French authors. In addition to these, there is an editorial discussion of the Channel Tunnel and the effect of the tunnel, if constructed, on railway travel. Such a varied range of subjects is remarkable in a monthly periodical. The bibliographies, which are a feature of *Discovery*, given at the foot of the essays add greatly to their value to the student.

MANCHESTER HIGH SCHOOL FOR GIRLS.—On November 14 last, the Day Memorial Gymnasium at Manchester High School for Girls as a memorial to Miss Elizabeth Day, the first head mistress of the school, was opened by Sir Edward and Lady Donner. The cost of the building—which was over £4,000—was met by past and present pupils of the schools, their parents, and friends.

Half of the amount was raised by the school bazaar of 1920. It is noteworthy that the old and present pupils took a large part in the whole affair, and, as Miss Burstall, the head mistress, said in her opening speech, the building is a "monument of loyalty—loyalty to the memory of the honoured head whose name it bears, loyalty to the school which has done so much for all of us who live and serve here." Gymnastics, now under the direction of Miss Helena Bourne, are to take an important part in the future life of the school.

LABOUR AND ECONOMY IN EDUCATION.—The General Council of the Trade Union Congress and the Labour Party Executive passed a resolution on December 14 expressing its profound disapproval of the apparent intention of the Government to reduce expenditure on education, and particularly condemning the decision of the Treasury to reduce the annual grant to universities by £300,000.

UNIVERSITIES AND SCHOOLS.

WALES.

The annual report of the Central Welsh Board shows that the number of pupils in the intermediate schools is still increasing. During the year 1920-21 the number on the school roll was 23,129—an increase of 1,217 over the preceding year. There has, however, been no corresponding increase in accommodation and, consequently, the work in the majority of the schools is greatly hampered by lack of suitable accommodation. But the most disquieting feature of the report is the gradual increase in the proportion of pupils to staff. In 1910 there was one teacher for every 19.2 pupils, but by 1921 this proportion had increased to 22.9, which, of course, is a very high figure. If, therefore, the efficiency of the schools is to be maintained, education authorities will be forced not only to provide more accommodation but also to improve the staffing of the schools. The increase in numbers is, of course, mainly due to the greater influx of new pupils, but the report also discloses the gratifying fact that boys and girls tend to remain longer in school and that the number of post-senior candidates is steadily growing. But unless the schools are adequately staffed, it will not be easy to devote the necessary attention to these pupils and the general standard of the work will be in danger of deteriorating. It seems, therefore, that it is most important from every point of view that immediate steps should be taken to appoint more teachers. At the senior stage there were 3,319 candidates, and 71 per cent. of them were successful. In 1920 the percentage was 77.4. The papers in Latin, mechanics, and physics appear to have been exceptionally difficult, for in each of these subjects the proportion of successful pupils was very low, ranging from 29.8 per cent. to 23.1 per cent. In all the other subjects the work appears to have been thoroughly satisfactory. At the higher certificate stage there were 434 candidates, of which 73.7 per cent. were successful, which is a slightly lower figure than in the previous year.

At the afternoon session of the Board there was a discussion on the "Report on Classics," introduced in a paper by Mr. J. C. Davies, the Director of Education for Denbighshire. The position of Latin and particularly of Greek in the Welsh schools is regarded with much concern, and there have been several conferences recently dealing with it, but so far without much result. This year only eighty-six candidates were entered for the higher certificate in Latin, and eight in Greek.

At the ordinary annual meeting of the Court, which was held at the University College, Swansea, Lord Kenyon drew attention to the very unsatisfactory state of the finances of the university and of the colleges. The suggestion of the University Council to meet the present deficit is that the students' fees should be raised by a substantial amount. In support of this proposal two arguments are adduced: First, that the fees in the Welsh colleges are lower than in any modern university college. For example, the total fees for three years in Wales are as follows:—arts, £36; pure science, £48; applied science, £72; whereas in Birmingham the corresponding figures are £72, £61, and £150. In other colleges the total fees are also nearly double the fees charged in the University of Wales. It is, however, claimed in justification of the low fees that Welsh students are generally poorer than those in English colleges, and that a far larger proportion of them are obliged to live in lodgings and therefore to incur a heavier annual expense. The second argument in favour

(Continued on page 36.)

A collection of amusing anecdotes and stories phonetically transcribed. The ordinary spelling is added for reference.

PLAYS.

SIX PLAYS.

By FLORENCE HENRIETTA DARWIN. Art Paper Covers, 1s. 6d. each (postage 3d.). THE LOVER'S TASKS; BUSHES AND BRIARS; MY MAN JOHN; PRINCESS ROYAL AND THE SEEDS OF LOVE; THE NEW YEAR. Complete in one volume, with an Introduction by Cecil Sharp. Crown 8vo, cloth. 9s. net. (Postage 8d.)

These six Plays are all concerned with the life of country people, and they are in some slight degree based on the Folk Songs of England. They are not written in dialect, but show a very deep understanding of the thoughts of country people and the speech whereby they express themselves. They are simple in plot as they are simple and beautiful in words; and they have already been acted by village players of many counties.

SCENES FROM THE LIFE OF LONG AGO.

Five Historical plays for Senior Forms in Schools. By I. M. GAMBLE and K. E. MARIS. Crown 8vo. 2s. 6d. net. (Postage 4d.)

These plays deal with the early period of British History from the Bronze Age to the Norman Conquest.

PLAYS OF UNRIVALLED EXCELLENCE FOR BOYS.

By C. A. PELLANUS. 1.—TOO CLEVER BY HALF. 1s. net. 2.—A NEW START. 1s. net. 3.—THE FIRST DAY OF THE HOLIDAYS. 1s. net. (Postage 2d. each.)

TWO PLAYS FROM THE PERSE SCHOOL.

Edited by F. C. HAPPOLD, D.S.O. Demy 8vo, boards. 3s. 6d. net. (Postage 4d.)

"Here is an interesting experiment, which might well be attempted in other Public Schools."—*Morning Post*.

THE BIBLICAL HISTORY OF THE HEBREWS.

By F. J. FOAKES-JACKSON, D.D. With an entirely new chapter dealing with the time between the testaments. Fourth Edition, Enlarged, with Maps. Cr. 8vo, cloth. 10s. net. (Postage 1s.) A detailed and exhaustive text-book.

BIBLICAL HISTORY FOR JUNIOR FORMS (Old Testament).

By F. J. FOAKES-JACKSON, D.D. Crown 8vo. 4s. (Postage 6d.)

A simplified form of the above—admirably suitable for a school text-book for all forms.

BIBLICAL HISTORY FOR SCHOOLS (New Testament).

By F. J. FOAKES-JACKSON, D.D. With the collaboration of B. T. DEAN SMITH, M.A., Vice-Principal of Westcott House, Cambridge. Crown 8vo, Maps, Summaries, and Indexes. Cloth. 4s. net. (Postage 6d.)

A SCHOOL STATICS.

By G. W. BREWSTER, M.A., Senior Mathematics Master at Oundle School, and C. J. L. WAGSTAFF, M.A., Head Master, King Edward VII School, King's Lynn. 8vo, cloth. 4s. 6d. net. (Postage 8d.)

This book presents the main principles of Statics in an easy way for boys without special mathematical ability. The book aims at being more than a mere text-book and constant reference is made to simple experiments.

NOTES ON GEOLOGICAL MAP READING.

By ALFRED HARKER, LL.D., F.R.S., F.G.S., Fellow of St. John's College and Reader in Petrology in the University of Cambridge. Demy 8vo, with 40 Illustrations. Sewed. 3s. 6d. net. (Postage 4d.)

The object of these notes is to teach the student to visualize a geological map as in three dimensions, and to show him that the questions which present themselves to the field geologist reduce to exercises in very elementary geometry. This simplicity is gained by reckoning all slopes and dips as gradients, which enables one to dispense alike with trigonometry and with the protractor. The amount of dip, the thickness of a formation, the throw of a fault, &c., are thus measured directly upon a contoured geological map by the use of the scale alone.

of the proposal of the Council is that the Welsh colleges have not raised their fees in proportion to the increased cost of living in recent years. Another source from which more financial aid might be forthcoming is by addition to the penny rate, but there does not seem to be much hope that this will be sanctioned by the counties at present. The Vice-Chancellor, Principal A. H. Trow, also dealt with the financial situation. He referred to the intention of the University Grants Committee to reduce the grant-in-aid for university education from £1,500,000 to the sum of £1,200,000. They will therefore be unable to recommend any further addition to the present annual grants-in-aid. Any future benefactions to the University of Wales will therefore not be supplemented by the Treasury by an equivalent sum as was definitely promised by the Prime Minister on August 14, 1918. The University Court have therefore resolved to appeal to the Government not to withdraw their specific promise without due notice, as otherwise the colleges who have received, but not yet published, substantial subscriptions, may be placed unexpectedly in a position which will seriously hinder further educational development.

Welsh Matriculation. Professor Norwood, of the University College, Cardiff, had an interesting proposal at the last meeting of the University Court, namely, "That English should no longer be a compulsory subject in the matriculation examination, but be included in the list of selected subjects." He had already given his reason for this somewhat novel recommendation in an article in the "Welsh Outlook." The Academic Board will report in due time on it.

SCOTLAND.

The Passing of Sir John Struthers. The retirement of Sir John Struthers from the Secretaryship of the Scottish Education Department removes a very notable figure from the active service of national education. One of Sir John's colleagues once remarked that if the truth were but known as it should, it would be recognized that Scottish education owed more to John Struthers than to John Knox; and there is enough truth in the compliment to make his retirement an event of note, and to lead all Scotsmen to pray that a man as big-minded as he may be found for his successor. Sir John's career has been typically Scottish. The son of a small farmer, he attended a country school in the west country, passed thence to Glasgow University, where, like the Chancellor of the Exchequer, he came under the spell of Edward Caird, the late Master of Balliol, and graduated with first class honours in mental philosophy, and finally rounded off his academic course with a first class in Literae Humaniores at Oxford. The fact that he had trained as a teacher while studying in Glasgow led to his appointment as an inspector of school in 1886, and he so distinguished himself in the varied duties of his office, that when Sir Henry Craik retired from the secretaryship of the department in 1904, his appointment as successor was the obvious and inevitable happening. From that date till now he has laboured assiduously to build up a strong unified system of education in Scotland, and the highest praise that can be given is that he has made a reality the old Scottish ideal of ready access for every boy and girl of ability to the best education that school and university can give. He found secondary education still beset with cramping restrictions in spite of the work done by Sir Henry Craik; he so guided the course of administration that three diverse traditions merged in one, and a chance of a first-rate secondary education without respect to social differences came within the reach of practically every district in the country. He found the training of teachers in the narrow grooves of the church colleges. He created a system of national training colleges which, with all their admitted weaknesses, have so raised the standard of training that the ideal of every teacher being a graduate, if still a little remote, is at any rate within sight. But his greatest achievement was the Education (Scotland) Act of 1918 which, as everyone knows, was largely his creation. It is a great man who has passed. All who have known him and his work will join in wishing him many happy years of busy leisure.

A New Chapter in Scottish Education. The delay in putting the Act of 1918 into full operation, due to the state of the national exchequer, which has been grievous to all who have the weal of Scotland at heart, must have been specially grievous to Sir John. The latest circular of the education department, which will be his last important edict, is a brave attempt to bring to completion, in spite of this check, the long series of reforms in school organization which the department has been working out since its institution in 1885. It is

plain that, if the full scheme of the Act could have been brought into practice, the new plans would have been even further reaching than they are. But, that notwithstanding, they go so far that, if they can all be accomplished, they will change the face of Scottish education. In the first place, the qualifying examination conducted by the inspectors, which has for many years controlled the entrance of pupils into the supplementary and intermediate courses, is no longer to be held. In the second place, the intermediate certificate, hitherto marking the successful completion of a three years' course in a secondary school, is to disappear after 1924, and pupils are to go steadily on through a single course with considerable freedom of option in regard to curriculum to the attaining of the leaving certificate. This alteration follows directly on the resolution of the General Medical Council, that from 1923 onwards medical students must enter their studies with an entrance or matriculation certificate, which means in Scotland the full leaving certificate. In these circumstances, says the department, the intermediate certificate has ceased to have any proper function. (It remains to be seen what is proposed in the case of the pupil who does secondary work up to the age of sixteen and then leaves school. No provision is made for this important case.) In the third place, the old supplementary course, with its merit certificate, is to be scrapped, and the authorities are called on to organize a four years' course of non-secondary education, including a year in the continuation classes. The assumption made is that the school age will be extended to fifteen as provided in the Act and, therefore, over this part of the department's scheme hangs a cloud of uncertainty. In spite of that the difficulties are calmly ignored, and suggestions made to the authorities for their guidance in the organization of this new course, and the local certificates which it is suggested should crown success in it. One can only hope that this faith will be justified. It is encouraging to find that the department is not so pessimistic on this score as most teachers have become.

The Preliminary Qualification of Teachers. It will probably be some time before all the implications of these new proposals are quite realized. One thing that seems implicit in them is a raising of the standard of entrance qualifications for the teaching profession. For many years teachers themselves have been urging that all entrants to the profession, whether candidates for the general certificate or for the certificate given to teachers of special subjects like art and domestic science, should be required to pass the leaving certificate, and their demand for this higher standard has become more pressing since the medical entrance requirements have been raised. The department's circular touches on the point lightly and inconsistently, but it must be evident that the abolition of the lower certificate for scholars in general will make it impossible to permit students to gain admission to the training colleges on anything less than the leaving certificate.

IRELAND.

The New Era. Irish teachers, especially those in secondary schools, will welcome more than most other classes, the prospect of a settlement of the problem of Irish Government. They have suffered from the disturbances which have prevented, or have been made the excuse for not dealing with, any attempt at reforming Irish education since the war. The English Government threw them over and there was no Irish Government to take up their cause. A settlement of the Irish political question carries with it and brings within practical range the handling of this thorny and difficult subject, but the main lines of reform have been laid down in the reports of Educational Boards and of Government Commissions, while the experience of other countries can afford valuable help to the new Irish Free State. In this connexion it is interesting to note that a Sinn Féin Commission, which has been holding an educational inquiry during the past year, makes recommendations for reform on lines already laid down and generally agreed to by the Intermediate Board and the Molony Committee. At the time of writing it is still premature to foretell the attitude of Ulster towards the suggested settlement, but under the present arrangements of the Act of 1920, the Northern Parliament will have handed over to it, on February 1 next, full control of education in all its branches. The Commission already sitting there for the reform and co-ordination of education is making progress, but financial difficulties are already making themselves felt, and the balance at the disposal of the Government is likely to be small. At a session last month (December) the Minister of Finance promised £2,000 to help the secondary teachers in the

EVERYTHING EDUCATIONAL

FOR PUBLIC AND SECONDARY SCHOOLS.

STATIONERY, REQUISITES, FURNITURE.

Furniture and Paper Goods are now Cheaper.

**EXERCISE BOOKS.**

Superior Paper. Artistic Style.
Exceptional Value.

Price 40/- per gross.

Containing 80 pages; bound in stiff leatherette cover with artistic tinted label, which can be printed with name of School. The books are supplied in various rulings.

We hold a huge stock of Exercise Books in all qualities and prices ready for immediate dispatch.

NATURE NOTE BOOKS.

Nature Note Books—the best and most complete series issued—made of excellent writing paper, interleaved with superior cartridge paper, and strongly bound—at 25/- per gross and upwards.

**SCIENCE BOOKS AND BLOCKS.**

We carry a very large stock of Science Books. Graph Books and Papers ruled in—Centimetre and Millimetre Squares, Centimetre and Two-millimetre Squares, Tenths and Half-inch Squares. Fifteenth and One-third-inch Squares.

Science Blocks, ruled in various Science Rulings, also kept in stock.

LOOSE LEAF DEVICES.**ESAVIAN RING BOOK.**

A stiff cloth cover with nickel plated rings that open and close quite easily by pulling one ring apart to open, and snapping it together to close. Complete, with 50 leaves of paper and 5 guides, from 3/- each. Covers only from 2/3 each.

FILING CASES WITH CORDS.

A cloth case with two flanges inside eyeletted, with two holes through which cords are passed to hold several Exercise Books or loose leaf paper.

Complete with Cords, 80 leaves of paper and 5 guides or with 6 Exercise Books and 5 guides, from 2/6 each.

FLAT FILES.

A strong Manilla cover with a flange inside containing two brass pins, paper with punched holes are placed on the pins and kept in place by a metal fastener.

Files, from 4½d. each.
A cheaper quality from 3½d. each.

PAPER. Writing paper in various rulings, Drawing paper, Graph or Science paper kept in stock done up in Reams, Blocks, or in packets of 50. All with punched holes to fit the respective File.

TABLE DESKS.

Table Desks are made in Single and Dual lengths with—

- (a) Locker Top (as illustration).
- (b) Enclosed Bookshelf.
- (c) Plain Hinged Top.

They can be used flat as a Table or raised to a sloping position for writing.

The edge nearest the pupil is always the same height.

Full details and prices on application.

LABORATORY FITTINGS.

The E.S.A. has 40 years' practical experience in the fitting up of school laboratories, and carries out the whole of the work, including the gas and water services, flues, and drainage.

All kinds of School Furniture Fittings are manufactured at the E. S. A. factory, Stevenage, including Esavian Patent Folding Doors, Windows and Partitions, Masters' Desks, Easels, Blackboards, Honours Boards, &c., &c.

Particulars and prices will be gladly forwarded.

TEXT-BOOKS, MAPS, and DIAGRAMS.

The dispatch and accuracy of our Book Department are exceptional. We carry the largest stock of Educational Books in London, and urgent orders are dealt with by our trained staff of assistants on receipt.

THE EDUCATIONAL SUPPLY ASSOCIATION LTD
STEVENAGE HOUSE, 40-44 HOLBORN VIADUCT, LONDON, E.C.1

present financial year, to be allocated on lines to be explained later on. This sum he declared was an earnest of goodwill, but it is surely very little, and the teachers will be disappointed if nothing more is forthcoming.

Education on the Articles of Agreement. The historic settlement signed in the early hours of December 6 contains as its sixteenth article the following concerning religion and education: "Neither the Parliament of the Irish Free State nor the Parliament of Northern Ireland shall make any law so as either directly or indirectly to endow any religion or prohibit or restrict the free exercise thereof, or give any preference or impose any disability on account of religious belief or religious status, or affect prejudicially the right of any child to attend a school receiving public money without attending the religious instruction at the school, or make any discrimination as respects State aid between schools under the management of different religious denominations, or divert from any religious denomination or any educational institution any of its property, except for public utility purposes and on payment of compensation."

The Protestant View. The direction of reform desired generally by Protestants was well expressed in a recent declaration by the Primate of the Irish Church, Dr. D'Arcy, Archbishop of Armagh. He said: "A great question at the present time—a question of the greatest importance for the future of our Northern province and of the whole country—is the education question." His Grace, so long connected with Ulster, may be taken to represent Northern Protestant views, and to know what line Ulster wishes to take in formulating a new scheme. Certain principles had come to the front in recent years which must help to mould the bill which, sooner or later, will be presented to the Northern Parliament. Of these, he enumerated three. First, the community as a whole and not merely certain privileged institutions and persons, must have a voice in the control of education, and must therefore contribute directly to its support. This meant an education rate, and it meant some form of representative management, but it did not mean secularism in education. For his part he believed there were no schools which did so good work as those in which the management was not denominational, and yet in which distinctive religious instruction was given to the children of each denomination by their own ministers; but the change in this direction, if made, must come gradually. Secondly, there was great need of an effective system of co-ordination. It was no doubt possible for a clever boy, even now, to pass from the primary school to the secondary, and from the secondary to the university or to the technical school, but there were too many who got no real chance; there was not the proper facility of communication. Thirdly, there was very urgent need of reform in the machinery of secondary education. The position of teachers was at present perfectly intolerable, without adequate emolument, security, prospects, or provision for old age, and unless some thorough-going reorganization was effected, there would be a complete collapse. It would be well if, at the opening of a new era in Irish history, Protestant and Catholic authorities could agree on broad lines of reform, and if North and South alike, even if they cannot agree to work together, should agree to conform to certain definite principles.

The Schoolmasters' Association. The annual meeting of the Schoolmasters' Association, held in Dublin towards the end of October, was naturally concerned with the unsatisfactory outlook in secondary education. They resolved to continue their protest against the inadequate funds granted by Government to education. It was urged that the £50,000 interim grant should be increased and given on proper lines; and that the grants for science and art teaching should be greater; and further that, in any reform of education, the creation of two different intermediate systems would be detrimental to the interests of Ireland; any new schemes should therefore be based in both North and South on the same educational principles, should approximate as closely as possible in their rules, and should aim at the eventual establishment of one uniform standard of education throughout the country. The Association further protested against the marking in some of the papers in mathematical and science subjects at the intermediate examinations last June. They have forwarded lists showing the diminution in the numbers and in the percentage of candidates obtaining honours in these papers, and express the opinion that this is due to the difficult nature of the papers set and possibly to the severe marking. One result of this was a startling decrease in the number of students reaching the standard total of marks required to qualify for exhibitions, and consequently in the number of awards. The President for the coming year is Mr. Jas. McQuillan, M.A., of the Grammar School, Larne.

The report of the Prime Minister's Committee on classics in education has a chapter on classics in Ireland, which contains a very interesting summary of facts, but it vitiated by two or three mis-statements. It is stated that more than half of the 1,403 students on the books of Trinity College are non-resident. This is very misleading, as the true proportion is 5 per cent. Again, in giving the statistics of classical students in Trinity College, pre-war figures are given (for 1903-4, 1904-5, 1912-13, 1913-14), and then 1918-19, from which, of course, no conclusions can be drawn at all. Another statement which is quite misleading is, "we learned with regret that in Dublin and Belfast very little Greek is being studied in schools of any (Protestant) denominations." There are at least two in Dublin alone to which this statement does not apply. The Committee were, however, rightly impressed by the educational position generally in Ireland. Among other anomalies referred to, is the fact that the elementary, intermediate, and technical systems, while overlapping at every turn, are yet absolutely separate and independent of one another, and this is disastrous to educational efficiency. Four recommendations are made for Ireland: (1) to abolish the overlapping referred to; (2) to raise the standard of salaries of secondary teachers; (3) that the historical side of classics should be emphasized equally with the literary and linguistic, and that material aids should be provided; and (4) that, to provide well qualified teachers for schools, there should be adequate endowment for teachers of Latin, Greek, and ancient history and archæology in all universities and university colleges.

PRIZE COMPETITIONS.

THE prize for the December competition is awarded to "Boy," and the second place to "Travailleur."

The winner of the November competition was Miss W. L. Shore, 6 Vereker Road, W.14.

"Esse quam videri," to whom the prize for October was sent, is Mrs. Swire, 443 Hagley Road, Birmingham.

Extract from Henri Bordeaux's "La Croisée des Chemins."

By "Boy."

Hubert Epervans was the son of a man in a small way of business at Bourgoin, a former schoolmaster turned land agent. Always on the look out for property to be sold or rented, or for bargains of any kind, this man had a wonderful knowledge of rustic character and how to profit by it. From his teaching days he had always had a profound respect for a college degree, so much so that he had urged his son to take up the most expensive studies, and found himself obliged to dun his clients in order that the Parisian might want for nothing.

The rawness of the stock showed itself in Hubert by an incredible capacity for work, joined to an art of turning everything to account—a greedy, grasping nature that left no plate unscraped, and a certain vulgarity of manner made the more noticeable by the calculated self-assurance and cynicism of his talk. He was without the restraint of that good breeding which gives evidence of previous refinement and competence in several generations of ancestors. Apart from this, however, he inspired some degree of sympathy. Industrious, full of life and energy, always piling up profits, cut out to develop his father's schemes on the grand scale, he made a good impression by his genius for organization and his constructive faculty, added to a contagious optimism and a spirit of good fellowship.

Felix Chassal's family, an older one, had come originally from La Tour du Pin, but was no longer closely connected with it. His grandfather had founded a bank at Lyons, and his father had been in the diplomatic service. He himself, brought up in foreign capitals, prematurely orphaned, and confided to the care of selfish grandparents, had in consequence allowed his feelings for his family and country—which from temperament he was little given to indulging—to become enfeebled, though still capable of being revived for a practical purpose. He spoke several languages, had the ease and manner that comes of travel, enjoyed his fortune and took care of it; but no one knew exactly what he was worth, for he was clever, cunning, and secretive on principle.

72 WIGMORE ST., LONDON, W.1.

We classify the 62 versions received as follows:—

Class I.—(a) Boy, Travailleur, F. W. Macnamara, E.A.N., A Peu Près, Emile, Esse quam videri.

(b) Penguin, Ardeonaig, I.R.A., Chingleput, K.M.B., Torelore, L.G.B., Francine, Plodder, C.R.C., Menevia.

Class II.—(a) R.H.A., Eugénie, Bésigue, Lure, Peronnelle, Kim, Florah, Dorothy Vernon, Percy, Rosemary, Sirach, Box, Gobelins, F.W.M., Frank, Woodlea, Playshaw, Michael, Mondham, M.M.H., Dane, Leander, Bedruthan.

Class III.—Carlyle, Des Essais, Winkleheart, D.M.B., Marie, J.S., Inscitia, Mont Blanc, J.S.H., Kent Fool, Love in a Mist, Muguet, S.H.C., Columba, No Man, Cuthbert, S.A.B.

Class IV.—Mephistopheles, Cygne, Marie Louise, S.I.N.

A Prize of Two Guineas is offered for the best answers to the following questions:—

1. Complete the following jests and repartees:—

(a) "And, doctor, do you really think
That asses' milk I ought to drink?
It cured yourself, I grant, 'tis true,
But then —"

(b) The "Saye and Sele Arms," near Banbury, bears the family motto, "Fortem posce animum." A wag once translated this —.

(c) Napoleon once said to a witty Italian lady: "Gli Italiani tutti ladroni." She replied: "Non tutti, ma —."

(d) Lady Manners, who had recently acquired her title, remarked, satirically, to Margaret, the daughter of Sir Thomas More: "Honores mutant mores." Margaret replied: "That goes better in English, Madam, —."

(e) Archie, Charles I's Court Jester, had an antipathy to Archbishop Laud. Being asked to say grace when the latter was dining with the King, he delivered himself as follows:—"Great praise be given to God and —."

2. Complete the following quotations and name the author, if possible:—

(a) There is nothing contrived by man by which so much happiness has been produced as by —.

(b) And the devil did grin for his favourite sin
Is —.

(c) — is the only Paradise out of which we cannot be driven.

(d) In that high place he had so borne himself that all had feared him, that most loved him, and that envy herself could deny him no title to glory, except —.

(e) It doesn't matter what children learn at school, as long as they —.

(f) Rumour is like —; the more you fight them, the more you don't get rid of them.

(g) The — never pardons.

(h) — is proud that he has learned so much;

— is humble that he knows no more.

3. As Napoleon, after leaving Elba, travelled towards Paris, the French newspapers became more and more respectful in their language. Supply the names and titles used by a certain newspaper on the stated dates.

"Le 26 février. — est parti de l'île d'Elbe."

"Le 28 février. — est débarqué à Cannes."

"Le 4 mars. — s'est emparé de Grenoble."

"Le 11 mars. — a fait son entrée à Lyon."

"Hier, — a été reçu à Fontainebleau, au milieu des acclamations."

4. Name the six best biographies in the English language (Boswell's "Johnson" excluded).

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on January 14, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Applications from intending purchasers are solicited for the following properties:

Cumberland (beautiful district).—Boarding and Day School for Girls. Established and conducted by vendor since 1911. Number of Boarders, 26, 7 of whom are Weekly Boarders. Fees for Full Boarders £96 per annum, and for Weekly Boarders, £67, without extras. Number of Day Pupils, 26, fees (under 12) 12 guineas, over 12 years of age, 18 guineas. Extras £300. Gross receipts past year, £3,265, 7s. 4d.; average for 2 years, £2,977, 10s. Net profits past year, £800. Rent of premises—a large mansion in a beautiful position, containing 5 schoolrooms, 13 bedrooms (6 dormitories), dining room, sitting room, study, 2 cloakrooms, 2 bathrooms, 2 staircases, &c., £150. Excellent modern sanitation, own water supply. The house stands in its own grounds. Clay soil. Price for goodwill about £800 to £1,000. School furniture, including 5 pianos, £400. Household furniture at valuation.—No. 7,272

Yorkshire.—Girls' Boarding and Day School. Established and conducted by vendors 14 years. Gross receipts past year, £1,596, 10s. 3d. Net profits past year, £296. Number of Boarders, 14, paying from £45 to £60 per annum, and extras; 46 Day Pupils, paying £4, 14s. 6d. to £12, 12s. per annum. Rent of 2 houses combined, containing 13 bedrooms, 4 classrooms, 3 sitting rooms, dining room, 3 cloakrooms, kitchens, &c. Yearly tenancy, £70. The houses are close to the sea, with good open views. Price for goodwill, about £550. School furniture and most of household furniture at valuation.—No. 7,269.

Scotland.—Girls' Boarding and Day School (with little boys in Kindergarten). Established 50 years. Gross receipts past year, £4,645. Net profits, about £860. Number of Boarders, 25, paying £120 to £140 per annum, and about 50 to 60 Day Pupils, paying from £25 to £40 per annum. Rent of large house, held on lease, which expires in May next, only £79. The vendors would accept one term's fees by way of goodwill. School furniture, and some household furniture, at valuation.—No. 7,241.

London, N.W.—Successful Boarding and Day School for Girls. Established over 80 years, and conducted by vendor 23 years. Gross receipts for past year, £2,138. Net profit for past year, £546. Number of Boarders, 13, fees from 60 to 90 guineas per annum. Number of Day Pupils, 57, fees from 12 to 27 guineas per annum, without extras. Rent of detached house, containing 22 rooms, including large dining room, schoolroom, dormitory, £150. The house held on 21 years' lease from 1917. Price for goodwill, £750. School and household furniture, £500, or at valuation. Price for lease, £200. We understand the vendor is retiring owing to her having realized a competency.—No. 7,267.

Cheshire.—Boarding and Day School. Established 40 years. Gross receipts past year, £600. Number of Boarders, 16, fees £14 to £18, 8s. per term.

Number of Day Pupils, 62, fees £1, 10s. to £3, 3s. Rent of large house, standing in its own grounds, vegetable garden, tennis court, £38. Price for goodwill, £260. School and household furniture by arrangement.—No. 7,259.

Middlesex.—Day School for Girls. Established and conducted by vendor since 1911, when she started with only one pupil. Gross receipts past year, £2,625. Net profits past year, about £751. Number of Pupils, 211, paying from £3, 13s. to £6 per term, according to age. The vendor has erected a good school building containing 9 classrooms, 6 bedrooms, dining room, kitchen, &c., which has been approved by the Board of Education, costing in 1914 about £1,700 to build. The vendor wishes to sell same, or might grant a lease to a desirable purchaser. There is about 1½ plots of land at the side of the school building that could be leased from the vendor. Goodwill, one term's fees. School furniture at valuation; household if desired.—No. 7,250.

Scotland.—Girls' Boarding and Day School. Established about 60 years. Gross receipts for past year, £3,653. Net profits past year £743, 11s. Number of Pupils as follows:—19 Boarders at £16 a quarter, 6 Weekly Boarders at £13 a quarter, 20 Day Pupils at £3 a quarter, 5 Transition Pupils at £2 a quarter, 7 Preparatory Class Pupils at £1, 10s. a quarter. Rent of house £91 per annum. Price for goodwill, school and household furniture, £900.—No. 7,213.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—

GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 & 13 Henrietta St., Covent Garden, London, W.C.2.

Schools transferred and valued. **No charge whatever** will be made to vendors of Schools or School Partnerships unless a sale is effected or agreed upon. **No commission charge** whatever made to Purchasers of Schools or School Partnerships.

Scholarships, &c.

Continued from page 43.

LECTURERS.**L E E D S U N I V E R S I T Y.**

DEPARTMENT OF FRENCH LANGUAGE AND LITERATURE.

The University Council will shortly proceed to the appointment of an ASSISTANT LECTURER in the Department of French Language and Literature, at a salary of £300 a year. Applications must be received not later than the 31st January. Particulars may be obtained from THE REGISTRAR, The University, Leeds.

Master of Method.

A VACANCY exists for a MASTER OF METHOD in the Education Department of the GOLD COAST.

Salary £600, rising by £30 annually to £720, and thence by £40 annually to £920; efficiency bars at £720 and £840; seniority allowance £72 a year after the bar at £720 has been passed. Outfit allowance of £60.

Free quarters are provided or an allowance is paid in lieu. Free passage for the officer himself, half-cost of wife's passage under certain conditions.

Normal tour of service from twelve to eighteen months, after which leave granted with full pay on the basis of one week's leave for each completed month of service, with extension on full pay if necessary.

Appointment probationary for three years in the first instance, then, if confirmed, permanent and pensionable. Officers may retire on pension on reaching the age of 50; but pension may be awarded earlier in case of ill-health. Pension is calculated at the rate of 1/480th of an officer's final pensionable emoluments for each completed month of service, or an officer may elect to receive a gratuity of one year's pensionable emoluments and a pension reduced by one-fifth.

Candidates should be specialists in educational methods, and fully competent to instruct in the correct methods of teaching, based on the principles of education, psychology, and method.

Applications should be addressed in writing to the ASSISTANT PRIVATE SECRETARY (APPOINTMENTS), Colonial Office, S.W.1, from whom application forms may be obtained. Testimonials should not be sent until asked for.

Publications Editor.

A VACANCY exists for a PUBLICATIONS EDITOR in the Educational Department of the GOLD COAST.

Salary £600, rising by £30 annually to £720, and thence by £40 annually to £920; efficiency bars at £720 and £840; seniority allowance £72 a year after the bar at £720 has been passed. Outfit allowance of £60.

Free quarters are provided or an allowance is paid in lieu. Free passage for the officer himself, half-cost of wife's passage under certain conditions.

Normal tour of service from twelve to eighteen months, after which leave granted with full pay on the basis of one week's leave for each completed month of service, with extension on full pay if necessary.

Appointment probationary for three years in the first instance, then, if confirmed, permanent and pensionable. Officers may retire on pension on reaching the age of 50; but pension may be awarded earlier in case of ill-health. Pension is calculated at the rate of 1/480th of an officer's final pensionable emoluments for each completed month of service, or an officer may elect to receive a gratuity of one year's pensionable emoluments and a pension reduced by one-fifth.

The principal duties are to compile readers and text-books for use by native children at schools in the Gold Coast, and to prepare special books on Nature Study, Geography, and History for the use of teachers.

Applications should be addressed in writing to the ASSISTANT PRIVATE SECRETARY (APPOINTMENTS), Colonial Office, S.W.1, from whom application forms may be obtained. Testimonials should not be sent until asked for.

BLACKIE'S SELECT LIST.

SYSTEMATIC QUALITATIVE ANALYSIS.

For Students of Inorganic Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Principal of the Technical College, Darlington. 5s. net.

A SHORT SYSTEM OF QUALITATIVE ANALYSIS.

For Students of Inorganic Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C. 2s. 6d. net.

APPLIED CALCULUS.

By F. F. P. BISACRE, O.B.E., M.A., B.Sc., A.M.Inst.C.E. Large crown 8vo. xii+446 pp., and answers, including 106 figures, and 17 half-tone portraits of celebrated mathematicians and physicists. Price 10s. 6d. net.

CONTENTS:—General Principles—Geometrical and Mechanical Meaning of a Derivative—Integration—Limits—Practical Applications—Differentiation and Integration—Infinitesimals—Integration—Mensuration—Successive Differentiation—Curvature of Plane Curves—Maxima and Minima—Exponential and Logarithmic Functions—Some Problems in Electricity and Magnetism—Some Problems in Chemical Dynamics—Some Problems in Thermodynamics.

This book has been specially written for science and engineering students who desire to acquire a working knowledge of the calculus but whose preliminary mathematical equipment is slight.

[JUST PUBLISHED.]

AN INTRODUCTION TO APPLIED GEOGRAPHY.

By ALEXANDER STEVENS, M.A., B.Sc., Lecturer in Geography, University of Glasgow. Crown 8vo, 6s. net.

This book has been written to provide a course of study in geography for those who propose to enter professions in which a knowledge of practical geography is essential.

[JUST PUBLISHED.]

THE FOUNDATIONS OF CHEMICAL THEORY.

An Introductory Text-book.

By R. M. CAVEN, D.Sc. (Lond.), F.I.C.,

12s. 6d. net.

Professor of Inorganic and Analytical Chemistry in the Royal Technical College, Glasgow.

The author hopes that the general reader, who wishes to know what modern chemistry really means, will find within these pages the information he desires; and that the student to whom chemical science offers an open field of glowing possibilities will find the chapters of this book a not unwelcome guide in his earlier excursions.

Briefly, it is suggested that the book may be read by the student during or at the end of his second year's course, for the purpose of knitting together his chemical knowledge in view of the more advanced studies which lie before him later.

FUEL AND REFRACTORY MATERIALS.

By A. HUMBOLDT SEXTON, F.I.C., F.C.S., Past President of the West of Scotland Iron and Steel Institute, &c., &c. New edition, completely revised and enlarged by W. B. DAVIDSON, D.Sc., Ph.D., F.I.C. Large Demy 8vo, vii + 382 pp., with 111 figures. Price 12s. 6d. net.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.,

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. 6d. each.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. 3d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater Plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well known Junior School Shakespeare, which omits everything that might be thought undesirable in class reading. Price 7d. each.

THE GROUNDWORK OF BRITISH HISTORY.

New Edition, brought down to 1921.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN M.A., Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super crown 8vo 8s. net. Complete in One Volume.

In Two Parts, 5s. each net. Part I, B.C. 55-1603; Part II, 1603-1911.

In Three Sections, 3s. 9d. each net:—Section I, B.C. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1911.

N.B.—For the convenience of those using earlier editions of the "GROUNDWORK," a Supplement has just been issued bringing the book down to date, price 1s. 6d. net.

Prospectuses giving full particulars of above publications post free on application.

A forty-eight page Illustrated Pamphlet describing all Ginn & Company's Children's Books will be sent post free on application.

THE NEW HUDSON SHAKESPEARE

With Introduction and Notes by H. N. HUDSON, LL.D. Edited and Revised by E. C. BLACK, Ph.D. Glasgow, with the co-operation of A. J. GEORGE, Litt.D.

Each Volume price 2s. 9d. net.

The characteristics of this edition are the comprehensive introductory material, which includes a history of the play, a discussion of the sources of the plot, paragraphs on versification, sketches of the principal characters, etc.; the inclusion of variant readings of subsequent editions (the text being based upon the First Folio), together with textual and literary notes at the foot of each page; the facsimile which each volume contains of an important page from a Quarto, Folio, or Source Book; and the artistic appearance of each book, due to the blue, flexible binding, the good quality of the paper, and the clear type.

The following plays are now ready:—

As You Like It
Coriolanus
Hamlet
Henry V

Julius Caesar
King John
King Lear
Macbeth

Merchant of Venice
Midsummer Night's Dream
Much Ado About Nothing
Richard II

Richard III
Romeo and Juliet
The Tempest
Twelfth Night

(An Illustrated Prospectus will be sent post free on application.)

BELL'S STANDARD TEXT-BOOKS

MR. C. V. DURELL'S WELL-KNOWN MATHEMATICAL TEXT-BOOKS

A Concise Geometry

By C. V. DURELL, M.A., Senior Mathematical Master, Winchester College. 2nd Edition. 5s.

In this book the number of propositions is limited to the smallest amount consistent with the requirements of the average examination. The work is therefore compact in treatment. The propositions are printed consecutively, but the proofing of the theorems has been reduced to a minimum. There are a large number of rider examples and constructive exercises grouped according to the blocks of propositions.

"The book fulfils its purpose admirably."—*Mathematical Gazette*.

"Supplies a large number of easy and varied examples. . . . The method seems excellent."—*Times Educational Supplement*.

Elementary Algebra

By C. V. DURELL, G. W. PALMER, late Master of the Royal Mathematical School, Christ's Hospital, and R. M. WRIGHT, M.A., Eton College.

Complete in one volume. With detailed introduction and full answers, for teachers' use, 8s. 6d.; without introduction and with only select answers, 7s. Answers separately, 1s. 6d.

Part I, by C. V. DURELL and G. W. PALMER. 3rd edition. 4s. 6d. and 3s. 6d. Answers separately 1s.

Part II, by C. V. DURELL and C. M. WRIGHT. 2nd edition. 5s. 6d. and 4s. 6d. Answers separately, 1s.

"We know of no better introduction to the elements of algebra."

"Nearer the ideal book for beginners than any we have yet seen."—*Mathematical Gazette* on Part I.

SCIENCE

TEXT-BOOKS BY PROF. SMITH.

Intermediate Chemistry. By ALEX. SMITH, B.Sc., Ph.D., F.R.S.E., Professor of Chemistry and Head of the Department, Columbia University. 9s. 6d. net.

"Prof. Smith possesses in a high degree the art of giving concise information in a clear and interesting manner, and this book adds one more to the number for which chemical students are indebted to him."

Educational Times.

Introduction to Inorganic Chemistry. 35th Thousand. 12s. 6d. net.

General Chemistry for Schools. 45th Thousand. New Edition, revised and enlarged. 10s. 6d. net.

Elementary Chemistry for Schools. Adapted for use in English Schools by H. A. WOOTTON, M.A., B.Sc., Head Master, Kingswood School, Bath. 2nd Edition. 7s. 6d. net.

Laboratory outlines are available for use with each of Prof. Smith's text-books.

Inorganic Chemistry. By SIR JAMES WALKER, D.Sc., Ph.D., F.R.S. 14th Edition, revised and enlarged. 5s. net.

Inorganic Chemistry for Upper Forms. By P. W. OSCROFT, M.A., Uppingham School. 4th Edition, revised. 7s. 6d. net.

An Introduction to Chemistry. By D. S. MACNAIR, Ph.D., B.Sc. 11th Edition. 3s. net.

A First Year's Course of Chemistry. By JAMES SINCLAIR, M.A., B.Sc., Head Master of Shawlands Academy, Glasgow, and G. W. M'ALLISTER, M.A. 3rd Edition. 2s. 6d.

A Three Years' Course in Practical Physics. By JAMES SINCLAIR, M.A., B.Sc. In Three Parts. With numerous Diagrams. 2s. 3d. each.

An Experimental Course of Physical Chemistry. By J. F. SPENCER, D.Sc., F.I.C. 2 Vols. 2nd Edition, revised and enlarged. Vol. I.—Static Experiments; Vol. II.—Dynamical Experiments. 6s. net each.

The World of Sound. Based upon Royal Institution Lectures. By SIR WILLIAM BRAGG, K.B.E., F.R.S., D.Sc. School Edition. 5s. net.

Introduction to Organic Chemistry. By D. L. HAMMICK, M.A. 6s.

Fundamental Principles of Organic Chemistry. By PROF. CHARLES MOUREU. Authorized Translation from the Sixth French Edition by W. T. K. BRAUNHOLTZ, B.A., A.I.C. With Introduction by SIR W. J. POPE, K.B.E., F.R.S. 12s. 6d. net.

A Guide to the Preparation of a Note-book of Biology. By E. W. SHANN, B.Sc., Biology Master at Oundle School. 2s. 6d. net.

An Introduction to the Study of Plants. By F. E. FRITCH, D.Sc., Ph.D., F.L.S., and E. J. SALISBURY, D.Sc., F.L.S. 6th Edition. Illustrated. 7s. 6d. net.

Elementary Studies in Plant Life. By F. E. FRITCH and E. J. SALISBURY. 5th Edition. 3s. 6d. net.

Elementary Botany. By PERCY GROOM, M.A., D.Sc., F.L.S. 16th Edition. 5s.

LATIN

BELL'S SIMPLIFIED LATIN CLASSICS. Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. With illustrations, translation exercises, and a full vocabulary. 1s. 6d. each.

Caesar's Invasions of Britain.
Livy's Seven Kings of Rome.
Simple Selections from Cicero's Letters.

Vergil's Athletic Sports.
Vergil's Taking of Troy.
Tacitus' Agricola.
Sallust's Catiline.

Caesar's Fifth Campaign (from De Bello Gallico, Book V).

Caesar's Belgian Campaign.

BELL'S ONE - TERM LATIN CLASSICS.

Designed for use with Fourth or Fifth Forms.

Cicero's Pro Milone. Edited by C. E. LAURENCE, M.A., Assistant Master at Haileybury College. 1s. 3d.

Livy's Veil and the Etruscan Confederacy. Edited by S. E. WINBOLT, M.A. 1s. 3d.

BELL'S ILLUSTRATED CLASSICS. Edited by E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford. Sixty volumes, each illustrated, and containing Notes and a full Latin-English Vocabulary. Detailed list on application.

BELL'S ILLUSTRATED LATIN READERS.

Simple Stories for translation, Extracts from Eutropius, Caesar, Ovid, Nepos, Cicero, &c. Edited by E. C. MARCHANT, M.A. With short Notes and vocabularies. Illustrated. 1s. 6d. each.

Scalae Primae. By J. G. SPENCER, B.A. 139th Thousand.

Scalae Mediae. By PERCY A. UNDERHILL, M.A. 14th Edition.

Scalae Tertiae. By E. C. MARCHANT. 7th Edition.

Bell's Latin Course for the First Year. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. In Three Parts. With Coloured Plates and numerous other illustrations. 2s. each.

Bell's Concise Latin Course, Part I. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. Thirteenth Edition, revised, with long quantities marked. 3s.

Bell's Concise Latin Course, Part II. By E. C. MARCHANT, M.A., and S. E. WINBOLT, M.A. Fourth Edition. 3s. 6d.

The Shorter Aeneid. By H. H. HARDY, M.A., Head Master of Cheltenham College. With Introduction by Prof. H. E. BUTLER, University of London. Second Edition. 4s. 6d.

A volume of selected passages from the Aeneid worked up into a connected narrative by means of summaries in English. The Epic can thus be read as a whole and the story appreciated.

Fabulae Antiquae. A First Year Reader. By A. M. CROFT, B.A., Leeds Girls' Modern School. Illustrated, with or without Full Vocabulary. Second Edition. 1s. 9d.

De Ducibus. Selections from Cornelius Nepos. By W. G. BUTLER, M.A. With numerous illustrations and brief Grammatical Notes. Second Edition. 1s. 9d. Uniform with Bell's Simplified Latin Classics.

Dialogues of Roman Life. By S. E. WINBOLT, M.A. Second Edition. Illustrated. 2s. 6d.

A series of dialogues, both original and adapted, written in accordance with the aims of the Summer School for the Reform of Latin Teaching.

A Book of the Emperors. Edited, with Notes and Vocabulary, by E. C. MARCHANT, M.A. Illustrated. 3rd Edition. 1s. 9d. Based upon Suetonius' Lives of the Emperors, and contains the Lives of Julius Caesar, Augustus, Caracalla, Boadicea, Vespasian, and Titus Agricola. For second year pupils.

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2

Messrs. BELL will publish the following
FIVE NEW BOOKS

DURING THE MONTH OF JANUARY.

BY SIR HENRY NEWBOLT

Poems of Yesterday and To-day

Chosen for Students at Home and Abroad, by SIR HENRY NEWBOLT. Small crown 8vo. About 3s.

This new anthology contains 106 poems. Modern poets are well represented, and a large proportion of the poems are copyright.

BY GEORGE SAINTSBURY

A Letter Book

Selected, with an Introduction on the History and Art of Letter Writing, by GEORGE SAINTSBURY. Crown 8vo. About 6s.

Mr. Saintsbury's new book, which is based on more than half a century's reading in and around the subject, contains an interesting collection of letters, ancient, medieval, and modern, prefaced by biographical and critical notes. He believes that this representative selection of the best letters explains the art of letter writing and the essentials of a good letter in a way which far excels all rules and instructions.

A Short History of Our Religion

from Moses to the Present Day. By D. C. SOMERVELL, M.A. Crown 8vo. About 6s.

This book has been written as a contribution to that most difficult subject, "Divinity" teaching in Secondary Schools. The author believes that our Bible teaching has been too much occupied with political, biographical, and geographical details which are only of secondary importance. He maintains that we should concentrate more on the religious aspects of the Bible, together with an extension of the study of Christianity outside the Biblical limits. With these objects in view he has presented in an interesting way a continuous history of religious development down to our own times.

A Short Algebra

By H. P. SPARLING, M.A., Assistant Master at Rugby School. Crown 8vo. 2s. 6d.

Contains examples on the various stages of School Algebra knowledge of which is required in Physics, Trigonometry, and the Calculus. To attain this end within so small a compass, verbal explanation of straightforward processes has been left to the teacher. The exercises on these are all simple and will be found sufficient.

Except for the Calculus, the book will be found to cover fully the ground of the School Certificate Examination of the Oxford and Cambridge Joint Board.

Readable School Physics

By J. A. COCHRANE, B.Sc. Crown 8vo. With eight portraits of eminent physicists of the past and numerous illustrations in the text.

[*Bell's Natural Science Series*: Editor, E. J. HOLMYARD, M.A., Head of the Science Dept., Clifton College.]

This book is an attempt to humanize elementary physics without popularizing the subject. Theory has been given the main prominence. Experiments have not been described unless to elucidate principles; it is in no respect a laboratory manual. References to the makers of scientific history are frequent, and connexion with the pupil's own experience is established as often as possible. It is believed that the book will prove a valuable adjunct to the practical work in the laboratory.

REVIEWS AND MINOR NOTICES.

HISTORY.

Abraham Lincoln, Democrat. By F. I. PARADISE.
 (5s. net. Mills & Boon.)

Abraham Lincoln is one of the few men in history of whom we can say that his life and work changed the world. He stands for all time as the embodiment of two great principles: the one, that man can never hold property in man; the other, that a nation which history and geography have made one has a moral right to prevent by force the secession of a part; and the devotion of his life to these great moral principles place him on a height to which scarcely another of the political leaders of men has attained. Those who know him can afford to smile at the classicist who asks whether modern history can ever be so inspiring as the study of antiquity. There is no Greek or Roman whose work is in the least degree parallel to that of this American. No Roman *imperator* ever waged a great war for the advancement of humanity. No Roman soldiers ever fought in the spirit in which the men of the North fought at Gettysburg and Champion's Hill. No Greek or Roman statesman ever had before his eyes the vision of a land "dedicated to the proposition that all men are born free and equal"; none, after a bitter and murderous civil war, bade his fellow-countrymen, "with malice towards none; with charity for all; with firmness in the right, as God gives us to see the right, strive on to finish the work we are in, and bind up the nation's wounds." We are getting far enough from Lincoln to see him as he was, and to judge him impartially. Lord Charnwood has written a thoughtful and judicious biography for the scholar; Dr. Paradise, an American, formerly Dean of Christ Church Cathedral, New Orleans, gives us in this short work a picture painted for the masses in warmer and more living colours. Lord Charnwood wrote as a critical historian; Dr. Paradise writes as a friend and lover of the man. His object is to give a sketch of the hero: not to write the history of his times. Just about half his 170 pages are covered before he reaches Lincoln's election to the Presidency. "Our interest," says the preface, "lies in the long struggle against adverse conditions by which he was disciplined for his task." To our mind, however, the amount is a little out of proportion; we should like to have heard more about Lincoln during the war, particularly during those first two years when the fate of the United States was hanging in the balance. But we admit the difficulty of treating the President's work during this period without going into complicated details of military history, which would have been unsuitable for a popular work. We must not forget to add that Dr. Paradise writes as an American, with an American's belief in the mission of his country. His book is pervaded by the best American spirit. "Democrat," in the title, is not an empty word; the meaning of the addition is explained in the preface: "The full measure of Lincoln's influence over the course of human history, over the minds and hearts of coming generations, will be reached only when Democracy has been touched and heightened by the same spirit which ennobled his public career."

The Collected Historical Works of Sir Francis Palgrave, K.H. Vols. V, VI, and VII. Edited by Sir R. H. INGLIS PALGRAVE. (42s. net each. Cambridge University Press.)

The three volumes before us belong to the splendid ten-volume edition of Sir Francis Palgrave's "Collected Historical Works," being published by the Cambridge University Press under instructions given by the late Sir Inglis Palgrave, son of the historian. The death of Sir Inglis soon after the issue of the early volumes of the series has left the editorial labour to be carried through by Mr. G. Palgrave Barker, assisted by a band of experts, whose notes and additions form an important feature of the new edition. Of the present three volumes: No. V contains "The History of the Anglo-Saxons," originally published in 1831; Nos. VI and VII together include "The English Commonwealth," with

the extensive collection of proofs and illustrations which accompanied it in 1832. The whole relates to England before the Norman Conquest. At the time of its first appearance it was a very remarkable production. The *Edinburgh Review* characterized it as "beyond all question the most luminous work that has ever been published on the early history of England." It helped to turn the attention of scholars from political to constitutional history, and to raise many of the problems relating to Anglo-Saxon law and government which have occupied the thoughts of antiquarians from the days of the Reform Bill to the present time. Of course, many—indeed most—of Palgrave's conclusions have had to be modified or abandoned in the light of the later researches of Kemble, Stubbs, Vinogradoff, and Maitland; but, all the same, it is interesting and educative to see the beginnings of the modern scientific study of institutions and to observe the lines along which the pioneer intelligence moved. The full and careful notes of the editor and his coadjutors serve to prevent the reader from being led into error by the antiquities of the text. As to the form of these massive books, no praise can be too high for the print, paper, and binding of the Cambridge University Press, or for the beautiful illustrations provided by Mr. Emery Walker. The present edition supplies what was a serious omission in the original edition—viz., an index.

EDUCATION AND PSYCHOLOGY.

Psychology and the Christian Life. By T. W. PYM.
(4s. net. Student Christian Movement.)

In reading this book one is irresistibly reminded of the attitude of the old schoolmen who had to constrain their reason so that it should lead to conclusions already reached by theology. These two make a difficult pair to drive abreast: the new psychology and the New Testament. But Mr. Pym proves himself no mean charioteer, and most of his readers will be glad to note that when the two steeds appear to desire different directions the reins slacken on the New Testament side. The key-note is struck in the title of the first chapter: "Psychology and Common Sense." The all pervading nature of psychology is not merely admitted but proclaimed, and its teachings are very skilfully applied to the religious life. Clergymen and Sunday School teachers will get much help from the book as a whole. The subject is in the air, and, if no guidance is given to religious people, many will stumble. Psychological experts will shake their heads over "The Psychology of Sin," and it is not difficult to picture certain hard-bitten sectarians having something disagreeable to say about the chapters on "The Psychology of Jesus," while some plain souls will be alarmed at the collocation of "Faith and Suggestion." But the book is a healthy and honest one, which should do good. There is a bibliography in which we are surprised to find no mention of the works of Dr. Steven and Prof. Stalker.

The Psychology of Society. By MORRIS GINSBERG.
(5s. net. Methuen.)

This is a very thorough piece of work, so thorough indeed that it is likely to scare off the general reader. The student, on the other hand, will welcome it as an excellent exposition of all the more recent views on collective psychology. Nowhere in the same space can the same amount of solid matter on this subject be found in English. The criticism is keen and elaborate—one wonders if it is not too elaborate. The number of "heads" rather suggests the form of some of the old Scotch sermons, yet the reader cannot but be thankful for the resulting clearness. Whether one agrees or not with Mr. Ginsberg, one cannot fail to understand him. The most difficult and controversial chapters are those dealing with the general will and the group mind. Perhaps it would be well for writers on these subjects to deal frankly with the figures of speech they imply. It ought to be plainly stated that many, one is almost inclined to write *most*, writers deal with metaphors and think they are working with scientific concepts. Mr. Ginsberg is all for common sense here, and the reader cannot but admire the patience with which he analyses theories that it is obvious he regards as futile. The second half of the book is easier and more interesting, and is capable of more practical application. The conclusion is brief but illuminating. The whole forms a useful brake on the somewhat over optimistic treatises to which we have been lately treated.

Training in Appreciation. By N. CATTY.
(3s. net. Sidgwick & Jackson.)

Both in training colleges and ordinary school life the traditional aim in conducting a lesson has been that of imparting information,

increasing the pupil's knowledge, and developing the intellectual side of his complex nature. More recently, with the increasing vogue of practical subjects, the further aim of training the pupil in the acquirement of skill has received definite attention from teachers and from their psychological advisers. Last of all, to complete the trio suggested by the usual analysis of mind, the lesson of appreciation—the aim of which, as Miss Catty says, is essentially emotional and pleasurable—has come to the front for special treatment. In the past the intellectual aspect of literature and the practical aspects of music and art have dominated the situation, and the appreciative aspect has been mostly left to chance. From this fundamental error the present volume is a sincere and promising attempt to rescue us. Miss Catty's introduction is followed by chapters on Art by Miss E. Welch, Literature by Miss Catty and Miss Graveson, and Music by Mr. Percy Whitehead and Miss Storr. We could have wished that the practical turn given to the chapter on literature by the *questionnaire* and its application had been matched by similar sections in the chapters on art and music, where such help was needed at least as much. But the book is sound throughout, and we hope it will be widely read.

An Introduction to Psychology. By S. S. BRIERLEY.
(5s. net. Methuen.)

The title does not contain the word *New*, but we have here a complete and very satisfactory exposition of psychology from the present-day standpoint. It is interesting to note the total change in the values of the various elements as found here compared with what we find in Stout. It is true that all the old elements are present, but in very different proportions. What can the older-fashioned psychologists think when they see will, *will*, WILL, treated in a little more than a single page. On the other hand, instinct and intelligence cannot be confined within the bounds of one chapter, but break out into three. We are indeed in a new psychological world, and the reader cannot be too grateful to Miss Brierley for her safe-conduct through its mazes. The book does not specifically deal with the educational applications, only fourteen lines being set apart for this purpose; but the teacher will find educational applications suggesting themselves all along the line; practically everything within the boards of this book is of direct value to the schoolman and schoolwoman. All the newer tendencies are here grouped together and worked up into a fairly well organized whole, ending, as is inevitable, in an account of the unconscious and psychoanalysis. These subjects are dealt with deftly, sanely, and wholesomely.

The Psychology of Thought and Feeling. By Dr. CHARLES PLATT.
(7s. 6d. net. Kegan Paul.)

The sub-title of this book, "A Conservative Interpretation of Results in Modern Psychology," gives an accurate indication of its scope. Dr. Platt has practically nothing new to tell us. But he makes to the general reader an excellent presentation of the state of psychological investigation. All the new developments are included and all are treated in a critical but sympathetic way. The idea of *disposition* and *pattern* is well worked out, but with regard to *pattern* a reference is surely due to the work of Sturt. Dr. Platt now and again launches out into a vigorous line of his own, as when he claims that thought is a mere elaboration of memory, that our age is one of militant minorities, that no witness is entirely credible. The treatment is thoroughly sane throughout, and the medical bias that is so common in books by doctors is gratifyingly absent in the long chapter in which education is the subject. The Freudian scheme with its derivatives gets its proper place, and no more. Indeed, there is a rather remarkable balance maintained throughout, and the student who is in search of a full, up-to-date, and accurate knowledge of the present trend in psychology could not do better than turn to these pages.

CLASSICS.

Lingua Latina: Ludi Persiei. Original Plays for the Teaching of Latin to Middle Forms in Schools. By R. B. APPLETON.
New Edition. (2s. 6d. net. Oxford University Press.)

We have here a collection of eleven short plays meant to replace for middle forms the "spending weary hours in stumbling through a few chapters of Caesar and Livy." Before reading them, "at least a few weeks' teaching is necessary," so that pupils may understand enough Latin to follow the general drift of the story. The later plays are better than the earlier, which have too much scolding and caning, are banal, and in poor taste. Mr. Appleton has not sufficiently borne in mind the first of the two epithets of the verse on his title-page—"Non satis est pulchra esse poemata: dulcia suntu."

"Everyman's Library."—*Lucretius: Of the Nature of Things.*
A Metrical Translation by W. E. LEONARD. (2s. 6d. net. Dent.)
A spirited and living translation of the "De Natura Rerum" into

blank verse, which will probably give the Latinless reader a much better idea of Lucretius, both as poet and as philosopher, than any more prosaic version could do. Mr. Leonard has a short preface containing an apt comparison between the translator's art and that of the actor who interprets a part on the stage.

New Chapters in the History of Greek Literature. Edited by J. U. POWELL and E. A. BARBER. (10s. net. Clarendon Press.)

The present generation has brought us many finds in Greek literature, chiefly from Egyptian *papyri*, and all classical students should be grateful to the present editors for having put together the essays, by some dozen Oxford scholars, contained in this volume. The discoveries include fragments of the minor moral philosophies, a good deal of lyric poetry, a great deal of Menander and of the mimes of Herondas, and, of course, the famous *Ἀθηναίων πολιτεία*. All of these are discussed by authorities in their particular subjects, though the discussions vary from little more than *obiter dicta* of a textual nature to real literary appreciations of the author in question. The chapter on Herondas is especially interesting, and the Rev. T. W. Lumb writes on Menander in so lucid a manner that he actually enables us to form not only a just opinion of the author, but also a fine estimate of the man's personal character. The whole forms a volume which no classical scholar, anxious to keep himself up to date, can afford to neglect.

"Pitt Press Series."—*Selections from Virgil's Georgics.* Edited by Dr. J. MASSON. (4s. net. Cambridge University Press.)

Here is an excellent little volume containing all the "purple patches" out of the "Georgics," provided with notes of a literary, rather than grammatical, nature, and prefaced by an introduction which ought to make every boy possessed of the slightest literary feeling a life-long lover of Virgil. Scholars will themselves be pleased to read what Dr. Masson has to say in interpretation of Virgil's love of Nature, and classical schoolmasters will be grateful to him for providing them with a school-book which mingles the *dulce et utile* in so masterly a manner.

Alliteratio Latina; or, Alliteration in Latin Verse reduced to Rule. By W. J. EVANS. (18s. net. Williams & Norgate.)

As the title implies, this is an attempt to formulate some rule for the use of alliteration (including assonance) in Latin poetry. It is

a learned and exhaustive study, in the course of which Mr. Evans comes to the conclusion that, "subject to certain indulgences, every ictic syllable must rhyme with some other ictic syllable in its own line." In one chapter he has collected several "lines that resist"—as he somewhat naively calls the chapter—where resort has to be made to emendation in order to fit them into the Procrustean bed: a chapter which, we think, is itself a warning against taking the whole theory too seriously. The whole book lies open to the objections which the average literary reader feels inclined to make to R. L. Stevenson's essay on "Technical Elements of Style" in his "Art of Writing," i.e. it may all be true, but no author was ever aware of it! But the present volume contains much valuable material—such as evidence for pronunciation and for the length of hidden quantities—which will be welcome to all classical scholars, whether interested in Mr. Evans's theory or not. In fact, the sixty odd pages of appendixes which contain the material upon which the alliterative theory is developed are by no means the least important part of the work.

MODERN LANGUAGES.

Balzac: Five Short Stories. Edited by A. TILLEY. (5s. 6d. net. Cambridge University Press.)

Balzac, as Mr. Tilley says in his introduction, is not one of the great masters of the short story; but, though the works edited in this volume are open to much criticism from the artistic point of view, none of them will be found lacking in interest by lovers of Balzac. The first in place is "Le Curé de Tours," which everybody knows, and which is something more than a short story; it occupies very nearly half the book. The other four—"Jésus-Christ en Flandre" (which is not a story at all), "Le Chef d'Œuvre inconnu" (which contains lengthy discourses on art), "L'Auberge Rouge," and "La Messe de l'Athée" (the best of the four)—are less known. Mr. Tilley's introduction is a piece of good criticism. Not all the stories are suitable for the classroom.

"Cambridge Guides to Modern Languages."—*A Manual of the Dutch Language.* By B. W. DOWNS and Dr. H. L. JACKSON. (6s. net. Cambridge University Press.)

The aim of the compilers of this manual is, according to the preface, "to help in extending a knowledge of the Dutch language and kindling a deserved interest in Dutch literature." To attain

 of science which can be readily developed into a serious study of plant and
 animal physiology, and they appear to have carried out their intention
 excellently well."

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

this end a satisfactory "Historical Sketch" (Part I), a good survey of Dutch literature (Part II), and an excellent choice from the works of the best Dutch authors of the eighteenth and nineteenth centuries (Part IV) have been given, whilst a first-rate glossary (Part V) concludes the manual. It is when we turn to "the skeleton grammar" (Part III) that we wonder why such a meagre summary of some ten pages was included at all. That "no account of rare exceptions" has been taken is right enough, but that does not justify such statements as "short *a* = Engl. 'cut,' short *u* = between Engl. 'fur' and Fr. *eux-mêmes* (page 23); diphthongs *ei* and *ij* = Eng. 'playing' (page 26)" in the chapter on "Pronunciation." Again, the whole of the Ablaut series of strong verbs is dismissed in half a page (page 32), and the whole of the syntax in less than half a page (page 36), and of the four rules given here, two are incorrect, for (i) in main sentences (presumably equivalent to "principal clauses") the order of words is *not* the same as in English—e.g. *seven* of the principal clauses on page 72 of the manual, and (ii) in subordinate sentences (= clauses?) the verb does *not* of necessity come at the very end—e.g. *nine* of the subordinate clauses on page 67 of the manual. Would it not have been better to have left out these ten pages of grammar altogether or to have referred the reader to the much more thorough and accurate treatment of this subject in the easily accessible "Dutch Grammar," by J. Eendenijk ("Parallel Grammar Series")? Yet the manual can be highly recommended to those students who have already an elementary knowledge of the Dutch language and wish to become acquainted with extracts from some of the masterpieces of Dutch literature.

An Elementary Welsh Grammar. By Sir J. MORRIS-JONES. Part I, *Phonology and Accidence.* (3s. net. Clarendon Press.)

The long expected Elementary Welsh Grammar by Sir J. Morris-Jones has been published at last. This is a small volume of 197 pages, containing practically the same matter as his previous Welsh Grammar, so far as that deals with the modern language. The matter in this volume has been largely rewritten and adapted for the use of intermediate schools and the general student. The first 36 pages of the book are devoted to phonology, and the remainder deals with accidence in a very exhaustive and lucid manner. As might be expected, the book is written in an original and masterly manner, and nothing like it has ever appeared before on Welsh Grammar. The chief feature of the book, perhaps, is the copious examples that are taken from the works of the best early modern bards and late modern writers to illustrate and corroborate the rules. This feature makes it not only a trustworthy grammar book, but also a very interesting book to read. The writer has restored the old traditional language of the bards, and has corrected all the false etymological theories formed in the early part of the last century. This book supplies a need that has been long felt, and should be warmly welcomed by all teachers of Welsh, and those who wish to make a thorough study of the Welsh language.

Annotated Renderings of 100 Passages selected from "A Manual of French Composition." By R. L. GRAEME RITCHIE and JAMES M. MOORE. (10s. Cambridge University Press.)

In this work Prof. Graeme Ritchie and Mr. J. M. Moore supply renderings of about one-half of the passages given in their manual, together with excellent and stimulating notes. The versions are manifestly the production of experienced teachers, who have made fellow-workers of their students, and have turned the French composition classroom into an intellectual workshop for the hammering out of ideas in new forms. Other distinguished teachers, such as M. Berthon, Prof. Kastner, Prof. Legouis, and Sir Donald MacAlister, have contributed versions. The method followed by the authors is one of research. The best French writers—those, at least, which students are likely to know—are referred to, and followed in the choice of expressions best fitted to convey the meanings required. Explanations are brief and to the point, and variants are frequently given. Reference is constantly made to parallel passages in both languages. The book is conveniently printed, the numbers of the passages in the original manual being given, not only over each translation, but also on the heading of each right-hand page. A further convenience would be an index of the passages, with the English and French titles, and the names of the authors. There is a good index of the words mentioned in the various notes. Used in conjunction with the manual, this book should be an extremely valuable aid in the study and teaching of advanced French prose composition; it is, perhaps, the only English work of the kind fit for university use.

"Hossfeld's Series."—*Italian Commercial Correspondence and Technicalities, &c.* By W. R. CORNETT. (4s. 6d. net. Hirschfeld.)

This handbook contains a large number of useful commercial phrases and letters. But, at a time when a real improvement is

taking place in the style and matter of commercial correspondence, it is a pity to admit, in the specimens included of English letters, so many clumsy and ill-turned phrases.

La Comedia Nueva, por Leandro Fernández de Moratin. With Introduction, Notes and Vocabulary by H. C. L. BALSHAW. (3s. 6d. Methuen.)

The comedies of Moratin make as good a starting point for the student of Spanish as do those of Goldoni for the beginner in Italian. The *Comedia Nueva* is in itself well written and amusing, and also throws considerable light on the state of Spanish literature at the end of the eighteenth century. The present edition gives a good introduction, notes, and glossary, and could be used by a beginner with no further supplement than an elementary grammar. The editor's preface and notes are good and clear.

ENGLISH.

"The Clarendon Series of English Literature."—(1) *Milton, Poetry and Prose.* With Essays by Johnson, Hazlitt, and Macaulay. Edited by A. M. D. HUGHES. (2) *Cowper, Poetry and Prose.* With Essays by Hazlitt and Bagehot. Edited by HUMPHREY S. MILFORD. (Each 3s. 6d. net. Clarendon Press.)

To combine in a volume of about 200 pages "a representative selection from a great author with the best criticism of their work," as the general introduction puts it, is extremely difficult. So small is the space at the editor's command that one or either element must suffer. In the case of these two volumes the author comes off badly: is, in fact, in danger of being swamped by the criticism. The plan lands the editors in contradictions. To the student who wants three critical essays on Milton, "Comus" with 400 lines taken out of the middle is useless, as are a few fragments of the "Task" to the reader who desires to study Cowper in the light of Bagehot's criticism. These volumes, indeed, we fear are only too likely to stimulate that very tendency which, according to the general introduction, they are designed to counteract—namely, the tendency to "put before the student, not the writings of the greatest authors, but books about them." A much larger acquaintance with the writings than can be obtained from these volumes is necessary before the books about them can be of any value to the student. The scheme works most successfully in the case of Milton. Johnson, indeed, was incapable of appreciating Milton, but Hazlitt's lecture is stimulating, while Macaulay's brilliant essay is the best introduction to the poet's personality that can be placed in the hands of youth. Of Cowper, on the other hand, neither Bagehot nor Hazlitt had any real understanding. Bagehot's view that "the mind of Cowper was, so to speak, naturally terrestrial" is enough of itself to put him out of court. Mr. Milford speaks of his author's "continued popularity," but a mutilated and eviscerated Cowper is all we care about now. In Cowper, the pleasant letter-writer and composer of agreeable trifles, we still take some interest, but Cowper the moralist and preacher, Cowper the sufferer, diseased in mind, oppressed by the horror of an awful delusion, is a bore to us, and the editor keeps him pretty well out of sight. It is a new kind of bowdlerization. Mr. Milford, we note, prints "The Loss of the Royal George" in three twelve-lined stanzas, as he did in his Oxford edition. Cowper arranged it in three stanzas of six long lines each, as everyone who has seen the manuscript at the British Museum knows; Hayley, in whose biography of the poet the lines first saw the light, printed them in four-line stanzas; and every subsequent editor, except Mr. Milford, has slavishly followed Hayley. Mr. Milford's arrangement, though not that of Cowper—the long line would certainly be awkward to print—has the merit of showing the tripartite division of the verses. The poem has found admirers amongst good judges, but we doubt whether anyone but Mr. Milford has called it "sublime." It is not generally known that it was written for music. "Take it to your organ," says Cowper, in the letter to William Unwin which accompanied the poem, "like most songs, it depends much upon the music." For the printing of the second line in the form, "The brave! that are no more," we have found no authority.

"The World's Classics."—*English Prose.* Chosen and Arranged by W. PEACOCK. In Five Vols. Vol. III: *Walpole to Lamb.* (2s. 6d. net. Milford.)

An agreeable set of extracts, printed on thin paper, the whole 552 pages and covers weighing only eight ounces. Mr. Peacock has drawn upon authors seldom represented in collections of this kind; for instance, Adam Smith (who is certainly one of the greatest masters of lucid exposition in English literature), Reynolds, Paley, Mackenzie, Cobbett, Mungo Park, Ann Radcliffe, and Maria Edgeworth.

Edited, with introduction, exercises, and vocabulary, by A. WILSON-GREEN, M.A. 4s 6d net. Cambridge Modern French Series.

"An excellent addition to the Cambridge Modern French Series. De Vigny's clear cut style, his mode of thought, and his ethical preoccupations, make him an admirable choice for use in British schools. . . . Concise and very helpful notes, intelligent exercises, and a vocabulary add greatly to the usefulness of the book."—*The Scottish Educational Journal*.

Balzac.

Five Short Stories. Edited by ARTHUR TILLEY, M.A., Fellow and Lecturer of King's College, Cambridge. Crown 8vo. 5s 6d net. Contains:—*Le Curé de Tours*, *Jésus-Christ en Flandre*, *Le Chef-d'Œuvre inconnu*, *L'Auberge rouge*, and *La Messe de l'Athée*.

These five stories are very different in character: the first is a study of provincial life and everyday human passions, the second is a mediæval morality, the fourth is a story of a crime, the third and fifth are notes of psychological cases. But all alike have the same arresting quality, the same power of holding captive the imagination.

Cambridge Plain Texts: Italian.

With introductory notes by Professor THOMAS OKEY. Five volumes are now ready, 1s 6d net each.

Rosmini: *Cinque Piaghe*. Gasparo Gozzi: *La Gazzetta Veneta*. Alfieri: *La Virtù Sconosciuta*. Leopardi: *Pensieri*. Mazzini: *Fede e Avvenire*.

Each volume consists of 50 to 80 small octavo pages of text, preceded by a short biographical note on the author.

A Manual of the Dutch Language.

By B. W. DOWNS, M.A., and H. LATIMER JACKSON, D.D. Crown 8vo. 6s net. Cambridge Guides to Modern Languages.

"This is an admirable introduction to a language which should be better known in England for the sake of the fine literature that is mostly inaccessible to those who do not read Dutch. . . . The authors give a brief outline of literary history and a skeleton grammar, and then wisely devote two-thirds of their space to extracts from the Dutch Bible and from well-known Dutch authors, with a glossary."—*The Spectator*.

Homer: Iliad, Book XXI.

With introduction, notes, and vocabulary by A. C. PRICE, M.A. Fcap 8vo. 4s 6d net. Pitt Press Series.

"We have rarely come across so small a book with so excellent or scholarly an introduction. Mr Price deserves the gratitude as well as congratulations of all teachers of classical Greek upon the results of his labours upon the Iliad of Homer."—*Education*.

The Provinces of Ireland.

A new series, under the general editorship of GEORGE FLETCHER, F.G.S., M.R.I.A., of the Department of Agriculture and Technical Instruction for Ireland, consisting of four volumes—on Ulster, Munster, Leinster, and Connaught—and a larger volume dealing with Ireland as a whole. Crown 8vo. With maps, diagrams, and illustrations.

The volumes on *Ulster* and *Munster* are now ready, price 6s 6d net each. A prospectus giving particulars will be sent on request.

New Mathematical Pastimes.

By Major P. A. MACMAHON, R.A., D.Sc., Sc.D., LL.D., F.R.S. Demy 8vo. 12s net.

The author has devoted much time and thought of recent years to the development of "Permutations and Combinations." During that time he has constructed, for use in the home circle, various sets of pieces, of elementary geometrical shapes, based upon these ideas, and now brings them together for the first time, "with the object of introducing, in a wider sphere, what he believes to be a pleasant by-path of mathematics which has almost entirely escaped the attention of the well-known writers upon mathematical recreations and amusements."

Elementary Analysis.

By C. M. JESSOP, M.A. Crown 8vo. 6s 6d net.

"The first part of this book deals with the elements of plane co-ordinate geometry, and the ideas and methods derived therefrom are made use of in the second part to develop the rudiments of the theory of the calculus. This latter part contains an explanation of first principles, together with the differentiation and integration of the simpler functions and simple applications."—*From the Preface*.

Alternating Currents.

Parts I and II. By C. G. LAMB, M.A. Demy 8vo. Part I, 5s 6d net. Part II, 7s 6d net.

Parts I and II are the first of a short series of notes intended primarily to assist a student in writing up his lectures. They are of the nature of a full explanatory syllabus of the course of lectures given to third-year students in the engineering laboratory.

Inorganic Chemistry.

By E. I. LEWIS, M.A., B.Sc. With an introductory note by Sir RICHARD THRELFALL, K.B.E., F.R.S. Third, revised and enlarged, edition. Demy 8vo. 9s net.

"This book deserves the widest recommendation as a sound and interesting introduction to the subject. . . . It deserves a high place, not only in the school, but generally as an introductory first course."—*Nature*.

The Study of Geological Maps.

By GERTRUDE L. ELLES, D.Sc., Fellow of Newnham College, Cambridge. Crown 4to. With 7 plates, 1 map, and 64 figures. 12s net.

"Geologists and teachers of geology in England will welcome this small book from the pen of so experienced a teacher and a field worker as Miss Elles, and the more so since, as stated in the preface, it is based on lectures given by her for many years to honours students in geology, and has therefore been already put to the proof. . . . The book is very well illustrated with diagrams, sections, and maps, and a series of plates of block diagram drawings helps considerably in expounding the relation between surface relief and geological phenomena."—*The Geological Magazine*.

The Economics of Everyday Life.

A First Book of Economic Study. By Sir HENRY PENSON, M.A., Lecturer in Modern History and Economics at Pembroke College, Oxford. Part II. Large crown 8vo. 4s net.

The first part of this work was devoted to the consideration of effort, exchange, and income. Part II shows how the income thus obtained is applied to the satisfaction of human wants.

The Epistle to the Hebrews.

In the revised version. With introduction and notes. By A. NAIRNE, D.D. Cambridge Bible for Schools and Colleges. Fcap 8vo. 7s 6d net.

"He must be a specially dull reader who does not find much to hold his interest in this book. It is just the sort of commentary which lads in the upper forms of our modern schools might be expected to read with sustained interest."—*The Times Educational Supplement*.

FETTER LANE, LONDON, E.C.4: C. F. CLAY, MANAGER

ordinary teaching laboratory. In these days of ready-made apparatus, the student is apt to be so spoon-fed as to be utterly incapable of carrying out manipulative work of the simplest type. The course of glass-blowing before us should be useful in inculcating one very desirable avenue of personal dexterity. With ample illustrations and many practical hints, Mr. Bolas describes all the simple procedures of elementary glass-working, and even includes such professional details as the methods in vogue for the blowing of vacuum tubes. An excellent feature is the dissection of complex examples of the glassworker's art.

Aids to Chemistry. By WILLIAM PARTRIDGE.
(6s. net. Baillière.)

"The Student's Aids Series" has been known to many generations of medical, dental, and pharmaceutical students, and the present edition of "The Aids to Chemistry" contains in a compact pocket form a horde of statements likely to be of use to the examinee. In this type of manual accuracy should be of first importance, yet the author describes petroleum as "a thick yellowish-green liquid with an unpleasant fishy odour," whereas the vast majority of mineral oils bear not the slightest resemblance to this peculiar definition. Ionization is stated to be "a dissociation of an electrolytic order of the radicles of a compound when this is dissolved in water"; whilst the equation (page 50) $\text{Na}_2 + 2\text{H}_2\text{O} = 2\text{NaOH} + \text{H}_2$ is extraordinarily inaccurate. Altogether, this book is one of a type which, fortunately, is nearly extinct.

The Elements of Physics and Chemistry. A Practical Course for Middle Forms. By Sir RICHARD GREGORY and A. T. SIMMONS, with the assistance of F. W. HODGES. (4s. 6d. Macmillan.)

The book has that attractive form with which the publishers have made us so well acquainted. The figures, numbering 186, and the copious collection of examples for the students to work, will make it of great service in the middle forms of secondary schools. The usual arrangement of subjects is adopted—properties of matter, heat, light, sound, magnetism, electricity, and chemistry. In the earlier part of the book the student is told that "in ordinary language this distinction between mass and weight is not made," and in the immediately following chapters this distinction is entirely abandoned. This is very unfortunate, as the teacher should endeavour, both by precept and example, to keep these two fundamentally different ideas clearly separated. Again, on page 48, the confusion between force and pressure is evident, for the student is told that the "total pressure" is dependent upon the area, and the expression, "pressure upon unit area," is used. When the teacher must point out such errors, the student is bound to lose confidence in either the teacher or the text-book. With a few such blemishes removed, the book would serve admirably the purpose for which it is intended.

ECONOMICS.

A Text-book of Economics. By M. BRIGGS.
(8s. 6d. net. University Tutorial Press.)

Mr. Briggs has produced a serviceable text-book on economics. His aim has been to cater for the needs of students working for the London University Intermediate Examinations in Economics and in Commerce, and it must be admitted that he has succeeded in his object. The book is a businesslike, straightforward introduction to the subject, perhaps stronger in descriptive economics than in economic analysis. But this may be an advantage to elementary students. The whole ground is amply covered, providing a good foundation for further study. Mr. Briggs has apparently read widely, with the result that his outlook, as reflected in this book, has a breadth and a freshness which are not often found in text-books of this kind. The glossary of economic terms at the end of the book is a useful innovation, but the index might with advantage have been fuller. The list of books at the end of each chapter ought most certainly to have given specific references either to chapters or pages dealing with the subject to which they are appended.

The Economics of Everyday Life: a First Book of Economic Study. By Sir T. H. PENSON. Part II. (4s. net. Cambridge University Press.)

The first part of Sir T. H. Penson's sound and simple exposition of fundamental economic truths dealt with man's wants and with the efforts, direct and indirect, which man makes to satisfy them. In other words, it discussed the elementary problems of production and exchange. In the present part the corresponding problems of consumption are treated. The principles of spending and saving are considered; the question of taxation is raised and answered; the functions of association and co-operation are displayed. Nothing but praise can be given to this able and sensible little work. It ought to be circulated widely among thoughtful leaders of labour. A popular edition of the two parts in a single volume at half-a-crown would be an invaluable antidote to prevalent economic error.

POPULAR RELATIVITY.

- (1) *The Ideas of Einstein's Theory; The Theory of Relativity in Simple Language.* By Prof. J. H. THIRRING. Translated by R. A. B. RUSSELL. (5s. net. Methuen.)
- (2) *Relativity and Gravitation.* Edited by J. MALCOLM BIRD. (8s. 6d. net. Methuen.)
- (3) *The Rudiments of Relativity.* By Prof. J. P. DALTON. (5s. Wheldon & Wesley.)

Interest in relativity seems to increase rather than diminish. Partly, no doubt, this is because the subject appeals to the element of wonder which is innate in all rational beings; but there is a more important reason for the present popularity of books dealing with Einstein's researches. A widespread feeling exists that our whole outlook upon the external world will require amendment if the new ideas are accepted. This is not merely a question of the truth, or otherwise, of a scientific theory, but one of the adoption of a new view of Nature, involving a revision of our philosophy. The work of Prof. Whitehead, in particular, has emphasized this aspect of the doctrine of relativity. The three books before us, however, do not profess to touch upon these wider aspects of the subject, but attempt to give, without mathematical complications, an outline of Einstein's views and conclusions.

(1) Prof. Thirring, of the University of Vienna, has described very ably the leading ideas of Einstein's theory. The book is divided into two nearly equal parts, which describe the two stages of development: the Special Theory of relativity formulated in the year 1905, and the General Theory built up between 1907 and 1915. The Special Theory is so called because it deals with the relativity of a special kind of motion, viz., uniform rectilinear motion. There are two foundation pillars of this theory: the first is the principle that it is impossible to ascertain the existence of such motion within a closed system (i.e. without reference to the surroundings), and the second is the principle of the constancy of the velocity of light (i.e. the velocity of light *in vacuo* is quite independent of the state of motion of the source of light). The General Theory is of a far more daring character, and cannot claim the same degree of certainty as the earlier theory. It extends the principle of relativity from the case of uniform to the case of non-uniform motion, and asserts the equivalence of a homogeneous gravitational field and an inertial field produced by a constant rectilinear acceleration. This leads to a new theory of gravitation, and to the curvature of rays of light in a gravitational field, and in both cases observation decides in favour of Einstein. The book is an admirable one, and the translation is good.

(2) In 1920, the *Scientific American* announced a prize of 5,000 dols. for the best popular essay on the Einstein theories, and in this volume Mr. Bird has given an account of the contest, and compiled an introduction to the selected essays here published. There is a useful account of the space-time continuum, which forms Minkowski's world of events, and it is shown how this fits into Einstein's structure. To give an adequate elementary exposition of relativity in the small compass of 3,000 words would have required a miracle, and it is not surprising that the competitors have, for the most part, emphasized particular aspects of the theory. Some of the essayists bear well known names, and contribute papers of remarkable interest; for our own part, we prefer that by Prof. de Sitter on "Space, Time, and Gravitation," which is a real work of art. Probably Einstein himself would not have won the prize in this competition!

(3) Prof. Dalton has not been hampered by a word limit, and in these four lectures he has given an account of the rudiments of relativity which can be strongly recommended. He has not been content merely to reproduce the ideas and illustrations of earlier writers, but has thought out these questions for himself, and has not been afraid to adopt a critical attitude where that seemed necessary. Relativity "has made us think; it has brought home to us the limitations of the human understanding, and has made us more critical of any scientific dogmatism."

GEOGRAPHY.

The New World of To-Day. By A. R. H. MONCRIEFF. With Economic Data supplied by Prof. L. W. LYDE, and a Series of Maps, to date, by J. BARTHOLOMEW & SON, Ltd. Vols. III and IV. (15s. each volume. Gresham Publishing Company.)

These attractive books are the third and fourth volumes of a series dealing with the world as it is to-day. Written in a popular style, they contain a vast amount of interesting information of these great continents (North and South America). The author displays not only a wide geographical and historical knowledge, but also an intimate knowledge of the habits and customs of the various races of people who come under his notice. Both volumes are profusely illustrated with excellent pictures. Several large-scale maps in colour, from the firm of J. Bartholomew

(Continued on page 60.)

Britain and Greater Britain in the Nineteenth Century. By E. A. HUGHES, M.A. 6s net.

Social Life in Britain from the Conquest to the Reformation. A Series of Extracts from Contemporary Writers. Compiled by G. G. COULTON, M.A., St Catharine's College, Cambridge. Re-issue, with an index and 40 additional illustrations. Demy 8vo. 24s net.

A Short History of the Expansion of the British Empire from 1500-1920. By Professor W. H. WOODWARD. Fourth edition. With 10 maps. 6s 6d net.

An Outline History of the British Empire from 1500-1920. Third edition. By the same author. With maps. 4s net.

A Picture Book of British History. Compiled by S. C. ROBERTS, M.A. Vol. I, to 1485. With 190 illustrations. 7s net. Vol. II, 1485-1688. With 200 illustrations. 6s net. Also in loose sheets in portfolios at the same prices.

A History of Modern Europe from the Middle of the Sixteenth Century. By JOHN E. MORRIS, D.Lit. Third impression. With 8 maps. 5s 6d net.

Europe in the XIX Century, 1815-1914. By the same author. With 8 maps and 3 pedigrees. 5s 6d net.

FETTER LANE, LONDON, E.C.4: C. F. CLAY, MANAGER

& Son, show the topographical and political features of North and South America. At the end of each volume Prof. Lyde supplies a very useful commercial and statistical survey of the continents. Taken as a whole, these books will appeal both to the geographical student and to the ordinary reader, and a copy of them might with advantage be placed in every school library for general reading and for purposes of reference.

"Longmans' Geographical Series."—Book III: *The World for Senior Students*. New Edition. (7s. 6d. Longmans.)

This well known book has passed through many editions, and the present one (1921) has been brought up to date, both as regards subject-matter and maps, in accordance with the terms of the Peace Treaty. Each new State is described in a separate section. In spite of the many improvements that have been introduced into the work, the book nevertheless belongs to the old-fashioned type of geography, as the various chapters are made up very largely of lists of capes, mountains, towns, counties, &c. Many of these lists are quite unnecessary, as the same features are shown clearly on the maps which accompany the text.

"The Excelsior Geographies."—Part I: *The Sun's Influence upon Life on the Earth*. By E. R. SHEARMUR. (2s. net. Bacon.)

The first half of this book deals with temperature and rainfall; the second half with vegetation and products. All these distributions are carefully explained, and useful exercises are given at the end of each chapter. Nine coloured maps, with clearly printed names, illustrate the lessons, and there are also diagrams and pictures.

Cassell's New Atlas. Edited by GEORGE PHILIP. (21s. net.)

The publishers of this atlas are to be congratulated on producing a work both up to date and full of detailed information. Politically, the atlas shows the regrouping of the peoples of the world that has resulted from the war; and, historically, the evolution of the modern European States and the readjustment of boundaries. Large-scale tourist maps, and maps showing land and sea routes with distances by rail and time, are also included. Altogether, there are 144 plates, prepared by the firm of George Philip & Son, of the London Geographical Institute. The maps are beautifully coloured, and every name is distinctly printed. An index of 35,000 place names, with latitude and longitude, is given at the end of the work. For so excellent a production, the price is extremely moderate.

A Secondary School Course in Geography. By A. B. ARCHER. Book II: *The Continents of the South*. (4s. 6d. net. Heinemann.)

This is the second volume of a series designed to provide a four-years' course in geography for secondary schools. The three southern continents are carefully described, with special reference to regional geography; and in separate chapters the historical and political factors are dealt with. In Section II, some of the principles of geography—such as the movements of the earth, the seasons, and climate—are discussed. The lessons are illustrated with pictures, maps, and diagrams.

A School Economic Atlas. By Dr. J. G. BARTHOLOMEW. Fifth Edition, Revised. (6s. net. Oxford University Press.)

This atlas contains sixty-four pages of maps prepared by Dr. Bartholomew. The maps, well drawn and clearly printed, show the distributions of the various economic productions, trade routes, climatic conditions, and other features of importance in commercial geography. In a useful introduction, Prof. Lyde explains the maps, and adds much valuable information in economic geography. For ordinary school use, the binding in limp cloth is hardly durable enough.

"Peeps at Many Lands."—*Madagascar*. By H. A. RIDGWELL. (3s. Black.)

This book, illustrated with eight coloured pictures, contains a good description of a most interesting island. The conditions under which men live in the capital and in the villages, the social customs, the arts and crafts of the Hova people, are all described in an attractive style.

Geography for Senior Classes. By E. MARSDEN and T. A. SMITH. (7s. 6d. Macmillan.)

The two earlier volumes by the same authors have already been used successfully in the lower forms of secondary schools, and teachers will welcome the present volume, which is intended for the higher forms, and completes the series. It covers fully the course in physical and political geography for the general school and matriculation examinations. All who have been concerned with its production have done their work well, and the result is a remarkably good text-book. There is a profusion of excellent coloured maps, diagrams, and pictures, and a useful collection of questions selected from recent examination papers.

Map Projections. By A. R. HINKS. Second Edition, Revised and Enlarged. (12s. 6d. net. Cambridge University Press.)

The theory of map projections, when studied from the purely mathematical point of view, lends itself to a great variety of intricate problems of considerable interest to the mathematician, but of little use to the cartographer. The author, who is not only an eminent mathematician, but also an able geographer, wisely restricts his main investigation to those projections which are most suitable for making good maps, and in each case he explains clearly how the map net can be accurately determined. Particular mention may be made of his thorough treatment of the conical projection (both in its simple form and with two-standard parallels) and the various zenithal projections. A few specimens of curious projections are given; for example, that of the sphere on the circumscribed cube, and the transverse Mollweide's equal area projection devised by Dr. Close. In this edition there are several new chapters which deal with projections for topographical maps on a large scale, with the history of map projections, and with other parts of the subject not adequately described in the first edition. As a really practical work, this book can be thoroughly recommended to teachers who include cartography in their course of instruction, and to students who are preparing for the higher examinations, such as the First Division of the Home and Indian Civil Service.

"Edina Geographies." By T. FRANKLIN.—Book I, *The British Isles* (1s. 8d. net); Book II, *Europe* (1s. 9d. net). (Johnston.)

These little books, of about seventy pages each, contain a great deal of information, although some of the paragraphs contain rather too many names. The physical geography is well described in both books, particular attention being given to climate and vegetation. The references to political geography include the recent changes in the map of Europe.

MISCELLANEOUS.

"The World of To-Day."—*Foreign Governments at Work*.

An Introductory Study. By H. FINER. (2s. 6d. Milford.)

This is a book of the stimulating sort, for study circles or for those who are attending university extension lectures on political subjects, and it is enriched accordingly with bibliographical notes. Useful throughout, it is most useful when explaining the New Constitution in Germany, where contemporary history is driving home the lesson that it is easier to formulate general principles than to apply them practically. In the United States, as we learn, "The demon of the people has so developed that it presses against the bars of uncongenial institutions: these must be refashioned." The demon that made the cage may be trusted to enlarge it so far as is necessary for comfort. Like many other modern reformers, our author demands a new education of the whole people, adolescent and adult. Until this has been prepared, we advise commencing politicians to get as much as they can of the old. It will tell them, among other things, that money is not wealth; and again, that "the political association has for its end the performance of noble actions, and not a mere living-together." Aristotle is not wholly obsolete.

Essays and Addresses. By Prof. GILBERT MURRAY. (10s. 6d. net. Allen & Unwin.)

Prof. Gilbert Murray is known as a man of wide and accurate knowledge, of a powerful and delicate literary art, and of a high courage. These possessions he here applies to the consideration of some leading topics in history, literature, religion, and politics. The war fever at Athens towards the end of the fifth century B.C.; the changing attitude of Euripides to life as shown in his plays; the psychological basis of stoicism; how poetry is both a mimesis and a criticism of life, the rival views predominating in certain poets; literature as a revelation rather than a collection of "gobbets"; the soul and its struggle with force; self-interest and the desire for self-approval as powers in politics; the ultimate solidarity among the peoples of the earth; the spirit of unmixed hatred towards the existing World Order—this very inadequate summary of the subjects treated shows the impossibility of the reviewer's task. We are confined to a few brief comments. The serenity of Euripides' earlier plays is contrasted with the bitterness and violence of the later ones. In the last of all, the "Bacchae," "he shows a peculiar, and almost enthusiastic, interest in a sublimation of Bacchic doctrines." We once heard Dr. Verrall, to whom Prof. Murray refers with approval on a special point, discourse with his wonderful eloquence on the notion that Euripides, brought into touch with Bacchism in Thrace, was fascinated by the possibilities of a religion of enthusiasm, a thing not known at Athens. To the student of Euripides this essay will be profoundly interesting. He will probably be reminded of the indications that Shakespeare's outlook on life changed in a somewhat similar manner, but the note

(Continued on page 62.)

HOW THE NORMAL MEETS YOUR CASE

If you are attending Oral Classes of any kind, a Normal Course will *supplement* the tuition you are getting and enable you to make the most of it. This does not imply extra work on your part unless you wish, but it will enable you to see whether you are being taught on right lines, and to act accordingly.

* * *

If you live in a remote district, a Normal Course will bring you the best modern tuition; thus the disadvantage of residence is removed.

* * *

If you have failed and wish to sit again, you will find that the Normal tutors will soon discover the cause of your non-success. They will then immediately set to work to strengthen your weak subjects, so that a pass, at least, is practically assured. In many cases the Normal has changed a Failure into a Pass with Distinction.

* * *

If you have abundance of time to prepare for the examination you will find that the Normal provides a course exactly suited to your requirements.

If you suddenly make up your mind to sit for the examination, and leave yourself but little time for preparation, the Normal Corr. College will push you on as fast as your capability or your inclination will permit.

* * *

If for any reason you may have to break the continuity of the tuition, your particular course may be resumed at any time exactly where you left off.

* * *

If you have entered for a course and find it is rather beyond you, the Normal Corr. College will permit you to exchange for another course without additional expense.

* * *

If you have tried other colleges in vain, we extend our sympathy and promise that if you join the Normal we will make special efforts in your case, so that the result of your next examination may be the usual "Normal" result.

NORMAL CORRESPONDENCE COLLEGE,

Melford Road, East Dulwich, London, S.E.22.

of reconciliation on which he ended is different indeed from the mystic unification of the human and the divine suggested by Euripides. The essay on Poesis and Mimesis contains two eloquent pages on Ovid: "a poet utterly in love with poetry. . . . His criticism of life is very slight; it is the criticism passed by a child, playing alone and peopling the summer evening with delightful shapes, upon the stupid nurse who drags it off to bed. And that, too, is a criticism that deserves attention." And after some suggestive remarks on "the extraordinary diversity of style and of aim which results naturally from the use of different languages," especially as regards verbal stress and word-order, our power of mimesis is presented as the basis of our power of idealism, the great guiding force in the upward movement of humanity. This largeness of view is characteristic of Prof. Murray. To him, literature is the record of the triumphs of the human soul. It is a revelation, not an amusement, not an affair of technique, not a source of curious information, not even an assemblage of pleasing friends. Those are the delights of "the really cultured people," those who like Lamb's "Essays" and "Lavengro," and Burton's "Anatomy," and Evelyn's "Diary," and the "Religio Medici," and the "Literary Supplement"—those, as we read elsewhere, who are "proper average educators." It is well for us to be reminded occasionally that, despite our culture, we are, however proper, merely average, if we are incapable of at least sympathizing with the larger view. We know no book better calculated than this to put the really cultured person out of conceit with his culture; our inferiority stares us in the face as we read and ponder.

"We're borne aloft, and leave the crowd,
We sail upon a morning cloud,
Skirted with dawning gold."

But even culture is better than hoggishness, and are we all such dull dogs that we are given Evelyn instead of Pepys? In the more purely political essays it is clear that Prof. Murray believes, with Browning, that "God's in his heaven," but he holds it to be our business to make "all right with the world." Twice he quotes the Stoic description of men as "ministers of the Divine Providence." And so we take leave of a most inspiring book.

OCCASIONAL NOTES.

AN impressive protest against the reduction of the Treasury grant to the universities has been sent to the Prime Minister from "the sister universities of Birmingham, Durham, Leeds, Liverpool, Manchester, and Sheffield," and the Vice-Chancellors of Oxford, Cambridge, London, and other universities have notified to the Prime Minister their concurrence in the letter. The claims of the university to a full measure of public support are set forth in weighty language. Universities are the recruiting and training grounds for the great professions and for the public services. They educate chemists, physicists, steel experts, civil, mechanical, and electrical engineers, architects, and other workers and leaders in industry. They advance science and extend the frontiers of knowledge in all departments of study. Further, it is stated that they are all short of the means of developing their usefulness. Fees have been raised, strict economy has been practised, £1,175,000 has been received from benefactions, the local authorities have nearly doubled their grants during the last nine years, but still the universities are short. Germany, the United States, and Canada all think more of their universities and do more for them than we do. Finally, the Government are reminded that they themselves encouraged the universities to hope that what they raised locally would be met by a corresponding increase in Treasury grants. It is an able document, and we hope it will receive the consideration that it deserves. Even those who care nothing for wisdom and knowledge may feel the force of the plea that to support universities is "good business."

MR. HAROLD LASKI, on January 5, addressed the Society for Educational Research on "The Needs of the Modern University." He dealt particularly with its needs in the matter of political science. A thorough reformation, it appears, is essential, more particularly in the cases of Oxford and Cambridge. Mr. Laski blames them, first, for giving any information at all; secondly, for *not* giving information respecting the political institutions of America and the British Dominions. The business of the university, it seems, is not to supply facts, but to furnish an instrument of thought, and at the same time it is to analyse present-day conditions and to work backwards from them into the past. In order to compel universities to carry out these two incompatible duties radical reconstruction is necessary. The universities—at any rate, Oxford and Cambridge—cannot be trusted to effect this themselves. No Guild-Socialist idea of self-determination will do for them. The government of a university should no longer be left so largely to the teachers themselves as had been the case with Oxford and Cambridge. Mr. Laski was a teacher himself, but he knew no body of people, men or women, who were less creative in relation to experiment in their work than teachers. Hence, not for dons the freedom from external control claimed by workers! Let not Oxford and Cambridge hope to retain equality with the Miners' Federation or the National Union of Railwaymen in the new Soviet Republic!

THE Master of Balliol delivered a presidential address on "Science and History" to the Science Masters' Association on January 4. The generalizations concerning history did not go beyond the safe formula that the study of the records of the past trains the judgment, quickens the imagination, develops the civic sense, and generates hope. The last section contained the only matter seriously controversial—Is history a science? No, says Mr. A. L. Smith; it is not. History cannot predict and science can. In other words, a science is determined not by its nature or by its methods, but by its achievements. This is an indefensible criterion. It rules out from the list of the sciences such branches of investigation as ethics, politics, psychology, æsthetics—all the contents of mental and moral philosophy, in fact. It threatens to expel even meteorology, seismology, and other recondite branches of natural philosophy; for the prophetic power possessed by the expert in storms and earthquakes is still small. No; science is a matter of method and not of result. History, the record of human society, equally with the phenomena of Nature, is capable of being studied with an impartiality of spirit and an exactness of research which fully entitles it to be regarded as a science, quite irrespective of whether or not it ever arrives at those "laws" which Comte predicted and Buckle professed to expound.

THE Yorkshire Ladies' Council of Education have been putting to themselves some plain questions regarding the outcome of half a century of women's higher education. Prof. Gordon, of Leeds, who was invited to open the discussion, declared that, although many women had taken brilliant degrees and had displayed receptive powers of the highest order, they had

done practically no original or creative work, and had added nothing to knowledge. If, said he, they produced any work, the chances were a thousand to one that it would be purely imitative and reproductive. And yet women certainly had capacities of insight and interpretation peculiar to themselves and denied to men. Prof. Gordon expressed himself in terms that were perhaps rather too sweeping and unqualified; yet the amount of error or exaggeration in his statements was probably too small to affect their validity seriously. So much was indeed admitted by the ladies who subsequently joined in the debate. Nor do we think there is much in the contention of one of them that a woman cannot have a wife to keep inviolate her hours of original work. If she can't have a wife, she can have a housekeeper; besides, it is very well known that the original work of some men is done amid domestic distractions and often amid domestic misfortunes. We hope the Ladies' Council will adhere to their intention to pursue the subject, with a view to reach the really fundamental causes of the difference in question.

THERE is no doubt that, vast as have been the results of the efforts of the pioneer women of half a century ago, those efforts were made on the assumption

**A Women's
University?**

that whatever is best for men must necessarily be best for women. This assumption, natural to women who were mostly bred in an academic atmosphere, is precisely what calls for the most careful and unbiased investigation. One would have supposed, on *a priori* grounds, that where marked physical differences exist, marked mental differences must inevitably accompany them. The question is not, let it be observed, whether opportunities of higher education should be open to women. No one, we think, whose opinion is worth having, would desire to reopen that question. The point is whether there should be, at any rate, alternative avenues of distinction more appropriate to the tastes and capacities of women. There is evidence that the public mind is not at rest on the subject of identical courses of secondary education for boys and girls, and the subject of identical academic courses for men and women may also have to come to the front. We cannot pretend, however, to sympathize with Prof. Gordon's idea of a separate university for women. We think the balance of argument is distinctly against that view. We prefer a system of diversity in unity to two separate systems. Without closing any of the doors now open to women, we would open others which many of them, in time perhaps most of them, might choose. That, as was pointed out by one of the ladies on the occasion above described, women have invented the systematic and scientific teaching of the household arts and of the art of nursing is a fact not without significance. The broadening of women's opportunities so that they may use their full powers without being forced into discouraging competition with men is perhaps what is needed.

THE classicists seem engaged in a competition to decide who can make the most extravagant claims for their favourite subject. Lord Milner did pretty

**"Booming" the
Classics.**

well when he said that "Graeco-Roman culture was still the strongest spiritual bond between European nations." Mr. Asquith's identification of the classics and the humanities

was, in our opinion, too stale and trite an extravagance to deserve a prize. Much better was the doctrine advanced in the "Legacy of Greece," that classical study is the best cure for Bolshevism. But all these competitors have been far outdistanced by Dr. J. W. Mackail, with his declaration that "the classics were, and were likely to remain till the end of time, the highest that mankind had done in the way of truth and beauty." The question whether Greek ideas of beauty in art and literature are superior to modern ideas is one of taste, and, therefore, not susceptible to argument; but what is a matter of fact is that the range of beauty in Greek work was an extremely narrow one, and that in this country at least their forms of art and literature have never found any wide acceptance. In his assertion about "truth," Dr. Mackail boldly ignores modern science, modern philosophy, modern ethics, and the Christian religion. Mr. A. S. Lupton, late Vice-President of the Working Men's College, complained at the same meeting of the difficulty experienced in getting working men to take up seriously the study of classics. Why should they study them when they have all English literature at their disposal? We are glad to note that even the head masters of the public schools seem to be revolting against the demand that classics shall dominate education; for, at the recent meeting of the Head Masters' Conference, a resolution that it was the duty of head masters to support in their own schools the recommendations of the Classical Committee was carried by a majority of only five in a house of fifty-three.

THE Head Masters' Association at its general meeting took up a quite definite position in the matter of classics. The Heads refuse to admit that Latin has any

**The Head Masters'
Association.**

claim to a privileged position. They declared that it should not necessarily be a normal subject in the curriculum of all secondary schools, nor an obligatory subject in arts courses. They protested against the principle of "transfer" being forced upon schools in the interests of classics. That principle excites as much hostility now as it did when it was first mooted by the Board of Education in connexion with their scheme for advanced courses. The opposition is based on the view that, if children who show particular aptitude for a certain subject are to be transferred, midway in their school life, from the school where they have begun to another where they may finish, the unity of their education will be broken up and the corporate life of schools seriously injured. The classicists urge that every boy or girl with any literary aptitude should have a chance of learning Latin and Greek. If that be admitted, surely every girl with an aptitude for science must be given the opportunity of learning chemistry and physics, and every boy with the like aptitude the chance of studying biology. No doubt there may be cases of young people with a real genius for some particular study in whose cases transfer may be advisable, but the organization of a general system of transfer would bring more loss than gain. We must reconcile ourselves to the inevitable fact that, however excellent our system of education may be, most people will go through life ignorant of most subjects.

THE Modern Language Association, like the Head Masters' Association, have declared against Latin being compulsory for an Arts degree, supporting their

Latin in Arts.

view by the recommendations of the Government Committee on Modern Languages. The question is not an easy one, and hardly admits of being answered by a formula. On the one hand, no one can deny that some knowledge of Latin at least is necessary for the highest work and most advanced teaching in English or any other Western European literature and language, and in history. On the other hand, we cannot reconcile ourselves to the absolute refusal of any degree in Arts to candidates who are ignorant of Latin. How would it be if Latin were required only from those who aim at a first class? The system of special subjects for such candidates is now generally accepted. It is too often forgotten, we think, in our controversies that what is needed for the development of the best minds or is a necessary part of their equipment may be an actual hindrance to those that are less able.

Functions of Geography in Education.

RECENT correspondence between the British Association and the Board of Education has directed attention once more to the position which geography occupies in the national scheme of education. It was probably the first subject to appeal to the expanding intellect of man; it seems to be the last of the subjects essential to a sound education to be recognized as worthy of full status in schools and universities. To suggest, as the official regulations do, that a course of mathematical and physical geography completed by the age of fourteen is sufficient, if supplemented by what may be gathered subsequently during historical studies, indicates a lack of appreciation, both of the content and educational function of the subject. Perhaps the greatest function of geography in education is its power to draw into one rounded and balanced whole what would otherwise be specialized and detached studies. It is capable of giving unity to the natural sciences by bringing them to the common denominator of Earth and Man regarded as a single entity. Indeed, in these days of overcrowded time-tables, it might be wise to consider a much broader base for scientific studies in schools, where too often specialization is begun before pupils are well prepared for it. The Earth as a living unit is the principal subject-matter of all our studies, but we have lost sight of that unity in the detachment of specialization. Perhaps we might profitably readjust our vision of school education, and allow specialization to grow out of, and not precede—or, rather, ignore—the fundamental unity of a living Earth which is the subject-matter of geography.

Secondary Education through Practical Activities.

AT a meeting of the Educational Handwork Association, held during Conference week, Mr. B. S. Gott, Secretary to the Middlesex Education Committee, propounded an interesting scheme for a type of secondary education based upon practical activities rather than upon linguistic and similar studies. The reigning conception of secondary education is that it should prepare for the matriculation examination of a university, and, perhaps, add some advanced work arising out of such preparation. But every schoolmaster knows that a large proportion of the boys in any secondary school are not, so to speak, academically minded, and the schoolmaster is sometimes so far in the grip of the system as to regard these boys

as "duffers." The intelligent parent, however, who sees the boy in the home, bored by his lessons, but eternally tinkering, making, shaping, and perhaps meddling, knows far otherwise. He keeps the boy at school because he thinks it is his social duty to do so, although the boy may regard school chiefly as a place where games are played, and quite subordinately as a place where work is done. For such a boy Mr. Gott desiderates a secondary education in which science and mathematics are taught through their practical applications, geography through models, surveying, and the like, history as the history of local industries, literature partly through dramatic representation, and English mainly as a means of making a clear and systematic statement of work done—no other language being attempted. A boy of the type in question, possessed of no linguistic gifts and no special bent for craftsmanship, would become an employee in such non-technical occupations as are to be found in offices and distributing trades. The aim would be cultural rather than industrial, and the education given might in some cases even lead on to the university. Without committing ourselves to details, we feel sure that Mr. Gott is substantially right, and we hope that an experiment on the lines laid down by him may speedily be tried.

Dual Control.

THE question of the dual control of elementary schools, which was discussed in these columns two months ago, received extended notice at the recent North of England Education Conference. Mr. F. J. Leslie, Hon. Secretary of the Association of Education Committees, outlined a scheme by which, under a number of defined conditions, the owners or trustees of school buildings might lease the buildings to the local authority for a term of years, and at a nominal rent, the lease to be renewable at the end of the term. As to this business basis of a scheme, we entirely agree with Mr. Holland, secretary of the National Society, who, in his eminently wise and temperate speech, declared that what is wanted is an immediate and whole-hearted settlement by consent, such as is embodied in Mr. Davies's Bill, not a scheme which may merely postpone all the difficulties until the proposed leases begin to expire. There are conditions in Mr. Leslie's scheme of which we disapprove with even greater emphasis. One may earnestly desire religious teaching in the schools, and one may even go all the way with Mr. Holland in regarding such teaching not only as desirable, but as fundamental. It is quite another thing to settle by legal enactment, as Mr. Leslie would apparently do, how many lessons a week should be given, and how many minutes each lesson should last. In so far as Mr. Leslie's scheme involves tying the hands of managers and teachers in matters of this kind, it surely stands condemned. Of course, we see some advantages in a scheme which would definitely reopen—say, thirty or forty years hence—the question of the continued use of the buildings, but we think these advantages may be too dearly purchased.

Juvenile Employment.

LORD CHELMSFORD'S Committee, whose recommendations we described in our November issue, were in favour of local education authorities undertaking the work of assisting juvenile employment, and there appears to be a very general agreement in support of this, but the Education Committee of the County Councils Association are of opinion that they should

not be called upon to undertake any duties in connexion with unemployment insurance. The Association of Education Committees, on the other hand, takes the opposite view. In administrative county areas there is not, perhaps, the same need for this work as in urban districts, but we think that it will be a calamity if education authorities generally neglected the opportunity now placed before them of securing control of a development which is, and must increasingly become, intimately associated with their educational activities.

Honours Boards. THE consultative committees of head masters and head mistresses under the London County Council have been considering, at the instance of the Education Committee, the question of honours boards in elementary, including central, schools. It is obviously high time that such consideration took place, for under the present rule awards of an annual value of £5 can be entered on the honours board, and, to quote the exuberant language of the official memorandum, "the retention of such a low amount will accelerate the advent of the time when dimensional restrictions alone will make the present regulations unworkable." Besides, as the memorandum more soberly points out, scholarships are not necessarily honours, but only a means to an end which may not be realized. More important still, the boy or girl whose force of character or athletic prowess has won him or her high distinction during school life, but whose gifts do not win distinction in the examination room, finds no place in the list of honoured names. Again, proposals have been made to get over the difficulty of "dimensional restrictions" by deleting lists a decade old, in order to make room for fresh ones, so that the names of persons who may even achieve fame a few years hence would be automatically wiped off the board. The question is no doubt beset with difficulties, one of them being that what is a real honour in many an elementary school is no honour at all in a central school. A good start has been made, however, by having the difficulties clearly stated.

Head Masters as Trade Unionists. THE Head Masters' Association have taken the great plunge: they have declared for trade unionism. The Council have decided that, after March 31 next, no head master who accepts a head mastership at a lower salary than the minimum (£600) of the Burnham Report shall be admitted to membership of the Association. The Assistant Masters' Association are backing up the senior Association, and claim to have already prevented a number of their members from applying for underpaid posts. The elementary-school masters have definitely accepted the strike as one of their weapons; so teachers are being compelled, in self-defence, to adopt methods from which twenty years ago they would have shrunk with horror. But they are perfectly right. It is a primary duty of every profession to maintain a proper standard in the price of labour—not merely in its own interests, but in the interests of the public; because unless a profession is properly paid it will cease to attract men of ability, or to command public respect.

LONDON now possesses thirty-four Continuation Schools. The pupils receive 8 hours' instruction, of which 2 to 2½ are given to English, including history and geography, 2 to practical work (i.e. woodwork, metalwork, &c., for boys, needlework and housecraft for girls), 1 to calculations, 1 to drawing, and ½ hour, in the case of girls, to singing.

A NEGLECTED PROFESSION.

By A HEAD MASTER.

A SCHOOLMASTER is often at a loss for what to do with the boy who, without being a gifted scholar or a literary genius, has a taste for the humanities and an interest in, and sympathy for, human nature. It is difficult to advise journalism. It is too precarious a calling unless he has independent means. The Civil Service is too safe and unadventurous for a youth of spirit. Science and engineering are not in his line, and it would be something of a tragedy if he drifted on to the Stock Exchange.

In former days there is no doubt that this sort of boy would have found his way into the Church as a profession. It offered a life of high spiritual aim with the fullest opportunity for promoting the welfare of fellow human beings, and gave opportunity for study, if he felt drawn to it. The "cleric" could still be the "learned clerk." "Clerus Anglicanus stupor mundi" ("the Anglican clergy are the wonder of the world"), it was once said. Now, the clerical profession is simply outside his range of vision. It does not enter within the bounds of consideration. The number of recruits to the various branches of the ministry is a mere fraction of what it was before the war. Such as come in are mainly drawn from a different social class (not that they are necessarily the worse for that). Being without a university degree, they are not, in many instances, as a rule, distinguished for their learning, and, even if they make up somewhat for this by the warmth of their enthusiasm, still, the poverty of the average sermon is a by-word among church-goers. Preaching may not be everything, but it has always counted for a good deal. And in this respect the hungry sheep, who once a week look up to the pulpit, are assuredly not adequately fed. "The foolishness of preaching" is a term which applies only too literally.

What is the reason of this falling off? Nobody seriously believes that the present generation is lacking in generous aspiration. The usual excuse presented at Church Congresses and the like is that it is not possible, under present circumstances, to offer a living wage, or, at least, only a bare living wage, with only the remotest prospect of marriage. This, no doubt, is not without truth. The stories, which were current in the latter years of the war, of the parson who said that he was "dining out to-day," by which he meant gathering turnips and blackberries in the fields, who could not be seen outside his rectory in winter-time because his overcoat was full of holes, are calculated to have a deterrent effect on all but the saint and the ascetic. It needs an apostle to be able to speak of being "in hunger and thirst, in watchings often," as a possible inducement to his converts to face the same.

But, when all allowance is made for the weakness of the flesh, it is certain that this does not account for all. For one thing, the Church authorities are now making determined efforts and issuing confident anticipations of being able to offer at least a minimum subsistence wage to all. But, apart from all this, it is false to suppose that the young man with high ideals is, at the age of twenty-three or twenty-four, thinking much of ultimate prospects or even of the need of providing for a wife. If matrimony is his main and immediate object, he had certainly better look to some other calling. The sort of youth who is wanted for the ministry is the one who is thinking mainly of his true calling, of realizing the best that is in him, of finding the one absorbing pursuit that is after his own heart. If he feels called to the sacred ministry, it will need a prospect of very rigorous poverty to deter him.

The truth is that the clerical mind is felt to be too specialized a thing, and the paths of clerical thought to lie too far off the highway of human thought to-day. The deterrent may act on our young man in various ways. He may actually have studied theology and found himself unable to accept its conclusions. Or he may have found something like a philosophy of life, which he believes to be incon-

sistent with orthodox Christianity. Or he may vaguely have become accustomed to the idea that Biblical truth, as formerly understood, is now a discredited thing; that clerics and ministers are persons who commit themselves to strange riddles and antiquated formulae, such as are to be found in the Athanasian Creed and the Thirty-nine Articles, or, it may be, the Westminster Confession or the Shorter Catechism. Anyhow, he is clear that they are people of a different way of thinking from that of himself; and so the sort of office which is theirs, with its close connexion with humanity and human interest, never presents itself as a thing which lies within his capacities. If his enthusiasm be great enough, he betakes himself to secular settlements or workers' educational societies, or tries to find in idealistic politics the satisfaction of that hunger and thirst for righteousness which is one sign of the true aspirant to the Kingdom of Heaven and should be the chief qualification of that organized society which professes to promote the things of the Kingdom.

But no one who cares for the spiritual welfare of man or believes that an eternal and immaterial order underlies the changes and chances, the illusions and futilities, the grossness and monotony of mortal life, can permanently acquiesce in this state of things. We are all certain that, however thought may develop and change, the great movements that have been the life of humanity have not spent their force; that Christian truth, far from being exhausted, has in some respects only just begun to be realized. It is true that from the first the Christian message warned all men that the gate was narrow and that a minority only would find its way through. But it is one thing for the gate to be narrow in the sense that it is too difficult for any but a wholly chastened nature to find admittance, another in the sense that it can only admit of a narrowed range of thought and sympathy.

"A highway shall be there"—not a by-path or an obscure woodland-track. But once the narrow gate of self-devotion and self-denial has been entered, it must be a broad way, broad enough to contain the full caravan of human progress in its pilgrimage towards goodness and truth. This is the only prospect that can enlist the sympathy and enthusiasm of the "generous youth" and prevent him from drifting into occupations for which he has no call, because the true pastoral vocation is denied to him.

The basis of religious success must always be the union of heart and head. If the former seems the most important, it is certain that intellect must always be there in its controlling and critical function. At present the churches suffer from one-sidedness in this respect, as is proved by the latest practice of the pulpit. Many preachers unmistakably show what they have learned as chaplains in the trenches. The method of address is direct, frank, and popular. The "Oxford manner" is going. They have learned that the only way to reach the plain man is to study his sympathies, his methods of thought, even his language and diction. The extremest form of this is the "Woodbine Willie" method. That is, to talk Tommy's slang with a Tommy accent, and make your congregation titter for ten minutes at the jokes which a Tommy loves, then strike home in another ten minutes of seriousness.

But there is not enough depth in the "Woodbine Willie" method. There is too much of the desperate "catch-on-somehow" manner in it—the only way, no doubt, behind the trenches, but normal times need something more. It is not necessary now to ask people to sit for long hours listening to a discussion on supralapsarianism and sublapsarianism; they do not ask it even in Scotland. But one sometimes envies the spirit that called for such discussion. There are plenty of hard problems that call for a treatment equally thorough, equally logical, equally determined. There are plenty of people who are in a mood to hear them discussed when they feel that there is a man who is capable of the task. We can find the men if the real opportunity offers—men who will shrink neither from the horrors of the slum nor the darkness of metaphysical tangle, because of

the Light that shines through both—through to the inmost soul of them. Only they must not be deterred by the shibboleths of a flabby ecclesiasticism nor by hollow formulae which served their turn in the dilemmas that led to the Elizabethan compromise and can serve no other turn whatever. When these are no more, we may, without apology, be able to say to the sort of boy whom we are contemplating, "Have you ever thought of the Ministry—the Church?"

JOHN PERCIVAL, SCHOOLMASTER.*

By ONE WHO KNEW HIM.

OUT of the fifteen chapters of this book only the second, third, and fourth are concerned with Percival's work as a teacher at Clifton, Oxford, or Rugby. Chapters VII and XI describe his work and views on National Education. These latter chapters are of great historical interest; and they also contain clear statements of educational principles and methods, not yet fully adopted, and are of special value to us to-day.

It may be said at once that it was not as a great scholar or teacher in any special subject that Percival was eminent. He did not teach classics like Kennedy of Shrewsbury, or literature like Bradley of Marlborough. The teacher will get few wrinkles as to method from this biography. Nor will he learn much from it as to the organization and working of a great public school. The interest and stimulus of this "Life of Bishop Percival" lie not so much in detailing what he did, or how he did it, as in what he was. And to say this is to give very high praise to the biographer. Stanley's "Life of Arnold" lives still because Stanley was built in the same mould as Arnold, and felt what Arnold was. William Temple has completely suppressed himself; but the picture he has painted of Percival shows his own quality.

It is, of course, impossible in a brief review to bring out the powerful and penetrating influence of this great and single-minded man, John Percival. He was essentially prophetic and architectonic—prophetic, seeing the present not, as most of us do, against the background of its own crude past, but against a vision of a realizable future; a prophet and a pioneer; and also architectonic, and, when he had a free hand, a builder.

We have called him a prophet. He was so not only as a preacher, but always. He was one of those men whose words somehow rang true in the ears of the not naturally religious boy, and enlisted him on the side of right, of public spirit, of purity, of large-heartedness and courage, of virtues which appeal to a boy. It was the personality behind the words which told.

Perhaps the impression of his personality is best given by Sir Henry Newbolt, in his schoolboy novel "The Twynams." He is there manifestly describing Percival in the pulpit (page 21).

His eloquence was eloquence only to those who heard it. His thought was clear rather than rich, forcible rather than subtle: it was expressed in language which had no special beauty of its own. . . . Percy could never afterwards read a line of these brief and unadorned utterances without seeing instantly and with the clearness of life the tall spare figure, the chiselled face, with its lofty and remote air, saved from too dominant an austerity by the grace of the slightly stooping head; or without hearing again in every sentence the lingering north-country accent that gave so curious a distinction to the voice, and the unconscious melancholy cadence that softened its strenuousness with a grave beauty of resignation.

Canon Wilson, his successor at Clifton, in the sermon preached in the College Chapel on the Sunday after Perci-

* "Life of Bishop Percival," by William Temple. 18s. net. Macmillan. 1921.

val's death, used some words about him which might well form the ideal of every teacher as he looks at his class.

To awaken every one of the young souls before him to their possibilities as children of God, born with the very life of God in them, born to be God's fellow-workers in the creation of a society of high ideals, was not only from the first his aim, but it was his conviction that it was attainable. And his conviction was so strong and contagious that he attained it in a degree to which, in schools, I know no parallel. He made immense demands on human nature, on both masters and boys; nothing seemed too much to ask or to give.

Percival was also a pioneer. Life is so full and memories so short that probably few of our readers know that "that dangerous novelty"—the higher education of women—was due largely to Dr. Percival. He was the first president of Somerville College, Oxford. He had also, in 1872, pressed upon the colleges at Oxford and Cambridge the need of a close connexion between the universities and great towns—an idea which at that time was a startling novelty; and in 1876, through his strenuous exertions, Bristol became the first town in England to possess a university college, at first closely linked to Oxford, open to men and women alike. The example of Bristol was soon followed; university colleges were multiplied, and the university colleges have developed into independent universities at Bristol and elsewhere, as we all know. Adult education has made great advances. But Percival was the pioneer who had both the clear vision and the practical capacity for getting it partly realized.

In another great educational movement Percival was an early and active worker. The University Extension movement was set on foot by James Stuart at Cambridge; but Percival was the leader of a small band who promptly developed it at Oxford. This generation can scarcely realize how much closer the link between the universities and the great towns has become in the last forty years; and what new vistas of adult education, widespread through the ranks of labour, have been thus opened.

In his old age (for, after resigning his bishopric, he died at the ripe age of eighty-four) he could look back and see that much of what he had striven for was in some degree being realized; but the persistence of small and sectional ideals in education, the absorbing pursuit and misuse of wealth, the lack of true leadership and true loyalty in the democracy he loved, the horrors of the war, and grievous family bereavements, saddened his later years. Perhaps his most abiding sorrow was in the spectacle of the harm which a section of the Church he loved so much seemed to him to be doing to religious life in England by its lack of intelligent sympathy with their fellow-Christians.

The book will repay a second and third reading. Every teacher will rise from its perusal with an enhanced sense of the value and dignity of his work, and of the possibilities before us as a nation when we are far-sighted enough to avail ourselves of them.

SCHOOLS OF YESTERDAY AND TO-DAY.

By ALICE M. SHERWEN.

THE old school was a workshop into which men were beaten into shape, the new is a garden for the free growth of a human being. The old produced a type, the new cherishes the individual. The old kept its eyes ever turned to the past, the new hears the distant tramp of a greater race. We are living in a period of transition. It is possible to see the very hands of the clock moving on-wards, to watch with our own eyes the passing of the old order, the dawning light of the new.

It may be seen in our schools in England to-day—the great public schools, whom love of old tradition ever urges to grasp with straining hands the skirts of progress, if they

may but stay her flying feet; schools who look back into the past, and, hugging the shore, shrink from sailing out on to the untracked seas of God; and again, in strong contrast, schools who are moving on-wards, groping after the meaning of true freedom, searching patiently for the soil and the water which will foster the highest development of each individual human plant, hesitating, with pruning knife in hand, watching, and waiting.

In my work I moved from the one type to the other, studying, comparing. After several years spent in preparatory schools which are run by public-school men and feed the public schools, I moved to B., a co-educational boarding school for children up to university age, and one of the most modern and enlightened places of education in England. Later an excellent opportunity offered of working for a time at A., a fine public school for boys, which in many ways occupies an intermediate place between the old public schools and B. I was at once struck with the wide scope which A. offered for individual development, and by the absence of that narrow dictatorial spirit which is for ever saying to boys, "This is the way, walk ye in it"—the spirit by which many a school, in the name of "duty" or "public spirit" or "what is done *here*," manages to cramp successfully into its own little cast-iron mould the infinite potentialities of an unfolding human soul. A boy might even go on the river and read a book while a match was in progress without being considered outside the pale of civilized society. The many hours of free time, the study system, the number of periods in the week which the older boys might devote to private work, the choice of subjects allowed them, the friendly relations existing between staff and boys, the freedom of speech with which the boys honoured the head master himself, the absence of the tyranny of athleticism in the school—all signs of the liberal spirit which is the outstanding feature of modern education.

Plenty of fresh air, beautiful surroundings, wide opportunities for a full and varied life, for the development of mind and body, and much freedom both in thought and activity—these were common to both schools of which I am speaking. But it was not long before I began to see that there was a fundamental difference between them. At B. the spirit of freedom is carried further; it is not only the guiding principle of those in authority, but it is more widely accepted, and its significance more clearly understood among the boys and girls themselves. Life at A. is passing down a broad and well-trodden road; at B. it is wandering over a wide plain—to find oneself.

What ultimately underlies the life at B. is the realization that it is the human ego and its development which matters, and that class distinctions, such as those of sex or sect, are not vital, and indeed may become iron chains, hindering free and full development, the rising of the spirit towards that perfection which is its ultimate reality, if too much stress is laid upon them. This great underlying principle shows itself in various aspects of the school life:—

(1) Boys and girls are brought up together naturally and freely, as a community of human beings, sharing a life full of interests and varied opportunities. Stress is laid on their common humanity, not on sex difference, as at monastic schools or at co-educational schools where there is no true freedom, the mixing of the girls and boys being at one time artificially produced, and at another artificially restricted.

(2) The children come into free and more or less close contact with a large number of widely differing personalities, with men and women with many varied opinions and points of view. They are encouraged to think for themselves, to rely on their own inborn sense of truth, not to accept without question the opinions of an older person simply because he is older.

I would say in passing, however, that I saw enough to convince me that the over-stimulation of the critical faculty at an early age is fraught with great danger. To encourage a child to think that with his small experience he is competent to pass summary sentences on whatever ideas are presented to him—the fruit, it may be, of the labours and

striving of a lifetime—is simply to put obstacles in the path of his development. To be more concerned to criticize than to learn is likely to lead to a materialistic attitude towards life, to a curious narrowness of outlook. Criticism belongs rightly to a later stage; it may give a clearer, sharper outline to truth already perceived, but it is by *aspiration* that we grow. It is in moments when the mind is stilled and, unaware, is carried far beyond its own narrow limits on the wings of wonder and reverence, that a wider horizon breaks through the mist. These are the true milestones of life.

(3) The school is non-sectarian. The dust of ready-made dogma, ceremonial, the dangerous possibility of taking shadow for substance, which is frequently the penalty for sheltering oneself behind a great name before ever one has aspired after and in some measure attained to the reality for which it stands, the self-complacency of "Abraham's children"—these would seem often to choke true spiritual development, to prevent rather than help people to realize that attitude towards life which we call religion.

(4) There is a strong republican spirit in B. Any member of the staff—left perfectly free by the head master to adopt his own methods, make his own experiments, and to choose (within broad limits) his own line of work—will receive little respect from the children simply because he is a member of the staff. He must make his place with them by sheer force of character and honesty and kindness of purpose, but if he attempts to force matters by high-handed, autocratic methods, he will quite certainly fail. If, however, the children see that he means to play fair by them, they will play fair by him; he is not regarded as a natural enemy to be outwitted if possible, but simply as a member of the community who stands or falls on his own merits.

And what is the result? The average boy or girl who goes out into the world after having been educated at B. has a wide outlook and is tolerant and self-reliant. He has a certain tendency to look deeper than appearance and to search for reality, he is not one to be brow-beaten by authority or convention. Finally, his attitude to women and to many questions of vital importance is fundamentally different from that of the average public-school boy.

My subsequent experience of the school A., delightful in many ways, was the means of giving me clearer conception of the principles for which B. stands, and which make life there a wonderfully enlightening experience for any boy or girl, and indeed for any man or woman.

I found that the boys of A., although freer from the tyranny of tradition than are most public-school boys, were still exceedingly conservative, strongly opposed to anything new; new ways, new thoughts, new individualities roused in them a sort of righteous indignation. Unthinking resentment at some small breach of loyalty to custom (trivialities which a boy, with his work, hobbies, games, and wide future before him, should consider it beneath him to notice and discuss) would frequently blind them to the claim of the big things of life—courtesy, kindness, and fair-dealing.

I found also that, like many other people, they had a strong tendency to imprison individuals within the cage of a class of some kind. One day two boys of fifteen solemnly interviewed me.

"Are you a schoolmistress?" they began.

"No," I replied.

"What are you then?"

"I am myself."

"No," they objected; "while you are teaching in a school you are a schoolmistress. And you don't look like a schoolmistress, and you don't dress like a schoolmistress, and you don't talk like a schoolmistress; and it's *all wrong*."

And with this they took their departure more in sorrow than in anger. Like the majority, they did not seem to have grasped the fact that if a man's life is to be worth its utmost to himself and the community in which he lives, he must be true to the light that is within him as a separate individual.

These two characteristics were largely absent from the community at B.—a sign of a wider outlook upon life and

deeper realization of the meaning and significance of true freedom. I believe this to be the fundamental difference between the two schools. There was in both of them, and indeed there is almost everywhere, a growing tendency for children to show great disinclination to work hard at any subject which does not make an immediate appeal or promise some obvious material advantage for the future. With regard to this, as in so many things, the tone of a school is all important, and one wonders whether a more honest attitude towards work could not become customary. Could not boys who receive so much consideration and have so much pleasure in freedom in their lives learn to take a share of hard work as much for granted as other members of the community?

Times have changed. Schools are no longer the prisons of bygone days where boys had to break through regulations when they could almost in self-defence, schoolmasters are no longer tyrants to be outwitted when possible, but friends. Lessons—in competent hands—are no longer dull and profitless "tasks." But tradition dies hard among boys, and in the majority there appears to linger, even now, some relic of feelings, a groundless survival of the dark ages of education, which still affects their attitude to work and to class—"discipline."

Owing to the democratic spirit so characteristic of B., I found it comparatively easy to run all my classes there without resorting to punishment, rousing instead a spirit of co-operation, in which each worked and controlled himself for the good of the whole form.

At A. it was much more difficult to do this owing to the fact that the boys had, as it were, been brought up on the punishment system, and took penalties as much for granted as any other regularly recurring incident in their lives. Their attitude to punishment was in itself extremely significant. They preferred to have punishments in moderation for two reasons—(1) Because a teacher who did not give them was not true to type, but was no doubt a faddist with a system, one who had taken a vow, which he must at all costs be made to break; (2) Because punishments are due payment for transgressions, and relieve one of all personal responsibility for one's behaviour in class, and a teacher armed with them is fair game for attack.

I believe the tone in schools generally would be far higher than it is at present if systematized punishments, with their constant appeal to a rather low form of self-interest, and the consequent blunting of the moral sense, were almost entirely abolished.

Seeing that until very recently the education of the boys at A. had been entirely in the hands of men, it was interesting to notice their attitude to a well qualified woman who had come to teach them for a time. One found that one was considerably hampered in one's work by having to contend against strong prejudice—a prejudice not anticipated, and the nature of which one gradually realized as the weeks went by.

Its key-note was lack of faith in a woman and all her works, whatever her experience and intellectual achievements. The majority of the boys were evidently firmly rooted in the conviction that a woman was necessarily inferior to a man. The Sixth Form, however, with only a few exceptions, showed themselves broadminded enough to be ready to give an individual woman a fair chance and to judge her on her own merits. On the other hand, their outlook was on a world of men and boys, and they regarded women as an accessory—an accessory with a "sphere."

That boys should take up this attitude is not surprising when one considers that the large majority of men and women, even the most enlightened, consciously or unconsciously, hold the same view, though they might not care to admit it. There is some truth in what they think. Ages of cramped environment, oppression, and adverse mental suggestion from babyhood have done their work to the detriment not of women only, but, in consequence, of the whole race. (The insight I have been able to obtain into the early-Victorian or rather medieval conditions of life for

women in Portugal, and into the harem system of Egypt, has been peculiarly enlightening in this connexion.)

If one holds the generally accepted view that men and women are spiritual beings travelling the same upward path towards perfection, it follows that each individual should have full freedom for development, and that all should be judged on their merits, spiritually, intellectually, and physically, irrespective of sex.

It would certainly be a step in advance if some work in boys' schools were taken, as a matter of course, by well-qualified women. Even if a boy is taught by women in his earlier years, on the proud day that he goes to a public school and finds that the sex have totally disappeared, the sole survivor being the matron (whom convention for some unexplained reason permits), armed with darning needle and medicine bottle, he will at once, unconsciously perhaps, but none the less surely, class women among the childish things that, now that he has become a man, he has put away.

In cases too when boys come from homes which are not all they might be, it seems a pity that they should not have the opportunity to meet women with different ideals as well as men.

I believe that the high principle which a boy begins to build into his life at a really good school would obtain a deeper hold on his consciousness if he were being brought into contact with both sexes instead of one. He learns the meaning of honour, for instance, but so often, as his later life shows, honour with him is but honour in his dealings with men. An ideal such as that is apt to degenerate into a mere convention, if it does not permeate the consciousness sufficiently to influence his attitude towards all human beings.

Just as in later years to mix with none but members of one's own sex unbalances and impoverishes the life of any normally constituted individual, it would seem as if a co-educational school should give a richer experience and be a better preparation for the future than those in which boys and girls are brought up separately.

While the monastic system of education appears to lead to a somewhat onesided outlook on life and to breed a sense of division between the sexes when the ideal is unity, I believe it to be responsible for a great deal of unhappiness and bitter disappointment. Boys and girls are quick to react to the mental suggestions of their elders, and when these quite evidently put intercourse with their fellow beings, who happen to belong to the opposite sex, in the same category as smoking, the result can scarcely be good. Finally, at a critical age, when natural attraction is strong, they are turned out into the world to seek each other, a vain dream their guide, in place of that sound basis of experience which makes shadows known for what they are.

Institutions such as the monastic type of school, which by sex segregation lay emphasis on the fact of sex difference above everything else, belong to the past, and will become gradually rarer as the race advances in spiritual development, and men and women stand side by side, fellow workers united by the bond of a mighty purpose, fellow travellers with eyes lit by the vision of unscaled heights ahead.

REMINISCENCES OF AN EX-HEAD MASTER.

By "RUDE DONATUS."

III.

OF GOVERNING BODIES.

WHAT a delusive picture the words suggest! They are not "bodies" and they do not "govern." And yet, stay a moment and consider this, for it is only under certain conditions that this is true. What may be said with assurance is that *if* they govern, there is chaos among the governed. Are they then of no use? Of many uses. First, there is

the British public, and they love a lord. Secondly, they are something to fall back upon in correspondence. Thirdly, they generally possess one or two useful members. Fourthly, they are a picturesque field for the exercise of a head master's capacity for tact. It is an exhilarating moment when a head master is present at one of the meetings of The August. Experience has taught him some things: and amongst them this—that it is futile to attempt anything important without having settled it, or the major portion, out of court. For with whom has he to deal? A curious medley—an *olla podrida* lot—each one very important and the more so in proportion to his inefficiency and ignorance of school politics. Undoubtedly the assemblage must be sure, at the end, that they have fulfilled the whole duty of governors, and the head master's policy is to guide and lead while he poses as the led. The voice is Jacob's voice, but the hands are those of Esau. You may apply the words whichever way you will. At a head master's outset he may well consult them upon little things. His Governors will think them great. By such means he builds a structure of confidence. It may be accepted as axiomatic that the majority are figureheads, public-catching, Mrs. Grundy-satisfying. Such must never be bounced, but listened to whenever they seem likely to "take a line"—which is almost never—and the points made or muddled carefully noted, quoted, and discreetly disregarded. The majority will be quite satisfied and go away certain that their advice, and theirs only, has been accepted. By the next meeting they will have forgotten what they said. For how should they act or think otherwise? Are they not bishops, deans, lords-lieutenant, noble lords, members of Parliament, or the like? What can they know? They have, or think they have, no time: at all events they have no knowledge, no training such as is required, and little or no inclination to dig into the "why" and the "wherefore." They have the minutes sent them: these they read *en route*, and misunderstand. "What have you important for us to-day?" and, *sotto voce*, "Can I catch the early train?" "Just give me a hint what you want." And so the school world wags. But it is not all easy: it can't be achieved in a day: the idiosyncrasies are most desirable to remember. Have you an "old boy" among the numbers? Recollect at what period he was at school and let him quote what "we did." Have you a hard-headed business man who wants everything clear cut and short? It is the head master's business to cut things clear. Have you a bishop, who is utterly well disposed to you, but a little doubtful about the trend of things, which may seem to be going away from strictly Church lines? It is the tact of the head master alone which can satisfy doubt. Have you a financier on your governing body? Ah! such a one may be a very great help and a very great hindrance. *Aut grande bonum est aut grande malum.* School finance is a world of itself. Introduce, let us say, the politics of company promoting into school finance and you are asking for trouble indeed. To begin with, every school should be in debt or not afraid of going into debt.

It is not often understood, until a real trial has been made, what banks will do under pressure—especially if there be a choice of banks—or, failing them, what an insurance office will venture. *Experto crede.* And, after all, the risk connected with a respectable school is almost nil. Buildings, playing fields, funded property (even though there be not much of it), a balance sheet showing a substantial profit for the last three years, a considerable entry list of prospective boys. Have you at any time money on deposit in the bank? Approach the bank, and suggest that they lend you a substantial sum. If a difficulty seems likely, withdraw all deposits, reduce any floating balance to a minimum, and declare that your future policy will be to keep the smallest of margins, and you will probably find that the bank sees reason. If not, go to the other bank, and be quite sure that a big school's finances (for house masters and others will follow the lead for convenience sake) are far too good an asset for anyone to let slip. When, then, a head master has proved himself a success educationally, he can begin to push his Governors quietly along the desirable road of extensive borrowing. The great

thing is to be bold enough: to have faith, to know what you want, and go for it. You say to yourself: "A. thinks himself a bit too clever; B. is a half-hearted man who can never undertake any responsibility unless well backed, and it is my business to back him." Also you may be sure that in any company of men the majority are ignorant. It is these who should be as wax in your hands. But you must lay the ground bait; you must be astute enough to cloud your own action lest it be too dictatorial; and you must never be afraid. Go for big things, and refuse to have your school hampered by the bogey of debt. And yet there will come times when you do not seem to be going to win out with your Governors. Never lose heart—crack a joke: always give the appearance of winning. Even if you do lose, lose smiling, and pretend that you have won. At the next attempt you will win.

And at what time in the meeting will it be to your advantage to have any big proposal brought forward? It is a nice point, and no one can dogmatize upon it. Probably it should not come in the middle of a meeting; it is better either at the beginning or towards the end. It depends upon your preparation beforehand. Either have it at such a time that there is a good deal to be done after it, and so prevent undue discussion, or—if you know your Governors, or most of them, well, and if you are trusted—you may risk it at the end. "Well, Mr. Headmaster, time is getting on. I have no doubt you have thought it all out, and there does not seem any very great difficulty. I think, gentlemen, we may proceed to voting." ("And," as some of them will say to themselves, "to luncheon.")

UNIVERSITIES AND SCHOOLS.

WALES.

The Welsh Department have, it seems, resolved to put an end for the present to free secondary education in Wales, for it is only upon this assumption that we can explain the communication which they have forwarded to the Education Committee of Merthyr Tydfil. This authority may justly be regarded as the pioneer of free secondary education in Wales by the establishment of the Cyfarthfa Castle School as a free school, and it was they who set the example which was subsequently followed by Glamorgan, Monmouth, and Swansea. It is therefore an interesting coincidence that Merthyr should be the first education authority in Wales to come into conflict with the Board on the question of free secondary education. The new school at Quaker's Yard will only be recognized on condition that fees of from £4 to £6 be charged, and that all new pupils at the other secondary school be charged similar fees. Further, they insist on raising the fee of £3 at the intermediate school in the same borough. The Board of Education, therefore, apparently have embarked upon a policy of restricting secondary education to those pupils who are able to contribute something towards its cost—under present conditions only a minority—and the only exceptions will be those boys and girls who are successful in entering under the "free place" system. If the same principle is applied to Glamorgan and Monmouth it will inevitably affect very seriously their whole system of secondary education, for it was clear that all further extensions of educational facilities in these counties were to be based on schools in which no fees were charged. The Merthyr authority have resolved to send a deputation to the Welsh Department to discuss the new situation, and its result will be watched with interest.

The Board of Education, in pursuance of their policy of economy, have insisted on the closing of some evening classes in Breconshire, and there has naturally been an outcry against this action, especially in the rural areas.

At a conference between the primary and secondary teachers in the same county, an attempt was made to co-ordinate more closely the work in the upper standards in the elementary schools with that in the lower forms of the secondary schools, and a somewhat detailed syllabus for the ordinary entrance examination to the secondary school was drawn up. It was intended that the upper standards in the elementary schools should mainly devote themselves to it. We have heard a great deal in recent educational discussions in Wales of the importance of proper co-ordination between the work of the elementary and secondary schools, but we

are of opinion that there is a tendency to exaggerate it, for the work in the lower forms of the latter is not, except in a very minor degree, a continuation and extension of that in the upper standards of the primary schools. The great majority of the pupils in the secondary schools are required to embark upon a whole range of subjects in which the primary schools give no previous training, and therefore it is far more important that the new pupils should have acquired a habit of learning than that they should attempt to reach a somewhat advanced stage of proficiency in one or two subjects like arithmetic or geography. On the other hand, inasmuch as the courses in the university are very largely an extension and continuation of the course followed in the secondary schools, it is essential that there should be a proper understanding between the university and the schools. Much of the criticisms of recent years of the work of the school on the part of the university is due to the failure to appreciate this fact. Fortunately, however, the establishment of the secondary schools committee and similar bodies has tended to produce a far better understanding of the problem of co-ordination in Wales.

SCOTLAND.

The mental fare provided for those members of the Educational Institute who journeyed to Dundee at the New Year time for the annual congress was somewhat heterogeneous. Mr. Blackwood, the president, who is a Dundee head master, opened with an excellent topical address on the Geddes Committee's threat to educational efficiency and on the Department's recent circular. Then, having passed a resolution of protest on the motion of ex-President Dickson, the congress proceeded to forget Sir Eric, in discussing the League of Nations, psychoanalysis, the relation of the secondary school to the university and of the Education Department to both, and self-government for teachers and for pupils. When the weather permitted, the visitors did their best to avail themselves of the varied entertainment which the local committee had provided for their delectation in the best tradition of pre-war congresses. Altogether the congress season was a success.

The most interesting feature of the congress was the twofold discussion on self-government. It is significant of Scotland's backwardness in respect of pupil self-government that Miss Tweedie, in dealing with that subject, spoke mainly of the views and experiments of the extremer exponents of the cult in England, and had little to say about the more humble attempts of ordinary teachers. The fact is that the Scottish temperament and the Scottish educational system incline to an over-rigidity that is not favourable to school experiments of any kind and that is specially unfavourable to attempts to give any great measure of freedom to the pupils. It is doubtful whether the interesting speech of Mr. A. S. Neill, whose presence gave zest to the discussion, made many converts to the new ideals. His confession that he and his fellows of the freedom movement do not know what goal they are making for was not likely to inspire confidence in an audience of canny Scots. There was more sense of reality in the treatment of professional self-government by Mr. Hugh Guthrie. Scottish teachers already enjoy a considerable degree of self-government and have very definite convictions regarding the need for more. The subject, moreover, has been frequently discussed in recent times, more especially by Dr. Boyd, last year's president. Mr. Guthrie, therefore, spoke to a meeting ready to hear and to appreciate. Very properly, he insisted that the claim to be a self-governing profession implied clear ideas on educational policy on the part of teachers. That, he maintained, could only be got by making the council and the annual meeting of the Institute more capable business bodies, and, with a view to this, he propounded an elaborate scheme for the institution of a small executive council of delegates in constant touch with delegate meetings of the local branches. His proposal, in effect, was that the Institute, to secure greater freedom, should organize itself on a trade union basis. He did not say so in so many words, but that that was in his mind was evident from the veiled advocacy of an alliance of the Institute with the Labour Party as the one party in sympathy with the self-government ideals. Mr. Guthrie's point of view is typical of an active group of teachers in the industrial districts, especially in the south-west of Scotland. It will be interesting to see what support it gets outside these districts when the matter comes up for consideration in the branches in the course of the year.

Circular 44 was hailed with general approval on its first appearance, but the chorus of criticism has been steadily increasing and growing stronger, until it has become rare to hear a good word said about it. The section relating to the abolition

Second
Thoughts on
Circular 44.

of the present qualifying examination, however, is generally accepted as on sound lines, everybody being agreed that the time has come when the selection of primary pupils for advanced instruction should be made jointly by the teachers who have taught them and the teachers who are to teach them. The part of the Circular which has been condemned by most teachers, as well as by executive officers of standing, like Dr. Third, of Ayrshire, is that which relates to the segregation of post-primary pupils into secondary and non-secondary groups. There is a suspicion that behind this proposal is an attempt at economy. As Mr. Blackwood said in his presidential address at Dundee, it is not clear whether the new scheme is a gift from the gods or from Sir Eric Geddes. It is certainly possible to read the Circular as meaning that secondary education is to be confined to those pupils who, at the age of twelve, undertake to go through a five or six years' course of study. In that case the very considerable number of pupils who take the Intermediate Certificate and go no further might be reduced to non-secondary status and be taught in larger classes by teachers with lower qualifications. Apart from this, there is genuine alarm at the prospect of the present supplementary courses getting a fresh lease of life under a new name. The Circular suggests non-secondary courses carried on for three school years and a year at the continuation classes; but, seeing that there is no likelihood of the extension of the school age or of the institution of proper continuation classes for many years to come, the only way in which effect could be given to this proposal would be the conversion of many of the existing intermediate courses into extended supplementary courses. In that case the stigma attaching to the supplementary classes would be attached to the non-secondary classes right away. Nothing did so much to depreciate the former as the practice of teachers who made them a dumping ground for the less capable pupils. The Circular, by suggesting a similar function for the new type of courses, has made the transfer of the evil reputation only too sure.

The Glasgow education authority, breaking new ground, has instituted a movement for the discouragement of bad language in the streets and elsewhere. A card of appropriate exhortations on the subject is to be put in the hands of all scholars in the qualifying class and in the classes above it, with a pledge for signature to the effect that: "I am resolved always to use clean language in speech and writing, and I will try to discourage the use of bad language among my companions at work or play." All good citizens will extend their best wishes to any measures making for cleaner and more restrained speech on the part of young people. But it is doubtful whether the Glasgow authority is likely to do much good by the plan it has adopted. It is a curious illustration of the "shall" and "will" confusion among Scots that the pledge as first presented to the authority was worded: "I shall try." The fact that a blunder so obvious had escaped the notice of the committee preparing the pledge as well as of the several head masters whom they consulted, naturally provoked scoffing comment on the part of the local press. The more serious question it raises is whether if the school methods of teaching grammar so completely fail that the very teachers err the not very different method of general exhortation is likely to have any better effect in regard to objectionable language.

IRELAND.

Magnus ab integro nascitur ordo. When the Dail Eireann, on January 7, and the Parliament of Southern Ireland, on January 14, approved the treaty agreed upon between Mr. Lloyd George and the representatives of the English Ministry on the one hand, and Mr. Griffith and the Irish representatives on the other, the Legislative Union between Great Britain and Ireland came to an end, and Ireland was divided into two sections, one consisting of the six north-eastern counties with a Home Rule Parliament set up by the Act of 1920 and still connected with Great Britain by legislative representatives at Westminster, and the other consisting of the remaining twenty-six counties under the designation of the Irish Free State and with practically the status of a self-governing dominion within the British Empire, but with no representation at Westminster. This Free State has now a Provisional Government with full control of education. Further, by the Act of 1920, on February 1 all the education boards in Ireland come automatically to an end, and the Northern Parliament takes full control of education in the six counties of Ulster. Arrangements have been made for the intermediate system to continue until the examinations next June have been held, but what will be the educational system in operation after next summer is quite uncertain. Irish education has long been in need of drastic reform, and will now, no doubt, get it; but *festina lente* is a good motto, and it would

be well if the present intermediate system should be continued even for another year rather than that changes should be made without due consideration. Every one is agreed, however, on one reform; and the finance of secondary education requires immediate assistance. This can be provided for by temporary relief pending the larger measures of educational improvement. There have been several inquiries into various sides of Irish education in recent years, and the Provisional Government would do well to appoint a representative committee to consider their reports and to co-ordinate their suggestions. The Dail Eireann, through its Minister of Education, appointed a commission about a year ago, but it was only representative of one side, and the present Provisional Government, which is likely to develop into a permanent Government, represents the country as a whole and should therefore appoint a committee representing the whole Irish Free State.

The Dail Eireann Commission has published draft programmes for secondary-school subjects and certain suggestions for secondary education, which are likely to meet with general approval, as they are based on sound educational principles, but they recognize that their work is only provisional and have nothing to say to the general organization or financial basis of education as a whole, and without this foundation no permanent progress is possible. The draft programmes published deal with (1) Irish, English, and other modern languages; (2) mathematics, science, manual training, and agriculture; (3) classics; (4) history and geography, economics and sociology; (5) art; and (6) music.

The attitude of Trinity College to the proposed political settlement has always aroused great interest. It was made quite clear by a resolution adopted by the Board of the College before Christmas, supporting the terms suggested for the settlement of the future government of Ireland. It stated that "the true interest of Trinity College can only be furthered by Irish peace; and in the building up of happier conditions in Ireland the Board of Trinity College believes that Trinity men should take an active and sympathetic part." Similarly, at the meeting of the Southern Parliament on January 14, Prof. Thrift, one of the four members for Trinity, speaking after Mr. Griffith, said that they took their stand on a common basis with the rest of the Irish Free State and would work together for its common good.

The scale of payments made in December by the Intermediate Board to the schools, on the results of the examinations held last year, was as follows:—
For a pass in the junior grade, £4. 7s.; in the middle grade, £6. 10s. 6d.; and in the senior grade, £9. 15s. 9d.; for a pass with honours in the junior grade, £6. 10s. 6d.; in the middle grade, £9. 15s. 9d.; and in the senior grade, £14. 13s. 7½d.; and for a rise from pass to honours in the junior grade, £2. 3s. 6d.; in the middle grade, £3. 5s. 3d.; and in the senior grade, £4. 17s. 10½d. Whatever else is changed in the near future, this method of payment by results of examinations should disappear. It is inherently faulty, and has not had even the merit of consistency in recent years, the unit never remaining the same from one year to another.

PRIMARY SCHOOL NOTES.

The Effects of a Salary "Cut."

A REDUCTION in the Burnham scales of salary would liberate teachers from their undertaking to observe the period of truce, and this freedom of professional action would, under certain conditions, prove very effective. There are areas where the national minimum scale of salaries still prevails, and a diminution of this scale would rapidly drive teachers away from the districts concerned. If teachers decided to set up a boycott in any area it would be a difficult matter to maintain an effective school service therein. Teachers possess a great influence upon the supply of recruits to the profession, and this factor would be strengthened by the support of parents who had been induced to send their children for training as teachers on the strength of the acceptance by the Board of Education of the Burnham scales. An agreement among teachers to refrain rigidly from performing voluntary duties would cause enormous inconvenience and financial loss. In this connexion may be mentioned only two institutions which have arisen during and since the war—the administration of War Savings Associations and Juvenile Unemployment bureaux. The greatest danger to the State would be the temptation of teachers to engage in political action as a means of redress. Such a movement would be the more effective since it could be carried out on strictly constitutional lines.

(Continued on page 84.)

Messrs. G. BELL & SONS' LIST

To meet the demand for up-to-date school atlases Messrs. Bell have arranged with the well-known cartographers, Messrs. Geographia, Ltd., to publish, in association with them, a new series of

POST-WAR SCHOOL ATLASES

incorporating all the territorial changes resulting from the Great War. The first four are now ready:—

FIRST ELEMENTARY SCHOOL ATLAS. 16 coloured plates, size $9\frac{1}{2}$ by $7\frac{1}{2}$ ins. 9d. net.

POPULAR SCHOOL ATLAS. 32 coloured plates, containing a comprehensive selection of political and contour maps, size $9\frac{1}{2}$ by $7\frac{1}{2}$ ins. 1s. 3d. net.

BOLD TYPE POLITICAL AND PHYSICAL SCHOOL ATLAS. 40 coloured plates, size $9\frac{1}{2}$ by $7\frac{1}{2}$ ins. with 12 pages of index. 1s. 6d. net.

MODERN SCHOOL ATLAS. 48 coloured plates, containing a comprehensive series of political and physical maps, size 11 by $8\frac{3}{4}$ ins., 8 pages of introduction, and an 8-page index. 2s. 9d. net.

These atlases, which are based on the most approved principles of cartography, and are thoroughly up-to-date, have been planned to cover the whole course of general geographical study from the beginner to the advanced student. They embody a number of special features, designed to give the student the greatest possible assistance in his work. Soft, pleasing tints have been used in colouring the maps, and the typography is eminently clear.

STANDARD HISTORICAL TEXT-BOOKS

A Historical Course for Middle Forms.

By B. L. K. HENDERSON, M.A., D.Lit., and P. MEADOWS, M.A. In 4 vols. 3s. each.

Vol. I.—WESTERN EUROPE. Fourth edition.

Vol. II.—THE ENGLISH NATION: INDUSTRIAL AND SOCIAL HISTORY. Fourth edition.

Vol. III.—THE ENGLISH NATION: CONSTITUTIONAL HISTORY.

Vol. IV.—THE ENGLISH NATION: POLITICAL AND GENERAL HISTORY.

English History Source-Books.

Joint Editors, S. E. WINBOLT, M.A., Christ's Hospital, Horsham; KENNETH BELL, M.A., Fellow of Balliol College, Oxford. 17 volumes, covering the period from 449–1887. Reduced price, 1s. 6d. net each. Also **A Source-Book of London History.** 1s. 6d. net. **Scottish History Source-Books** (1637–1688 and 1689–1746). 1s. 6d. net each. **Canada.** 1535–1913. 1s. 6d. net.

The editors have aimed at the greatest possible variety in the choice of extracts, and letters, biographies, ballads and poems, diaries, debates, and newspaper accounts have all been laid under contribution.

Concise Historical Atlas for Schools

(1789–1914). Compiled and drawn by B. V. DARBISHIRE, M.A. With 108 maps and diagrams. 2s.

"A marvel of compression . . . the author deals with almost every aspect of his subject."—*Athenæum*.

Ancient History for Schools from the Earliest

Times to the Death of the Emperor Augustus. By E. NIXON and H. R. STEEL. Second edition. Illustrated. 3s.

An Imperial History of England.

By G. GUEST, B.A. Revised edition (1921). 2s. 6d.

A Social History of England.

By the same author. Fifth edition, revised (1921). 2s. 6d.

A Constitutional History of England.

Revised edition (1920). 2s. 6d.

Each of these three volumes is self-contained, a different aspect of the national development being presented in each. They are well illustrated and strongly bound.

Modern European History.

By C. D. HAZEN, Professor of History, Columbia University. Demy 8vo. Illustrated. 7s. 6d. net.

"Contains a fine array of historical portraits and other adornments. It is undoubtedly a first-rate text-book."—*The Journal of Education*.

British Diplomacy, 1813–1815.

Select documents dealing with the Reconstruction of Europe. Edited by C. K. WEBSTER, M.A., Professor of Modern History, University of Liverpool. Demy 8vo. 12s. 6d. net.

"An invaluable collection of 230 extracts from original documents. . . . The story of 1813–15 as told in this illuminating source-book is full of parallels to present day problems."—*The Journal of Education*.

The Life of Napoleon I.

By J. HOLLAND ROSE, Litt.D. Seventh edition. In one volume, demy 8vo, 1126 pages. 15s. net. Also in 2 volumes, large post 8vo. With numerous illustrations. 30s. net.

"There is no single book on Napoleon," to quote the *Manchester Guardian*, "to be compared to this for accuracy, for information, for judgment, nor is there any that is better reading."

Europe in the Nineteenth Century.

An Outline History from 1802 to the opening of the Great War, 1914. By E. NIXON and H. R. STEEL. With maps. Fourth edition. 2s. 6d.

Landmarks in the History of Europe.

By E. M. RICHARDSON, B.A. Sixth edition. With illustrations and maps. 3s.

The Building of the British Empire.

By E. M. RICHARDSON, B.A. Fourth edition. With illustrations, maps, and plans. 2s. 6d.

Tells the story of the "Expansion of Britain" in a connected series of historical episodes. The fourth, revised, edition gives some account of the changes in the governance of India and Egypt, and of the mandatory States created by the Great War.

An Introduction to English Industrial

History. By HENRY ALLSOPP, B.A. With

maps and plans. Sixth edition. 2s. 6d.

"A well-proportioned economic history of England from 1066 to the present day."—*Manchester Guardian*.

York House, Portugal Street, London, W.C.2

Two Outstanding School Movements.

THE introduction of the individual method of instruction appears to be making headway mainly in the infant and senior departments of primary schools. In the former case, it cannot be said that the experimental stage has yet been passed; in the latter, it has proved valuable chiefly in schools where there is an insufficiency of teaching staff. The moral aspects of the method are in course of development, and there is great professional interest as to the ultimate trend of the movement. The more general adoption of handwork in schools, which was so noticeable before 1914, appears to have suffered a set-back owing to the economy campaign. The building of manual centres has almost completely ceased, and existing centres are not always made full use of. The fact that woodwork and other handicraft subjects have little or no value as qualifications for winning secondary-school scholarships may have some influence in discouraging the teaching of handwork. At the same time it must be admitted that considerable sections of primary teachers have never recognized the exaggerated educational values claimed for various types of handwork.

The Outlook for the Year.

ALTHOUGH the immediate outlook for the primary schools is not bright, there are significant signs of progress. Those who would economize at any cost in national expenditure upon education have been so astounded by the volume of opposition that there is a growing tendency to discuss the problem dispassionately and with deliberation. Education, in fact, appears to have arrived at a stage of development when any substantial economies in the national system will need the approval of the electorate before they can be successfully introduced. Parents take a keener interest in the education of their children than in the majority of questions which politicians conceive to be of prime importance. The deepening of the trade depression has made many people consider, for the first time, the practical values of education; the lessening of the daily working hours has caused masters to exploit the scientific possibilities of education not only from the point of view of securing mechanical improvements, but of ascertaining the connexion between the output of workers well equipped by education and those who are not; the experience of the war has made parents so determined to secure continued education for their children that the cry for more secondary schools tends to increase rather than diminish. There are already signs that the teaching supply is improving so far as women are concerned; and perhaps the weakest point in our equipment is that men are not coming forward to fill the gaps in the teaching service. Notwithstanding the threat of drastic economies in the national service of education there is reason to believe that these will finally be reduced to non-essentials in the schools and the system which governs them. It is an axiom of civilization that the welfare of its children is the foundation of the State.

Teachers and Economy "Cuts."

THE unanimous determination of teachers to oppose reductions in salary scales is largely due to the endless procrastination which marked the action of the Government in dealing with the question in pre-war days. It is not realized so keenly by the general public as by those concerned with the administration of education, that immediately prior to the outbreak of the war, the decision to place teachers' salaries upon a satisfactory professional basis had already been taken by the Board of Education. Neglect of the question during the early years of the war served to accentuate the desperation of men and women who could not exist upon their scant remuneration. The successive delays in the application of the Burnham scales have been borne with ill-suppressed indignation, so that the crowning blow of an imminent further "cut" has set loose the long-accumulated anger of men and women who have borne unprecedented privations during a prolonged period of years.

National Union of Teachers.

THE arrangements for the Easter Conference of the N.U.T. at Torquay promise a very interesting meeting, and it is quite possible that decisions vital to education may have to be discussed. The subjects for the agenda indicate a growing catholicity of outlook upon education. The average teacher who successfully conducts the operations of a local war savings' association or a church bazaar, fails to understand why his presence upon a local education committee should be opposed. The claim for a share in the administration of education is growing in intensity. Other resolutions express disapproval of individual examination of young children, inspection of schools by bands of H.M. inspectors, and the appointment of specialist inspectors who stress unduly the importance of their solitary subjects.

GUY'S HOSPITAL MEDICAL SCHOOL.

THE HOSPITAL, which is situated two minutes' walk from London Bridge, contains 643 beds.

Students are appointed to Dresserships and Clerkships in the Wards and Out-Patient Departments on the Sixteenth day of January, April, July, and October. All Students hold the following posts in turn:—Surgical Ward Clerk; Clerk to Medical Unit, first three months; Dresser to Surgical Unit, first three months; Clerk to Medical Unit, second three months; Dresser to Surgical Unit, second three months; Obstetric Dresser, Extern, and Clerk in the Children's Department; Dresser in a group of Special Departments. Numerous other posts are open for application.

The Medical School Buildings have all been erected or rebuilt since 1904, the Department of Anatomy in 1904, of Biology in 1905, of Physiology in 1910, of Chemistry in 1910, of Physics in 1910, and of Pathology in 1912. The Wills Library was presented in 1903, the Gordon Museum in 1905.

The Students' Club and Residential College were erected in 1890. The Club contains reading, dining, and smoking rooms, while the College affords accommodation for about 60 Students, chiefly those who may be summoned to the Wards at any hour of the day or night.

Adjoining the Club are the Pavy Gymnasium, a covered swimming bath, and a squash racquet court. The Athletic Ground, of nine acres, is situated at Honor Oak Park, distant about 15 minutes by train.

FEES AND COURSES:

First Year.—For Preliminary Science Course: £22. 8s. for 12 months or less period, deducted from the Entrance Fee payable as a Second Year's Student. A special fee of £7 is charged for materials for this course.

Second or Third Year (after First M.B.): Entrance Fee, £28. Annual Composition Fee, £49, including all necessary materials.

Fourth Year (after Second M.B.): Entrance Fee, £14. Annual Composition Fee, £49, including all necessary materials.

Provided a Student has paid three annual composition fees, a proportionate rebate will be allowed from the last on his obtaining an approved qualification at any time within nine months of the last payment.

Entrance Scholarships to the value of £500 are awarded annually in September.

For further particulars, and permission to be conducted over the School Buildings, application should be made to

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

II.

CLASSICS.

By S. E. WINBOLT, Christ's Hospital.

IN an article on the use of archaeological aids in schools contributed to *The Journal of Education* in December, 1919, I tried to illustrate the adaptation of the objective method to classical teaching, and pointed out—what after all is fairly obvious—the importance of the presentation of the thing itself because of the tendency of word symbols to become anæmic. With classical teachers the difficulties are of two kinds—where to get the material, and how to apply it; and it was to the latter of these that I mainly addressed myself.

In the present paper I venture to put before my fellow-teachers definite information about different classes of material. I assume—as I think one may safely do—that objective illustration, used with discretion and some sense of proportion, is of great benefit to classical teachers and learners. I happen to be full of this subject, having just returned from over four months of wanderings in France, Germany, Switzerland, and Italy, the sole object of which was to record for myself and others the kinds of facilities offered by continental museums. Though in my visits to museums I was tempted, often and sore, to enjoy more widely, I kept myself rigidly to this investigation: What service can this museum offer to the teaching of Greek and Roman classics in English schools? There are rich stores awaiting use; it is almost entirely a question of names, addresses, and prices, and such mundane matters. The very considerable amount of definite information I have collected I hope soon to reduce to book form; but meanwhile I trust much of the following may be useful.

I premise that there are two kinds of use that may be made of museum material: first, direct illustration—e.g. the use of a model or photograph of a catapult or a relief plan of Caesar's circumvallation of Alesia; and, second, the gradual cultivation of a sense of beauty, e.g. by the use of photographs, casts, &c., of ancient sculpture and other works of art. Neither of these may be neglected, though possibly (as Mrs. Arthur Strong kindly pointed out to me in a talk at the British School at Rome) the tendency in education is to underrate and neglect the latter. The appeal of ancient artistry in marble and bronze should be given free play, and casts and copies ought to be much more readily available in classrooms and corridors than they are.

Five groups of aids suggest themselves—first, pictures and photographs—by far the most easily obtained and handled, and very effective when the thing has been seen; second, models and casts, including coins, &c.; third, useful books (mainly for the teacher); fourth, the chief classical museums; and fifth, classical sites and buildings.

First: pictures and photographs. One need only refer to the British Museum's printed list of publications, the best thing of its kind issued by any museum in the world, but, for all that, not nearly so well known in schools as it should be. Call or write for it: it costs nothing. The penny photographs alone contain great store of classical illustration. But the Palais du Louvre, in Paris, has an excellent series, with which you can be supplied through the post. Unfortunately there is no printed list, but I have been supplied with the following information. There are about 160 classical subjects to be had in one or other of four forms: photographs (about 8×11 in.), 6 fr. each—carriage to England 1.50 fr. for three copies, or less; carbons, 14×17, 18 fr. each—carriage 2 fr. for three, or less; bromo post cards, 40c. each—post 1 fr. per dozen; ordinary post cards, 25c. each—post 1 fr. per dozen. Write to L'Agent Commercial et Technique, Direction des Musées Nationaux, Palais du Louvre, Paris (I). These photos are all of subjects the originals of which are in the Louvre. At the museum of St. Germain-en-Laye are sold many photos and photo-cards, especially worthy of mention being those of models and plans connected with Caesar's campaigns: address the Director. To be brief, address the Directors of the following museums for all their classical photos:—Brugg, Switzerland; Die Saalburg, near Homburg, Germany; Vatican, Lateran, Terme, and Capitoline, Rome; Naples. Beyond these, almost any subjects can be supplied in bromides at 2.50 lire each (about 6d. each at the present rate of exchange, and one of the few really cheap purchases on the continent) by Alinari Bros., Corso Umberto Primo, Rome, or by D. Anderson, 7 Via Salaria, Rome: either of these firms has some thousands of classical subjects catalogued (catalogue of Alinari, post free about 12 lire).

Of wall pictures there are several series: the Cyburski series, to be obtained from Köhler, Leipzig; the Gall and Rebmann series and the Ad. Lehmann series from Messrs. Pichler, Vienna; and seven Caesar and six Saalburg pictures from A. Perthes, Gotha. The latter thirteen cost me about £2 all told. Lantern slides are already available at the Hellenic and Roman Societies at 9 Bloomsbury Square, and are promised shortly in an attractive form by a new scheme which the Classical Association is taking in hand. The scheme is to supply schools at nominal rates with sets of slides on definite subjects, with accompanying typed lecture notes—e.g. "The Roman Forum," by Dr. T. Ashby; "Horace's Haunts," by G. Hallam; &c. But teachers who are disposed to launch out on their own can be supplied with excellent slides by Vasari, Via della Mercede, Rome. The kinema also may be used in moderation, after due explanation of the subject, and followed by exaction of written accounts of what has been seen. The Musée Pédagogique, Paris, circulates free of charge to schools in France films treating, among other subjects, of Ancient Rome, Naples, Sicily, and Pompeii; and no doubt it has no monopoly of such films. In short, with a little trouble you can get plenty of purely ocular illustration.

Second: models, casts, &c. The two great repositories of models abroad are the museums of St. Germain and Mainz; but it is one thing to see them exposed for a few minutes in a museum, and another to have them always available at need for lecturing, or as examples for pupils to copy. In many cases such models can be reproduced on application to the director, but *combination among schools is imperative*. Obviously, twenty or twenty-five models, in cork or plaster, can be produced at a much cheaper rate than one, and such an order would be more likely to be accepted. I venture to suggest that the Archaeological Aids Committee (Hon. Sec. J. Meek, University College School, Hampstead) is the kind of centre to be used for the purpose of collection of orders. Meanwhile, Messrs. Pichlers (Vienna) supply wooden models of about a dozen things (catapult, Pompeian mill, &c.) at about 10s. each, and much finer ones are made by Moritz Diesterweg, Die Ziel, Frankfurt-am-Main (Greek house, &c.). Prof. Marcelliani (18 Via Foro, Rome) has done the whole of ancient Rome in terra-cotta, and can supply models of individual buildings.

Plaster casts of statuary, inscriptions, &c., can be had in great variety from Brucciani & Co., through the British Museum; the Louvre, from M. Barré; St. Germain, from M. Champion; Berlin, Städtisches Museum; Zürich, Historisches Museum; and—for the Roman museums—from Sig. Vergilio Gherardi, 76 Via Lungaretta; and priced catalogues may be had from all of these, excepting, I think, Zürich. In spite of cost of packing, increased prices of casts, and customs, casts of the masterpieces of ancient statuary still seem to me to be cheap. Once in place they are practically indestructible, and, short of reproductions in marble, are the most valuable means of classical training on the æsthetic side. Marble replicas are to be had to order from an English firm in Italy—apply H. Chignell, Italian Marble Co., Carrara. Replicas of all the best bronzes in the Naples museum and elsewhere are supplied by J. Chiurazzi & Son, Naples; and their catalogue itself is something of an education.

Third: books which can be of great use to classical teachers, whether they are able to travel to the places described or not. I give a list of some of the books treating of things continental which I have myself found very useful and suggestive. "Catalogue Illustré of St. Germain Museum," especially Vol. II, 8 fr., and "Guide Illustré, St. Germain," especially Chaps. 3 and 4, 2.50 fr.—both by Salomon Reinach. "Bilder aus dem Römisch-Germanischen Kulturleben" (R. Oldenbourg, München-Berlin), 12.50 m., a book so full of apposite pictures that a very modest equipment of German scholarship will suffice for its appreciation, a book which ought to be in English classrooms till English publishers can supply its equal. List of casts and models supplied by the Mainz Central Museum, by Prof. Schumacher. "Pompeii, Its Life and Art," by Mau (Macmillan & Co.). "Catalogue of the Naples Museum," 12 lire—in Italian, but easily understood. "Guide to the Terme (Rome) Museum," by Paribeni. Hülsen's "Forum," in English. "Guide to the Thermae of Caracalla," by Ripostelli—in Italian English, but useful (Rome, Alfredo Carlini). Two more expensive books: "The Catalogue of the Capitoline Museum," published by the Clarendon Press, 2 vols.; and "L'Arte Classica," by Pericle Ducati (Torino), 72 lire. This is, I admit, a more or less arbitrary selection, but any three or four of them would contain a mine of suggestion for class illustration. And I would add that those who find a little work with Greek inscriptions useful in the teaching of history cannot go wrong if they buy the Catalogue of Greek inscriptions in the Louvre for 1 franc—a marvel of cheapness and very well done.

Fourth: the museums, for both teachers and taught. Send the boys, take a small party yourself, or see that they get the benefit—if it is the British Museum—of the guide lecturers, an excellent institution apparently unique in Europe. While travelling on the continent, if you happen to be within striking distance of any one of the following do not fail to explore its classical treasures. The Louvre—

statuary, bronzes, terra-cottas, and vases; St. Germain—Caesar and all his works, especially in the deservedly famous Salle Alésia; at Rome, the Vatican—statuary; Capitoline—statuary, inscriptions; the Terme—statuary, mosaics, terra-cottas, glass; Florence, the Uffizi—statuary, the Archaeological Museum, Greek and Roman, and especially Etruscan antiquities; Naples—statuary, mosaics, and unique collections of wall paintings and bronzes; Saalburg, near Frankfurt-am-Main—the museum in the camp is rich in all the things connected with the daily life of the Roman legionary; Brugg, in Switzerland—an excellent collection on the same lines; Basle, Historical Museum—a similar collection; Geneva, Beaux Arts—good classical exhibits, including the Fol collection. There are smaller but good collections at Arles, Nîmes, and Lyon. Apart from marble statues and busts, bronzes small and large, mosaics, terra-cottas, and vases generally, there is a rich field of illustration in marble reliefs of all kinds, but especially those on sarcophagi.

Those who believe in the value of good collections of plaster casts—and of course they have the great merit of being able to group in ordered series the best examples from all the world—may find a very good collection in France, at the Louvre; in Switzerland, at Zürich University; and in Italy, at Rome (in charge of Sig. Bagnani, who speaks English). There are fine collections in Germany, but as I have not seen them I refrain from saying more about them.

Fifth, and last: the best classical sites and buildings, which after all give the most direct stimulus and inspiration. In England we have Hadrian's Wall, and we had Silchester until the site was covered up again; and here and there the remains of a camp, a tower, a villa, and so on. But for a full appreciation of what the Greeks and Romans of our school and university classics were and did, one must see the Acropolis of Athens, and Syracuse, and other sites on the mainland and in the islands. As to the Romans, one can more easily glean an idea of them, as the distance to be travelled is not so great. From Rome one can easily visit Pompeii and Ostia—two excellent types of buried cities partly recovered from long obscurity. In Rome itself, the Forum; the Palatine, the Baths of Caracalla, and the Colosseum in themselves make a fairly complete equipment. In Germany, the unique thing is undoubtedly the Saalburg, a Roman frontier fortress completely restored, which alone can make intelligible much of the military side of our Roman history lessons. Vindonissa, near Brugg, in Switzerland, is another wonderful site, with camp and amphitheatre, but is not easy to get at. Alesia is still more difficult, involving an hour's train journey from Dijon, itself a place most people hurry through on their way to Switzerland or to the Rivières. But it is well worth it: the country of these great works of circumvallation and contravallation is all visible from the top of Mont Auxois, and the Gaulish and Roman towns are being gradually explained by the spade. And the lower Rhone valley is almost as rich a district as one could name, with Arles and its fine amphitheatre and numerous other Roman monuments; with Nîmes, its so-called Maison Carrée, Amphitheatre, and baths; with Orange, and its unique theatre and triumphal arch; and—perhaps the most impressive thing of all—that magnificent Pont du Gard glowing gold in the afternoon sun against a deep blue December sky.

EDUCATIONAL LABELS.

By T. RAYMONT.

THE recent split among the Montessorians in this country may be in some senses a misfortune, but at any rate it suggests a few reflections which we may very well turn to our profit. The cause of the quarrel seems to be that a prominent leader of the movement, a leader by no means without a following, is no longer content that the movement should be described in terms of one distinguished name. He, and those who think with him, object to being labelled. In other words, it is felt that the object of what is called the Montessori Society should be, not a blind hero-worship, not the inculcation, and the defence through thick and thin, of the founder's dicta, but the independent application of the principles underlying her system to the circumstances of English education. I take it that what is probably the main principle, that of treating children as individuals and ceasing to treat them in the lump, is not disputed by anyone. The question in dispute, in this case as in that of the churches, is whether the notion of a fixed and unalterable creed, a creed which moreover goes into detail, is to prevail, or ought to prevail.

In any effort to take the broad view of this controversy, the first thing that strikes one is that the position which it creates is not new, but that history is once more repeating itself. Let us take as illustrations of this thesis the names of Pestalozzi, Froebel, and Herbart, so far as the work of these men has practically affected education in this country. Each of them in turn became a name to conjure with among the "advanced" people in the world of school, who proceeded to label themselves accordingly.

Of the three I have mentioned the least important for our purpose is Pestalozzi, because, as a matter of fact, he has never been much understood or appreciated in England. Some flavour of Pestalozzian methods was introduced by Kay-Shuttleworth into his institution at Battersea, the forerunner of Battersea Training College; but the real beginnings of the influence of Pestalozzi in this country were made in another quarter, in connexion with the beginnings of definite training for infant school work. It is chiefly to Dr. Charles Mayo and his sister Elizabeth that we must assign the honour of originating that form of training. In 1819 Mayo had gone to Yverdon and joined Pestalozzi's establishment as chaplain. After remaining there three years, he opened a "Pestalozzian school" at Ipsom, which was afterwards removed to the neighbouring village of Cheam. Here the brother and sister laboured and brought out a series of "Pestalozzian" textbooks which became exceedingly popular, although (or perhaps because) they formalized, and to a great extent sterilized, the true spirit of Pestalozzi's work. It is because these books became so popular and passed through so many editions that the person who is curious in such things may still find copies of them on street barrows and in the shabbier second-hand bookshops. The movement did its work, such as it was, and the label fell into disuse. The Home and Colonial School Society remains as its monument, but that society long ago, I believe, cast off its Pestalozzian swaddling-clothes.

More important for our purpose, and more interesting to me because of my personal association with its later phases, is the Froebel movement, which started in the 1850's, and, through the efforts of a noble band of women pioneers, and with words of kind appreciation from Charles Dickens, at first made some headway among the well-to-do classes. But in 1874 three things happened which made that year decisive for the spread of Froebelism. The Froebel Society was founded; the London School Board appointed a lady to lecture on Froebelism to the infants' mistresses; and the British and Foreign School Society opened a kindergarten training school at Stockwell. In 1887 the National Froebel Union was formed, and one cannot get a better notion of the change which has come over the movement than by comparing the earlier syllabuses and examination papers of that Union with those of the present time. The spirit is still there,

SIR RICHARD GREGORY has been elected president of the Educational Science Section of the British Association for the meeting to be held at Hull on September 6 to 13 next.

INTERNATIONAL CONGRESS FOR HOME ECONOMICS.—The International Federation for the Development of Home Economics Instruction, the central office of which is in Friburg (Switzerland), have decided to organize an international home economics meeting, to be held in Paris on April 18 to 21, 1922, inclusive, as well as an exhibition of home economics matters—furniture, school materials, and methods. This conference will be in continuation of the international meeting of Friburg (1908) and Ghent (1913). For further information communications should be addressed to the Office International de l'Enseignement ménager, Fribourg (Suisse).

and may it never wane! But the old adherence to the letter, as embodied, for example, in the famous "gifts" and "occupations," is gone for good and all. There have always been people who saw that the strict Froebelians were not really living up to the spirit of their master, but the heterodoxy of yesterday has become the orthodoxy of to-day. True, a foremost representative of Froebelism has recently written a book designed to show that there is nothing of educational importance in James and Ward and Stout which is not to be found, explicit or implicit, in Froebel. Probably she is right, in the sense in which those are right who claim that there are only about two ideas extant which are not to be found in Plato. But, in fact, the old Froebelian orthodoxy is dead, and if the label still remains, it is chiefly to commemorate one of the noblest spirits that have ever breathed over the education of little children. A man may belong to the Aristotelian Society or to the Wesleyan Church, without tying himself down to Aristotle's philosophy or to the details of Wesley's theology. It is in that sense that the Froebel Society still commands wide support.

The case of Herbart comes still nearer home than that of Froebel, in that the whole Herbartian movement arose within the recollection of people who are still on active educational service. Herbart may be said to have come to us from Germany via America. It is just thirty years ago that his theories began to be known in this country through the medium of American translations. Five-and-twenty years ago, not to know Herbart was to argue yourself a pedagogic nobody; and in certain circles a person who knew Herbart and did not confess himself a Herbartian was deemed to dwell in outer pedagogic darkness. In the training colleges the old methods of planning lessons were scrapped, and the use of the five "formal steps," as worked out by the German and American interpreters of Herbart, was insisted upon—often with a result resembling that of placing a man in a strait-jacket. And far beyond the walls of the training colleges, the then blessed word "correlation" was worked for a great deal more than it was worth; to an extent, indeed, which would probably have made Herbart himself gasp and stare. These, however, were but vagaries of a movement which in its essence was truly beneficial, if only because it affirmed that a real art is involved in planning a lesson, and that the "subjects" of which we familiarly speak are not so many watertight compartments. But, in fact, Herbartianism did much more for English educational thought and practice than is here implied, and, if Prof. John Adams's classic work on the Herbartian psychology had been its only fruit, it would have deserved well of us at the present day. No one now labels himself a Herbartian, but most thoughtful teachers of the younger generation owe a greater debt to Herbart than they are aware of.

We now have with us the Montessori system, the Dalton plan, Dalcroze eurhythmics, and what not. Let them all come, and let them all be welcome. Each of them insists upon some aspects of the truth which had been neglected or forgotten. Each of them contributes something which will at last be absorbed into the common stock of generally accepted theory and practice. The systems will have their day and will cease to be; but the spirit which pervades them, together with some of the concrete embodiment of that spirit, will remain. Montessori's re-emphasis of individual freedom, with auto-education as its necessary counterpart, and her insistence upon the school as a social institution, have in them elements of abiding worth which will keep her memory alive long after her "pedagogic material" has gone the way of Froebel's "gifts" and "occupations."

THE EDUCATION GUILD.—Five fortnightly lectures are being arranged by the Education Guild for this term, four of which will deal with the recently issued Report on the Teaching of English, beginning on February 3, at 8 p.m. Non-members of the Guild may obtain tickets for these lectures (1s.) from the General Secretary, 9 Brunswick Square, who will be glad to supply any further information.

PERSONAL PARAGRAPHS.

EDUCATION is represented among the decorations announced in the New Year List of Honours by—

Knights: Cory, Professor George Edward, of the Rhodes University College, Grahamstown, Union of South Africa. Herdman, Professor William Abbott, C.B.E., D.Sc., President British Association. Hobson, Albert John, Esq., President of Association of Chambers of Commerce of the United Kingdom, 1920-21, Pro-Chancellor of University of Sheffield. Pank, John Lovell, Esq., D.L., J.P., Chairman of Hertfordshire Education Committee. Ronald, Landon, Esq., conductor and composer, Principal of Guildhall School of Music.

K.C.M.G.: Lee, The Hon. Sir Walter Henry, Kt., Premier, Chief Secretary and Minister for Education of the State of Tasmania.

C.I.E.: Khan Bahadur Saiyid Abdul Majid, Minister for Education to his Excellency the Governor of Assam. Wathen, Gerard Anstruther, Esq., Ind. Educational Service, Principal, Khalsa College, Amritsar, Punjab.

G.B.E.: Sherrington, Professor Charles Scott, M.A., M.D., F.R.S., D.Sc., F.R.C.P., F.R.C.S., President of the Royal Society.

Companion of Honour: Jones, Sir Henry, M.A., LL.D., F.B.A., D.Litt., Professor of Philosophy, Glasgow. Newbolt, Sir Henry, M.A., LL.D., D.Litt., Barrister and Author.

* * *

THE death of the Rev. P. A. Wright-Henderson, D.D., late Warden of Wadham College, Oxford, removes another link between modern Oxford and the old university. Dr. Henderson came of an old Stirlingshire family, and his father was a clergyman of the Scottish Episcopal Church. He received his early education at Glenalmond, where he was a pupil of the Rev. C. Wordsworth, afterwards Bishop of St. Andrews, and Dr. Bright, afterwards Regius Professor of Ecclesiastical History at Oxford. He went up to Balliol from Glasgow University as Snell Exhibitioner in 1861, and after gaining first class in Classical Moderations and in Literae Humaniores, he was elected a Fellow of Wadham in 1867 and Sub-Warden in 1881. After serving in the latter capacity for over twenty years he was appointed Warden, and held office until his retirement at the end of 1913. He took a considerable part in academic politics as a Liberal at one time, and later he frequently contributed interesting and entertaining papers to "Blackwood," reminiscent of his old days at Oxford and Glasgow.

* * *

THE retirement of Dr. C. W. Kimmins, Chief Inspector of Schools under the London County Council, will be regretted by all associated with London education. Educated at Owens College, University College, Bristol, and Downing College, Cambridge, Dr. Kimmins graduated with first class Natural Science Tripos, Part I, 1883, and second class Natural Science Tripos, Part II, 1886. For many years his vigour and energy have aroused enthusiasm among teachers and educationists in the London area, and his cheerful and pleasing personality has found him friends in every quarter. Before joining the Council's service, Dr. Kimmins was a staff lecturer on the Cambridge University Extension Scheme, and the news that he intends to continue his educational work as a Gilchrist lecturer will be welcomed on all sides.

* * *

MR. H. F. W. DEANE, Chairman of the Year Book Press, Ltd., whose death was reported late in December last, was well known in educational circles. He was educated at Repton and Trinity College, Cambridge. For fourteen years he was a master at St. Ninian's School, Moffat, and in 1895 became head master of St. George's School, Windsor. He retired from this post in 1904, being appointed Chapter Clerk and Librarian to the Dean and Canons of St. George's Chapel, Windsor. Later he established, with his sons, the publishing firm now known as The Year Book Press. He edited "The Public Schools Year Book," "The School-

masters' Year Book," "The Girls' School Year Book," "Directory of Women Teachers," and other standard works of school reference. He was also one of the founders of the "Industrial Art Journal."

* * *

THE Governors of Taunton School have appointed Mr. H. Nicholson to the post of head master in place of Dr. Whittaker, who retires at the end of the summer term to take up other educational work in Bristol. Under the careful guidance of Dr. Whittaker the school has become one of the great institutions in the West Country, and the post of head master one of big responsibility, including the oversight of forty masters and over 700 boys, the majority of whom are boarders. Mr. Nicholson was educated at Merchant Taylors School, Crosby, and King's College, Cambridge. He graduated in 1909 with First Class Honours, Medieval and Modern Language Tripos, and after service as an assistant master at Merchiston Castle and Manchester Grammar School, he became head master of the Watford Grammar School in 1914. During his seven years' tenure as head master the school has doubled in size and two advanced courses have been set up. Mr. Nicholson is an energetic and enthusiastic worker in the cause of education, and he has found time for many activities in educational work outside school life. He is at present filling the office of Chairman of the Modern Language Association, and he is Joint Editor of several French texts for school use.

* * *

THE death of Mr. B. P. Lascelles, formerly Science Master at Harrow School, will be deeply regretted by town and school alike. Mr. Lascelles was a man of rare personal charm. He received his education at Magdalen College, Oxford, where he was familiarly known as the "Magdalen giant," on account of his great height—6 ft. 10½ in. He was Science Master at Harrow for sixteen years, and Librarian and Curator of the Museum for thirty years. He took the greatest interest in the municipal life of the town, and has been a member of the District Council for many years and Chairman on three occasions. The pioneer of technical education in the district, he held office at the time of his death as Chairman of the Education Committee.

ONLOOKER.

TOPICS AND EVENTS.

WE have received a letter from Miss Maria Kakis, Teacher of English at the Government High School, Valmiera, Latvia, whose appeal for English books for Latvian schools we published in a former number, cordially thanking those who have responded to her petition for help. She states that about a hundred books have been sent; more are wanted, especially more of easy books. Her children greatly appreciate learning English from real English books rather than from Russian or German editions. She would also like very much to receive picture post cards of England, and Latvian children would send pictures of their own country in exchange. Mr. West-Deal is going to Latvia next summer to lecture on England and the English, and she hopes that others will follow in his steps. The practical side of education—that is, domestic science, physical training, gardening, and such subjects—is, she tells us, rather neglected in Latvia at present, and she expresses the hope that we shall perhaps some day offer a few scholarships to Latvian girls, so that they may study these subjects here, following the example of the French, who are granting six scholarships to Latvian boys.

THE Lord Mayor of London also desires to thank those who have sent books to his collection for Latvia.

LECTURES ON PSYCHOLOGY.—A course of eight lectures on "The New Psychology and its Bearing on Education" are being delivered by Dr. H. Crichton Miller at the Mary Ward Settlement, Tavistock Square, W.C.1. The first address (on "Suggestion") was delivered on January 27, and the remaining lectures are to be given on Fridays at 5.30, commencing February 3. They will deal respectively with Phantasy, the Emotional Development of the

Child (in two lectures), the Unconscious Motive, Mental Mechanisms, Symbolism, the Herd Instinct and the Herd Ideal. Tickets for the course can be obtained from the Hon. Lecture Secretary, Tavistock Clinic, 51 Tavistock Square, London, W.C.1, price (for qualified teachers and the general public) two guineas, and (for students of education and Settlement workers) one guinea.

BOOK FAIR AT FLORENCE.—An International Book Fair will be held, under the auspices of the British-Italian Commercial Association, at the Pitti Palace, Florence, next spring. The fair will be made up of sections on popular education, books, old books, manuscripts, rare editions, book illustration and binding, photography and cinematography applied to printing, posters, and machinery and appliances for the printing and allied trades. For further information those interested should write to the Association, at 12 Nicholas Lane, London, E.C.4.

VERSE COMPETITION.—In the second half-yearly schools competition held by our contemporary, *Poetry*, the entries from boys' schools are said to be inferior in quality to those from girls' schools of the same grades. The editor suggests that this difference depends more upon the attitude of the teacher than the ability of the pupil; and this seems probable, for in most boys' schools less time and attention are devoted to English than in girls' schools. Moreover, entries from the "public schools" were "few and comparatively disappointing." May this not be due to the same regrettable cause?

REVIEWS AND MINOR NOTICES.

NEW MUSIC.

THE comparatively recent introduction into schools of classes for stringed instrument players was handicapped to a large extent by a scarcity of suitable material graded in a way likely to ensure progress from the very first steps. In the "Polychordia String Library," Messrs. Stainer & Bell have set out to supply this deficiency, and, under the editorship of Mr. James Brown, are issuing a series of books in five grades, in order to provide in one systematic and comprehensive scheme "all that is necessary for the acquirement of the art of ensemble playing." This series is preceded by an "Elementary String Tutor," which will be of especial use to teachers commencing class work of this description. In the lower, middle, and higher grades, the examples for the most part are taken from the great masters, and many unfamiliar works by Gluck, Handel, Morley, Bach, Purcell, Corelli, &c., figure in the scheme. These have all been carefully fingered, bowed, and a pianoforte part added, which can, of course, be dispensed with when the harmony of the strings is complete.

A scarcity of good school part songs happily does not exist, and, if the output is large and the choice difficult, the quality is well maintained, as is exemplified in some of the recent publications of the Yearbook Press—"The Dream of Home," by Charles Wood, and "The Vagabond," by Dunhill, both unison songs. The Curwen edition, "The Night Bird," is a three-part song by Edgar Bainton, and the old Irish peasant song, "Tis pretty to be in Ballinderry," is arranged by Alfred Moffat and published by Joseph Williams. A comprehensive collection of songs of all kinds (folk songs, Scottish, Welsh, and Irish songs, rounds, catches, and marching songs), which can be cordially recommended for school use, is entitled "Songs from Far and Near," and is published by McDougall's Educational Co., Ltd. (8s.).

The catalogue of Messrs. Curwen & Sons will be found to contain an almost endless selection of plays with and without music, suitable for school performance. Recent publications include "A Masque of Midsummer," by Marjorie Woolnoth, music (and very nice music too, far above the average for this kind of thing) by Richard Chanter. Mr. Herbert Blatch has written some tuneful music to "The Yellow Cap," a fantasy for children in one act, the book by Charles Emlin. Except that the opening chorus, "Far in the Woods," savours too much of the popular ballad type of setting, this is a little play that should come off well in performance. A more ambitious effort from a musical point of view is "Dream Webs," a choral ballad for children, words by Smaylie, music by

Bernard Johnson (2s. 6d.). Much of this is written in two parts. Mr. Johnson's music is melodious, refined, and never commonplace, while the accompaniments are independent of the voice parts, rendering the necessary support at crucial moments—instance the accompaniment to the valse "A Network of fine Silver Strands"—yet always maintaining an independence which adds much to the charm of the music. A capital cantata this for "end of term" performance. Jolly tunes, just sufficient dialogue to string them well together, and you have a folk-music play entitled "Christmas Eve" (5s.). Mr. Herman Ould, the compiler, has drawn on old songs and dances from many sources, and most of these will be already familiar in schools which indulge in folk-singing and morris dancing; therefore the "getting up" of the play should be an easy matter. The stage directions are concise and to the point, the setting and stage properties of the simplest, and the play has the atmosphere of the old time "Dickens" Christmas, and is therefore sure to be popular. Appropriate to the season is "The First Christmas Pudding," words by Elsie Smith, music by Percival Garratt. For scout clubs there is "The Ginger Beer Party," a sing-song for wolf cubs, written by Charles Emlyn, with music by H. Blatch; and we must round off the long list of Messrs. Curwen's publications with brief mention of "Phillida, or Love on the Prairie," a full-blown operetta in two acts, by Stanley C. West, music by Chastey Hector (vocal score, 5s.).

A new "Violin School" is something of an event, and students and teachers alike will welcome "The Practical Violin School," in four volumes (3s. net each vol.), which Hans Wessely has published with the firm of Joseph Williams. The description and examples of the various kinds of bowing are well set forth, and the difficulties of fingering, &c., are progressively dealt with in a series of short studies. A work which could be used with advantage alongside Mr. Wessely's book is the series of "Progressive Studies for the Violin," graded, arranged, and fingered by Spencer Dyke (five books, 2s. 6d. net each, Joseph Williams). Spohr, Wohlfahrt, Dont, Marzas, McKenzie, Fiorillo, and many other composers are represented, and the purpose of each study is clearly indicated. The advantage of such a varied collection of studies under one cover is obvious. Violin music of a more recreative type, and with pianoforte accompaniment, figures largely in the catalogue of the same firm, and the more recent additions include three lyrics ("Reverie," "Arabesque," and "Barcarolle"), by George Dyson (2s. net each); an album of four short and easy pieces, by Markham Lee (2s. 6d. net); six miniature sketches by Charles Marshall, very easy; and two books in "The Album Series," price 2s. 6d. net each. 'Cellists will welcome the collection of seven Russian pieces, which Mr. Whitehouse has brought under one cover and edited; and an effective solo for the instrument comes from the pen of Dr. Brewer, entitled "Harlequin's Lament" (2s. net).

Colin Taylor's "Prelude" in five-four time (2s. net) has the delightful savour of an old folk-song, while the "Rustic Dance," by Scott Baker (1s. 6d. net), takes one back to Elizabethan days, the days of "Merrie England" dancing out of doors. Thomas Dunhill, with his "Dance Moments" (2s. 6d. net), enters the baronial hall, and steps to the stately "Saraband" and "Gavotte," while Felix Swinstead, with his "Six Pieces for Children" (2s. 6d. net), and Adam Carse, "Five Little Pieces" (2s. 6d. net), set out to please the young folk, and restore to them their birthright "Time and Tune," and eminently succeed in doing so (Joseph Williams).

The somewhat austere covers of similar publications by Stainer & Bell (Joseph Williams often issue pictorial covers) seem to suggest that the quality is "inside," and it certainly is in the little "Suite," by Herbert Howells, entitled "Once upon a time." No. 3, "An Angry King," is a masterpiece, and should be re-christened "Karl, ex-King of Hungary"! These pieces are very modern in their outlook, and call for more than average ability on the part of the pupil for their proper interpretation. Sir Charles Stanford wields the wand of youth in "A Toy Story," an album of six little pieces (2s. net). Other composers in a lengthy list must be satisfied with a mere mention—viz. George Dyson, "Six Lyrics" (2s. net);

Thomas F. Dunhill, "Time and Tune" (2s. net); Percy Whitehead, "Triples" (1s. 6d. net); Graham Forbes, "Moods" (1s. 6d. net). All will be found to merit the attention of the educationist whose need it is to be always provided with the latest and the best of contemporary music. They are all published by Stainer & Bell.

A PHILOSOPHY OF EDUCATION.

The Individual and the Environment. By Dr. J. E.

ADAMSON. (14s. Longmans.)

Books on education—or, at any rate, the more serious of them—may be divided roughly into three classes: those which seek to meet the immediate and practical needs of the educator, and to do so in a frankly empirical way; those which advance beyond empiricism to a systematic treatment, based upon principles drawn chiefly from psychology; and those which essay a still higher flight—a philosophy of education regarded in all its length and breadth. It is to the last of these three classes that Dr. Adamson's book belongs, though there is much that connects it with the other two. The workaday teacher usually contents himself with the first of our three divisions; he often looks askance at the second, and if a specimen of the third comes his way he shuts it with a sigh, or perhaps with a bang. We state what we believe to be the simple fact, without expressing approval or disapproval, for in the teaching, as in other professions, only a minority of practitioners can be expected to enjoy such solid fare as Dr. Adamson provides. He has in view chiefly the university student of education, who ought betimes to have his attention directed to the widest view of the educational process and who, to say the least, will never be the loser on that account.

The attempt to treat education on the most comprehensive scale inevitably attracts the educational writer of the philosophic cast of mind. Such attempts have been made in America by Prof. Henderson in his "Principles of Education," and by Prof. O'Shea in his "Education as Adjustment." More recently, in England, Dr. Nunn, in his able and concise work on "Education, its Data and First Principles," and Dr. Maxwell Garnett, in his elaborate treatise on "Education and World Citizenship," have similarly taken the big view of the subject. Of course, these books cover very different ground, or, at any rate, cover the same ground in very different ways. The sub-title of Dr. Adamson's book, "Some Aspects of the Theory of Education as Adjustment," sufficiently indicates its general kinship to O'Shea's earlier production.

Dr. Adamson avoids the necessity of discussing the definition of education by accepting at once the evolutionary view. For him the conception of the adjustment of individual and environment is "the fundamental principle about which a rational theory of education can be developed," and from that point he takes his start. He conceives the environment as made up of three orders of reality—the physical order, or the world of Nature; the social order, or the world of civilization; and the moral order; and if the separation of the second from the third should be objected to, he pleads convenience, at any rate, for the expounder of educational theory. Space does not allow us to follow Dr. Adamson in his detailed working-out of the principle of adjustment from these three points of view. We may say, however, that it is plain on every page that he upites in himself the qualifications of the practical teacher with those of the serious student of philosophy. His erudition is enormous, but he keeps it well in hand, his exposition being so orderly that his numerous authorities are not allowed to jostle one another on his pages. And, if his learning and his vast labour exceed his originality, he has none the less—or perhaps we might say, he has on that account—written a book which should be useful to the student. The analytical table of contents, and the full index, will make it useful to many who have not time for reading it from cover to cover.

THE NEW PSYCHOLOGY.

The New Psychology and the Teacher. By Dr. H.

CRICHTON MILLER. (6s. net. Jarrold.)

Anyone who, like the present reviewer, has heard Dr. Crichton Miller lecture to teachers and to others of the

better educated public, will be prepared to welcome a book from him designed to initiate such persons into the "new psychology." Dr. Miller has deliberately preferred this title to that of "psychoanalysis," leaving the latter term for the Freudian school, who claim it for their own theory and technique. His treatment is of special value to the general reader, because, thoroughly appreciating the fundamental differences between Freud and Jung, he claims and exercises his obvious right to take a line of his own. The prevailing fashion in education and psychology is that of labels and hero-worship. Instead of following that fashion, Dr. Miller, whilst freely adopting all that seems to him sound in the work of the founders of the new psychology, insists on seeing things with his own eyes and forming his own conclusions. This he is well qualified to do, and to anyone who has waded through the muck-heaps provided by some of our psychoanalytic expositors, it is a joy to come across a book so full of sanity, and so much truer—at least, so one hopes—to the facts of human nature as a whole. That the writer feels able to dedicate the book to his own children is a sort of notice to parents and teachers who start reading it that they are likely to find what they want. And they will not be disappointed. The chapters on the emotional development of the boy and of the girl are, for example, full of good material clearly put, and we can hardly imagine an educated parent who will not be distinctly the wiser for reading them. The momentous consequences, as described by Dr. Miller, of the relations between mother and son, and between father and daughter, will, we believe, come home forcibly to any observant parent. As becomes one who is not a professional teacher, the author does not dogmatize on strictly educational questions. In the last chapter he points out some of the more general bearings of the new psychology upon the teacher's work, but for the rest he is content to "help the teacher to gain something of the analytic point of view," and then to leave him to draw his own conclusions. He adds a list of the books to which he feels most indebted, and which are presumably meant for the student's further guidance. We commend the book most cordially to the attention of our readers.

AGRICULTURE IN HISTORY.

Agricola: a Study of Agriculture and Rustic Life in the Greco-Roman World from the Point of View of Labour. By W. E. HEITLAND. (47s. 6d. net. Cambridge University Press.)

"Back to the Land" is a cry as old as the oldest history of man. From the earliest times, ever since man began to gather into settlements, his social nature has preferred the crowd in the market-place to the loneliness of the countryside; and the owner of the land has left the soil to be tilled by others while he built himself a dwelling-place in the town. That the manual labourer on the farm has always been in disrepute is shown by Mr. Heitland's book, and that it still is so is shown by the decrease of the country population in the United States from 85 per cent. in 1880 to 48 per cent. at the present date. Yet as surely as man requires bread, so surely must some one cultivate the solitary fields. On the solution of this problem depends the very existence of civilization. The ancient world, resting upon the basis of slavery, compelled large numbers of mankind to do its drudgery, and when this basis proved incapable of bearing the ever-increasing burden thrown upon it by the Roman Empire, the fabric of ancient civilization collapsed. Ancient slavery in Europe gave way to medieval serfdom, and this, through abolition, to the modern free wage-earning class. Our problem is to reconcile this class to the task of being hewers of wood and drawers of water; and, although mechanical contrivances have lessened transport difficulties and eased the heavy burden of physical toil, they have also extended the country into vast prairies, so that the farmer of north-west Canada is still as lonely a person as the tiller of Italian uplands or African latifundia under the government of Rome. Mr. Heitland, therefore, in this "study of the life of the farmer in ancient times," is not dealing with a recondite subject, but one which is of the first importance for

its bearing on general economics. He rightly insists on the historic continuity of man's development, and, although he has no set thesis to maintain, his work is pregnant with suggestiveness for modern statescraft. He has gathered from the whole range of Greek and Latin literature all the facts bearing on his subject. He has taken the authors from Homer to the fall of the Western Empire, and set forth the attitude, as shown in their writings, of the different periods in chronological order towards the life and work of the farmer. His divisions are: The Greek Period; Rome—the Early Period to 200 B.C.; The Middle Period; The Empire; Augustus to Nero; The Age of the Flavian and Antonine Emperors; Commodus to Diocletian; From Diocletian; and Christian Writers. With rare exceptions, arising partly from military and partly from political causes, the farmer's work was held in little honour—*laudatur et alget*. The tendency was more and more to regard it as menial, and to leave it to the lowest classes. At the same time, in the absence of an industrial system creative of wealth, it was more and more called on to bear the increasing burden of imperial expenditure. Slavery proved insufficient for this strain, but no one had any substitute to offer. Of the three parties concerned with landed property, the owner had long ceased to care for anything but profits; the farmer who worked his own soil had been squeezed out; and the third class, the labourer, invariably a slave, was ground down under pitiless overseers. The inroads of the barbarians proved a welcome relief from a system more and more inefficient and impossible.

Mr. Heitland's book is a noteworthy study; its range is remarkable; its argument always clear and sound; it is a splendid work of classical scholarship, and it proves that the study of ancient history is indispensable for a considered approach to the problems of the modern world.

CHARTERHOUSE.

Charterhouse in London: Monastery, Mansion, Hospital, School. By G. S. DAVIES. (25s. net. Murray.)

This book can best be described as a labour of love. It is written by the man who, from his position and interest in the Charterhouse, is best qualified to write on the subject. Mr. Gerald S. Davies, the Master of the Charterhouse, was Foundation Scholar at the Charterhouse School when it was still located in London, before its removal to Godalming, one of the most enterprising changes in the continuous development of a public school in the last generation. Mr. Davies was nearly thirty-three years on the staff of the school at Godalming. He then returned to the fine old Charterhouse building, still retained as the residence of the Brotherhood of Aged Pensioners, over whom the Master presides. Thus, for over sixty years Mr. Davies has been in intimate connexion with Charterhouse School and Hospital. He has thus collected much information "which from time to time has been revised, recast, verified, rejected, till the note-books have swelled to many volumes." In short, it is obvious that we have here the definitive history of this remarkable foundation, one of the most representative of pre-Reformation buildings and establishments, continued from the days of the old Carthusian Monastery as a mansion, purchased by the well known John Dudley, Duke of Northumberland (father-in-law of Lady Jane Grey), as Mr. Davies thinks, to serve as a palace for his son and daughter-in-law, till the day when the latter, as he hoped, would become Queen of England. In 1565 the Charterhouse became the property of the Duke of Norfolk, and received the name of Howard House. From Thomas Howard, Earl of Suffolk, in 1611 (unfortunately misprinted in Mr. Davies's volume as "1911"), it was purchased by Thomas Sutton, who founded the Hospital and Free School, and nominated, as first master, John Hutton, rector of his old parish of Littlebury, in Essex. With scrupulous care, Mr. Davies traces for us the life and career of Thomas Sutton, who came, as is well known, from Lincolnshire, and had led a romantic life in the Elizabethan era.

The account of the Hospital takes up twenty-four pages and that of the School is restricted to scarcely sixty pages; yet these sketches supply the essential facts, in a small space.

The volume runs in all to 447 large octavo pages, and is a handsome book. As will be readily understood, it contains valuable documented history, presented in a number of appendices, supplementary to the descriptive continuous history. First, we have details of the existing buildings of Charterhouse (the Monastery was founded in 1314); then follow documents relating to the Monastery, documents relating to the Mansion, and, lastly, lists of masters, preachers, schoolmasters, governors of the School, and so on. A list of some distinguished Carthusians is provided. The "Carmen Carthusianum" is reprinted. But most impressive to many readers will be the long appendix G, containing the names of Carthusians serving in the British and Allied Forces from August 4, 1914, to November 11, 1918, and in the subsequent Russian Campaign.

Mr. Davies's book is a thorough piece of work. It is attractively provided with a large number of striking illustrations. Altogether, we have a continuous record of Monastery, Mansion, and School (in so far as the school is bound up with the Charterhouse building). We feel that we have been brought face to face not only with the records of the Charterhouse, but that of London history; and even much of national history, from 1314 onwards, might well be centred round it in the class-teaching of the Charterhouse School.

SCIENCE.

The Outline of Science, Part I. Edited by Prof. J. ARTHUR THOMSON. (1s. 2d. net. Newnes.)

The issue of "An Outline of Science," comparable in size and general get-up with Mr. Wells's "Outline of History," will be watched with much interest. It is intended to bring out the book in about twenty fortnightly parts, and as Part I consists of forty pages (including forty-five excellent illustrations), the whole presumably may be expected to cover some eight hundred pages. To attempt in this space to provide "the general reader who lacks both time and opportunity for special study" with a conspectus of modern chemistry, physics, astronomy, geology, biology, and psychology is ambitious indeed. The contributors of the several sections are not named, but, as the editorship is in the capable hands of Prof. Thomson, who, in numerous books and numberless articles on various aspects of biology, has shown himself a past master in the art of popularizing science, the new serial may be confidently expected to be both accurate and eminently readable. It should appeal with peculiar force to teachers.

"The 'Shown to the Children' Series."—*British Insects shown to the Children.* By A. O. COOKE. (3s. 6d. net. Jack.)

This is a very attractive little book, and will be read eagerly by many young naturalists. Mr. Cooke gives pleasant and simple accounts of the appearance and habits of forty common insects and four common spiders. His method of grouping these creatures according to habitat, irrespective of their systematic position, is, we think, wise in a book intended for children. There are forty charming and useful illustrations, some in colour, by Mr. Harold Bastin. They would have been still more useful if the scale had been stated in each case.

Life: How it Comes. By STEPHEN REID-HEYMAN (Mrs. LAURENCE PARSONS). (5s. net. Blackwell.)

The very great need—referred to in the Bishop of Birmingham's foreword to this book—of a reverent and clear statement to children of the truth connected with the facts of sex is admitted by all. How and when it may be best imparted are questions on which there is much difference of opinion. The author of this book would give the necessary information by means of lessons in biology, explaining the significance of sex in plant and animal types of increasing complexity, and culminating in man. In eighteen interesting chapters she has developed such a course with marked ability, and the book may be recommended for supplementary use in schools in which biology is already studied practically. We are convinced, however, that such work, though extremely useful in the later years of school life, would come much too late to accomplish its special object. We believe that every child ought to know the essential facts relating to mammalian reproduction long before it is old enough to use such a book, and even before it is able to read at all. To be told the plain truth about such things in answer to its questions is no shock whatever to a young child, and saves it from much subsequent trouble of mind. Treated frankly from the first, as is its right, it may grow up with clean pride, instead of shamed acquiescence, in the great heritage of sex.

Letters to my Grandson on the World about him. By the Hon. STEPHEN COLERIDGE. (4s. net. Mills & Boon.)

This pleasant little book, in which a grandfather discourses to his

grandchild very entertainingly about the universe in which we dwell, is of a kind which was much more in evidence when the author was young than at the present time. We are old-fashioned enough to believe that the author is right in his implication that the change which has taken place is not entirely to the good. Amid the variety of imaginative literature now offered to children we are not sure whether many little boys of this generation would settle down to the perusal of a book, even so excellent as this one, about the things that really are. But, at any rate, the "group mind" of children so far differs from the mind of the individual child that we can promise any teacher success who tries these easy and familiar talks on a class of boys. Such readings would form a most acceptable complement to more formal lessons on the elements of science and Nature lore.

Readings in Evolution, Genetics, and Eugenics. By Prof. H. H. NEWMAN. (25s. net. Cambridge University Press.)

By preparing this book, which is essentially an anthology of writings on evolutionary biology, Prof. Newman, of the University of Chicago, has supplied a real need of students. For not only has he included excerpts from the works of leading evolutionists, both classical and modern, but by contributing introductory statements, connecting passages, and the like, he has succeeded in arranging and welding together a large number of isolated chapters and paragraphs into a coherent exposition of the whole subject. Moreover, the book, being made up of the writings of many authors—of whom not a few were unsurpassed for simplicity and lucidity of language—presents clearly many diverse theories, and is completely non-partisan. The order of treatment is judicious. After an introductory and historical section, the evidences of organic evolution are set forth; then follow articles discussing the causes of evolution; and, finally, chapters on the various aspects of genetics and eugenics. The result is an unusually interesting and stimulating book. It is, perhaps, natural that it should include a preponderance of extracts from American authors, but British readers will welcome it not less warmly on that account. There are 101 illustrations and a good index.

A Course of Reading in Science and Literature. Selected or Contributed by Prof. J. ARTHUR THOMSON and Others. Part I. (3s. 6d. net. Oliver & Boyd.)

One of the many unfortunate results of our narrow and vicious conception of "literature" is that boys and girls seldom read anything about science except in text-books. To this generation there is between "literature" and science a great gulf fixed; the truths of science are rarely expressed in literary form, and "literature" has nothing to do with the truths of science. The present compilation is based on opposite principles; it includes selections from the masters of science as well as from historians, travellers, and thinkers, and it aims at making children read for information no less than for entertainment. The biographical notes reveal the varied nature of the extracts. Ruskin, Rutherford (Sir Ernest), Shakespeare, Shipley (Sir Arthur) come in succession, whilst elsewhere Byron and Carlyle rub shoulders with Darwin and Faraday. It is a fresh and live compilation. A word of praise is due to the admirable type.

ART.

"New Era Library."—*The Romance of Building.*

By ALLEN S. WALKER. (2s. 6d. net. Philip.)

Mr. Walker, like a true teacher, begins by asking questions: "Which building do you prefer—St. Paul's or Salisbury Cathedral? Which is the more suitable church for England?" From this latter interrogation it will be gathered that he does not deal solely with the æsthetic side of architecture, but discusses its utilitarian aspects. He begins with ancient India and Egypt, and takes his reader through Greek and Roman building to Saxon, Norman, Gothic, Renaissance architecture and the modern schools. The chapters on Inigo Jones and Wren are particularly informing. Mr. Walker does not turn up his nose at recent architecture, and amongst buildings whose merits are recognized we note the Imperial Institute, St. Mary's Church at Stoke Newington, the Catholic Apostolic Church in Gordon Square, and the Guildhall at Westminster. The work is a useful little introduction to architecture of 240 pages, and is embellished by sixteen full-page illustrations and over twenty woodcuts.

The Child in Art and Nature. By A. A. BRAUN. (16s. net. Batsford.)

This book, though intended primarily to appeal to the child-lover, is also planned to be a useful addition to the reference library of the artist, and it achieves both these objects with considerable success. The diagrams and letterpress contain much information which should be of value to the student; but the text is quite subordinate to the well chosen and beautifully reproduced illustrations, which, as the name of the book implies, are classified

(Continued on page 96.)

MACMILLAN'S NEW LIST.

NINTH EDITION, REVISED.

Introduction to Physical Chemistry.

By Sir JAMES WALKER, LL.D., F.R.S. Ninth Edition. 16s. net.

THIRD EDITION, REVISED.

A Text-Book of Zoology.

By the late T. J. PARKER, D.Sc., F.R.S., and W. A. HASWELL, D.Sc., F.R.S. Third Edition, thoroughly revised. In two vols. 50s. net.

SECOND EDITION, REVISED.

Introduction to the Mathematical Theory of the Conduction of Heat in Solids.

By H. S. CARSLAW, Sc.D., F.R.S.E. Second Edition, completely revised. 8vo. 30s. net.

W. & A. K. JOHNSTON'S Publications.

THE EDINA GEOGRAPHIES.

Reduced Prices—Manilla covers, 1s. net; cloth backs and stiff sides, 1s. 4d. net each.

Book I.— British Isles.	64 pp., 11 Maps.	Ready.
Book II.— Europe.	72 pp., 14 Maps.	Ready.
Book III.— Asia.	63 pp., 12 Maps.	Ready.
Book IV.— Africa.	64 pp., 21 Maps.	Ready.
Book V.— North America.	64 pp., 14 Maps.	Immediately.

The characteristics of this series are:—**Conciseness, Clearness, Cheapness.** They are specially suitable for use for University Locals and Civil Service Examinations. Each lesson is followed by appropriate exercises.

THE EDINA HISTORIES.

Reduced Prices—Manilla covers, 1s. net; cloth backs and stiff sides, 1s. 4d. net each.

Book I.— The Age of Settlement.	B.C. 55–1154.
Book II.— The Age of Chivalry.	1154–1485.
Book III.— The Age of Adventure.	1485–1603.
Book IV.— The Age of Strife.	1603–1713.
Book V.— The Age of Empire.	1713–1815.
Book VI.— The Age of Democracy.	1815–1918.

These histories are written on the latest approved methods, each chapter being devoted to tracing some historical movement of the period. Natural history is the basis, but it is shown in its proper setting as part of the development of civilization in the World as a whole.

The O.R.E. Atlases (Orographical, Regional, Economic). 32 pp. of coloured and black and white maps, and Index to each part. 1s. 6d. net each.

Part I.— The British Isles.	Ready.
Part II.— Europe.	Ready.
Part III.— Asia.	Ready.
Part IV.— Africa.	February.

NEW EDITION.

The Navy League Wall Map of the British Empire.

The first edition of this famous Map to be completed since the Peace Treaties is now ready. It is strikingly and clearly lithographed in colours, showing the latest Political Boundaries, Mandate Territories, Railways, Sea Routes, Coaling Stations, Docks, &c. Tables give the principal naval events of British history of the Great War, distances by sea, and British Shipping Companies. Size 72 in. by 63 in. £2. 2s. net, mounted on cloth rollers and varnished.

NEW EDITION.

The Commercial and Library Chart of the World. (72×54 inches.) £2. 5s. net. Mounted on cloth and rollers, and varnished.

(W. & A. K. Johnston, Ltd.)

The new edition of this Chart, invaluable to the business man, shows, in addition to the latest political World boundaries, detailed information as to Railway and Steamship Routes, Coaling and Oil-bunkering Stations, Cables, &c. Inset Maps give the great Trans-Continental Railways and the Panama and Suez Inter-Ocean Canals.

A Short History of British Expansion.

By JAMES A. WILLIAMSON, Author of "The Foundation and Growth of the British Empire," &c. With 21 Maps (8 in colour). 25s. net.

Our Hellenic Heritage.

By H. R. JAMES, M.A. With Illustrations and Maps. Vol. I: Part I, The Great Epics. 3s. 6d. Part II, The Struggle with Persia. 3s. 6d. 2 parts in 1 vol., 6s. net.

Education.—"The author brings to his task a rare critical acumen, combined with deep scholarship, and his book is the outcome of both these gifts. Added to which he possesses a capacity, not unlike Walter Pater, for writing English in such a way as to suggest Greek culture and customs."

Noctes Latinae Alterae.

Written, Adapted, or Arranged by WALTER MADELEY, M.A. With Illustrations. Pott 8vo. 2s. [Elementary Classics.]

SCHOOL EDITION. JUST PUBLISHED.

The Odyssey of Homer.

Done into English Prose. By S. H. BUTCHER, M.A., LL.D., and A. LANG, M.A., LL.D. School edition. Manilla Cover, 4s.

Classical Gold in English Renderings.

Chosen by RICHARD LAWSON, M.A. With an Introduction by FRANK TATE, C.M.G. 3s.

A Commentary on the Holy Bible.

By various Writers. Edited by the Rev. J. R. DUMMELOW, M.A. With Maps.

Old Testament. Genesis—Esther. 4s. 6d. net.

New Testament. St. Matthew—Acts. 4s. 6d. net.

* * Also published complete in 1 vol., 12s. net.

English Literature Series for Schools. New Vols.

Lamb. Tales from Shakespeare.

Selected and edited by H. A. TREBLE, M.A.

First Series. 1s. 6d. Second Series. 1s. 6d.

Geography for Senior Classes.

By E. MARSDEN, B.A., F.R.G.S., &c., and T. ALFORD SMITH, B.A., F.R.G.S. With Maps and Illustrations. 7s. 6d.

The Journal of Education.—"It covers fully the course in physical and political geography for the general school and matriculation examinations. All who have been concerned with its production have done their work well, and the result is a remarkably good text-book."

Principles and Practice of Business.

With Examination Questions in the Theory and Practice of Commerce, Business Organization, and Commercial Correspondence. By G. MAIRET, Lecturer in Commerce at the City of London School. 5s. [Life and Work Series.]

The Elements of Physics and Chemistry.

A Practical Course for Middle Forms. By Sir RICHARD GREGORY and A. T. SIMMONS, B.Sc., with the assistance of F. W. HODGES, B.Sc. 4s. 6d.

First Books of Science. New Vols.

A First Book of Applied Electricity.

By S. R. ROGET, M.A., A.M.Inst.C.E., &c. Illustrated. 2s. 6d.

A First Book of General Science.

Introduction to the Scientific Study of Animal and Plant Life. By A. T. SIMMONS, B.Sc., and A. J. V. GALE, B.A. Illustrated. 2s. 6d.

The A.M.A.—"The aim of the authors is to provide a preliminary course of science which can be readily developed into a serious study of plant and animal physiology, and they appear to have carried out their intention excellently well."

An Introduction to Engineering Drawing.

By J. DUNCAN, Wh.Ex., M.I.Mech.E. 4s. [Life and Work Series.]

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

under two headings. Under the first, "The Child in Art," the author has brought together a representative collection from the "fine" and "applied" arts. A few Greek and Roman examples are given; but this section practically starts with the Renaissance, as the ancients generally represented the child as a mere miniature adult, the outstanding exception being "The Boy with the Goose" by Boethius, second century B.C. In the second section, "The Child in Nature," the great beauty of the photographs is not helped by some of the rather irrelevant and inappropriate titles given them. Such a heading as "Little Somebodies" smacks of the cheaper sort of magazine, and is unworthy of the book.

Stencil-craft. By HENRY CADNESS. (10s. 6d. net. Pitman.)

As an exercise in pattern design for teaching the beauty of the convention which has its origin in a frank admission of the nature and limitations of material and method, stencilling has much to recommend it as an educational craft. It also has the advantages of being easily treated as a class subject and of requiring no special and costly equipment. Its limitations, from the point of view of the educationist, are that it deals solely with the decorative side of design, and not at all with the more important beauty which is dependent on structure. It is, however, well worth a place in the art syllabus of the secondary school, while for the art student it is a craft of considerable commercial value. Mr. Cadness, who is a teacher of experience, has given us a well written, well illustrated, and exceedingly practical manual of the subject, which should be of equal value to the teacher, student, or craftsman.

HISTORY.

"University of London Intermediate Source-Books of History."—No. III: *England Under the Lancastrians.* By J. H. FLEMMING. (12s. 6d. net. Longmans.)

Miss Fleming's volume of extracts from original sources follows the lines laid down by its two predecessors in the London Intermediate series. It begins with a scholarly and illuminating account of the primary authorities for the Lancastrian period. Then it gives a copious collection of gobbets classified under the headings: (1) Political, (2) Constitutional, (3) Ecclesiastical, (4) Economic and Social, (5) Ireland. The value of the book would have been greatly enhanced if the extracts had been accompanied by fuller explanations of why they have been chosen and what is their significance. As it stands, the volume is too much a mass of undigested material, beyond the assimilative capacity of the average intermediate student. The use of this illuminating series of source-books in schools and by private readers is discouraged by the stern determination of the editors to give no assistance to students in their endeavours to discover what it is all about. The political histories to which they refer their bewildered disciples do not give adequate information in the ecclesiastical, social, and economic sections. In the case of the present volume, a further discouragement is its abnormally high price.

A History of the Perse School, Cambridge. By J. M. GRAY. (10s. 6d. net. Bowes.)

Mr. J. M. Gray has produced a book which is of deep interest, not only to educationists, but to all students of English social life during the past three hundred years. He begins with a sketch of Dr. Stephen Perse, Fellow of Caius College, founder of the school, a worthy man who oscillated in a curious manner between divinity and medicine, during the half-century 1565-1615. Perse, in his will, left property calculated to bring in £60 a year for the maintenance of a free school with a master and an usher. In the course of two centuries the value of the property increased tenfold; but the school was allowed to languish, while the trustees increased their own emoluments from £9 to £840 per annum. A reformation and reconstruction were made in 1841, and since then the record of the school has been one of continued and remarkable progress.

The King's Council in the North. By Dr. R. R. REID. (28s. net. Longmans.)

Dr. Rachel Reid has, in this learned dissertation on the Council of the North, produced one of the most important contributions to the study of English Constitutional History that have appeared during recent years. It is not unworthy to rank with Dr. C. A. J. Skeel's masterly work on the Council of Wales. Originally prepared as a thesis for the doctorate of London University, it has been enlarged and rewritten until, after a lapse of ten years, it now is presented as a mature and well rounded volume of over 500 pages. Its subject is sharply and conveniently circumscribed by the dates 1484-1641; the history of the Council lies between its inauguration under Richard III and its abolition by the Long Parliament. The popular view of the Council, which regards it as an irresponsible instrument of royal tyranny, is largely due to the uses to which it was put by Charles I and Wentworth, and to the attacks made upon it by the Parliamentary lawyers. Dr. Reid succeeds in completely vindicating its reputation—at any

rate, during the Tudor period. She shows it to have been a strong and righteous authority, invaluable for the suppression of wickedness and violence, and for the protection of weakness and virtue. Few more remarkable and interesting "revisions of history" have been made in the last decade.

The Story of England. By M. O. DAVIS. (4s. 6d. net. Clarendon Press.)

Miss Davis has written an attractive elementary history of England. The narrative is clear, the illustrations numerous and novel; the printing, paper, and binding all of the usual high quality of the Clarendon Press. A pupil who is taken through this book during the course of a year's lessons will by the end of the period have laid a sound foundation for subsequent study.

RELIGIOUS KNOWLEDGE.

The Friend of Little Children. By the Rev. J. SINCLAIR STEVENSON. (21s. net. Blackwell.)

This sumptuous volume, which is profusely and beautifully illustrated both with coloured pictures and engravings, admirably produced, gives in simple colloquial English the story of the Gospels. It is divided into ten parts. The volume would form an excellent prize-book for a young child, and would be of service also to those who have infant classes to teach. The type, printing, and illustrations are excellent.

An Encyclopædia of Religions. By M. A. CANNEY. (25s. net. Routledge.)

Prof. Canney's one-volume "Encyclopædia of Religions" is a veritable *tour de force*. In the space of nearly 400 double-column pages he, single-handed, has managed to survey practically all the salient facts and aspects of his subject. Thus, the reader who desires to find some information about any matter connected with the study of comparative religion will not consult Prof. Canney's pages in vain. To select but a few of the topics, we find articles on such important subjects as "Monism," "Monolatry," "Muhamadanism," "Sacraments," side by side with "Muggletonians," "Mithraism," "Hindu, Egyptian, Assyrian, Zend, and other terms. One rarely finds gaps, but some occur (e.g. "Judaism," "Testimonia" seem to be absent). The articles are brief and to the point, and provide valuable references to the important authorities dealing with the subject. In some cases (e.g. "Virgin-Birth") these references are too meagre, and might well be supplemented. The work, as a whole, is exceedingly useful, and will be found of constant service by students who desire to handle a convenient book of reference.

Studies in Christian Philosophy. By the Rev. Prof. W. R. MATTHEWS. (12s. net. Macmillan.)

Prof. Matthews's Boyle Lectures, contained in this volume, are quite admirable. They are a shining example of how philosophical questions should be handled. The author is the master of a graceful style, and expounds his themes with a lucidity and forcefulness which make the book a delight to read. He is, moreover, an adept in modern philosophical studies, and in every way thoroughly well equipped for his task. The subjects with which he deals are of fascinating interest: Is there a Christian Philosophy? the Christian view of the World; Ethical Theism as a "live option"; the Moral Argument for Theism; Divine Personality; the Idea of Creation. The statement and discussion of the problems involved in every case are remarkably able, but perhaps the most valuable are embodied in Lectures IV and VI. The former of these is a masterly presentation of the moral argument for Theism. This could hardly be bettered. The author shows that morality is essentially irrational on any other hypothesis than that of Theism. There is much, too, that is valuable in Lecture VI ("The Idea of Creation"), where the whole discussion is illuminating. We believe this is Mr. Matthews's first book. It is a real and timely contribution, and will at once establish the reputation of its author as a philosophic theologian who has something really important to say. In his opening lecture, Mr. Matthews says: "No more dangerous and insidious attack can be imagined than the suggestion, widespread and supported by men of deserved reputation, that the fundamental Christian affirmations are incompatible with modern knowledge—that the human mind has transcended them and left them behind." The present volume is a sufficient refutation of this idea. The author rightly claims that "there is a world view implicit in all religions, and Christianity, as a specific form of religion, has a definite philosophy of its own." He adds: "When we are dealing with historical or scientific criticism, we may be content to leave many questions open and undecided as not touching the core of our faith, but, when we are confronted with philosophical results claiming to be certain and contradicting the view which is involved in Christianity, we are called upon to defend the central citadel. In the long run we must find some answer or perish."

Mr. JOHN MURRAY,

Disguises of Love. By W. Stekel. Authorized Translation by R. Gabler. Kegan Paul. 6s. 6d. net.

The Cambridge University Press have just issued their complete general catalogue for 1922. It can be obtained by any teacher on application.

Messrs. W. & G. Foyle, Ltd., of 121-5 Charing Cross Road, have sent us their Catalogue (No. 2, 1921) of Classified Educational Books. Messrs. Foyle state that books can be obtained from them at about half the published price, plus postage.

We have received from Messrs. Benn Bros. their advance spring list of technical, art, and general books. It is post free on application.

PRIZE COMPETITIONS.

THE winner of the December competition was Mr. H. E. G. Evans, St. Mary's House, Tenby.

The puzzles set for the January competition were not popular; we suppose they were a little more difficult than appeared to one who knew the answers. Only two sets of answers were received, and, although each contained some good attempts, we do not feel justified in awarding a prize. A key is appended.

1. Complete the following jests and repartees:—

- (a) "And, doctor, do you really think
That asses' milk I ought to drink?
It cured yourself, I grant, 'tis true,
But then 'twas mother's milk to you."

(b) The "Saye and Sele Arms," near Banbury, bears the family motto, "Fortem posce animum." A wag once translated this: "Ask for strong spirits."

(c) Napoleon once said to a witty Italian lady: "Gli Italiani tutti ladroni." She replied: "Non tutti, ma buona parte."

(d) Lady Manners, who had recently acquired her title, remarked, satirically, to Margaret, the daughter of Sir Thomas More: "Honores mutant mores." Margaret replied: "That goes better in English, Madam: honours change manners."

(e) Archie, Charles I's Court Jester, had an antipathy to Archbishop Laud. Being asked to say grace when the latter was dining with the King, he delivered himself as follows:—"Great praise be given to God and little Laud to the devil."

2. Complete the following quotations and name the author:—

(a) There is nothing contrived by man by which so much happiness has been produced as by a good tavern.—(Johnson.)

(b) And the devil did grin, for his favourite sin
Is the pride that apes humility.—(Coleridge.)

(c) Remembrance* is the only Paradise out of which we cannot be driven.—(Richter.)

(d) In that high place he had so borne himself that all had feared him, that most loved him, and that envy herself could deny him no title to glory, except virtue.—(Macaulay, on Warren Hastings.)

(e) It doesn't matter what children learn at school, as long as they don't like it.—(F. P. Dunne.)

[This is really a translation from "Mr. Dooley's Philosophy," the original being: "I don't care what ye larn thim so long as 'tis onpleasant to thim."]

(f) Rumour is like bees; the more you fight them, the more you don't get rid of them.—(H. W. Shaw.)

(g) The offender never pardons.—(Herbert.)

(h) Knowledge is so proud that he has learned so much;
Wisdom is humble that he knows no more.—(Cowper.)

3. "Le 26 février. Le Corse est parti de l'île d'Elbe."

"Le 28 février. Bonaparte est débarqué à Cannes."

"Le 4 mars. Le général Bonaparte s'est emparé de Grenoble."

"Le 11 mars. Napoléon a fait son entrée à Lyon."

"Hier, l'Empereur a été reçu à Fontainebleau, au milieu des acclamations."

THE ANNUAL

Directory of Educational Associations

which has been described as ONE OF THE MOST USEFUL RETURNS
PUBLISHED BY ANY BRITISH EDUCATIONAL JOURNAL will appear
in the March, 1922, issue of THE JOURNAL OF EDUCATION AND
SCHOOL WORLD—"a paper indispensable to all school and college
reading-rooms in these islands."—The Westminster Gazette.

This "DIRECTORY" has been corrected to date by responsible officials.
It gives (a) number of members; (b) amount of annual subscription; (c) name
of "organ"; (d) telegraphic address; (e) telephone number; (f) date and place
of next annual meeting; (g) secretary's name and office address.

London: Mr. WILLIAM RICE, 3 Ludgate Broadway, E.C.4.

PITMAN'S NEW EDUCATOR'S LIBRARY

Each
2/6
NET.

The *New Educator's Library* presents in a convenient form that is likely to appeal to many specialist teachers whose interest lies in a select few of the aspects of Education much of the subject matter of *The Encyclopaedia and Dictionary of Education*: in fact, the scheme is due in great measure to the suggestions of many readers of the latter work, pointing out the desirability of issuing in sectional form the authoritative contributions on the various subjects.

These little books, embodying, as they do, the results of research and experience of educationists and others of high distinction in their subjects, will serve a really useful purpose to teachers, to students, and to many others connected with or interested in educational matters.

4. What are the six best biographies in the English language (Boswell excluded)? A question, strictly speaking, impossible to answer, for much depends on taste, and probably no two lovers of biography would agree. Nevertheless, it is interesting to attempt a list. The Prize Editor, distrustful of his own idiosyncrasies, took counsel with others, and, as a result, names three without hesitation: Lockhart's "Scott," Trevelyan's "Macaulay," and Froude's "Carlyle." The other three must be chosen, he thinks, from amongst Southey's "Cowper," Mrs. Gaskell's "Charlotte Brontë," Cook's "Florence Nightingale," Henderson's "Stonewall Jackson," Southey's "Wesley," Bosworth Smith's "Lawrence." Without attempting to dogmatize, he would vote for the first three. Carlyle's "Sterling" is a vivid and charming sketch, but it does not pretend to be a complete biography; some sides of Sterling's character are not fully portrayed. Such works as Carlyle's "Frederick" and Masson's "Milton" are scarcely biography in the strict sense of the term. Forster's "Goldsmith" is a solid piece of work, but the style is unattractive.

A Prize of Two Guineas is offered for the best translation of the following extract from Balzac's "Le Chef-d'œuvre inconnu":—

La mission de l'art n'est pas de copier la nature, mais de l'exprimer, s'écria vivement le vieillard. . . . La Forme est un Protée bien plus insaisissable et plus fertile en replis que le Protée de la fable, ce n'est pas après de longs combats qu'on peut la contraindre à se montrer sous son véritable aspect; vous autres! vous vous contentez de la première apparence qu'elle vous livre, ou tout au plus de la seconde, ou de la troisième; ce n'est pas ainsi qu'agissent les victorieux lutteurs! Ces peintres invincibles ne se laissent pas tromper à tous ces faux-fuyants, ils persévèrent jusqu'à ce que la nature en soit réduite à se montrer toute nue et dans son véritable esprit. Ainsi a procédé Raphaël, sa grande supériorité vient du sens intime qui, chez lui, semble vouloir briser la Forme. La Forme est, dans ses figures, ce qu'elle est chez nous, un truchement pour communiquer des idées, des sensations, une vaste poésie. Toute figure est un monde, un portrait dont le modèle est apparu dans une vision sublime, teint de lumière, désigné par une voix intérieure, dépouillé par un doigt céleste qui a montré, dans le

passé de toute une vie, les sources de l'expression. Vous faites à vos femmes de belles robes de chair, de belles draperies de cheveux, mais où est le sang qui engendre le calme ou la passion et cause des effets particuliers. . . . Parce que vous avez fait quelque chose qui ressemble plus à une femme qu'à une maison, vous pensez avoir touché le but. Ha! ha! vous n'y êtes pas encore, mes braves compagnons, il vous faudra user bien des crayons, couvrir bien des toiles avant d'arriver. Assurément, une femme porte sa tête de cette manière, elle tient sa jupe ainsi, ses yeux s'alanguissent et se fondent avec l'air de douceur résignée, l'ombre palpitante des cils flotte ainsi sur les joues! C'est cela, et ce n'est pas cela. Qu'y manque-t-il? un rien, mais ce rien est tout. Vous avez l'apparence de la vie, mais vous n'exprimez pas son trop plein qui déborde, ce je ne sais quoi qui est l'âme peut-être et qui flotte nuageusement sur l'enveloppe; enfin cette fleur de vie que Titien et Raphaël ont surprise.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on February 14, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

In memory of the late Sophie G. L. Adams, and as a tribute of admiration and gratitude for the work she did for the pupils of the Macclesfield High School, it has been decided to try to raise a fund for a scholarship for students going on to a university, to be called the Sophie Adams Scholarship. Donations may be sent to the Treasurer at Ravenswood, Park Lane, Macclesfield.

Interviews invited.

CONVEYANCING DEPARTMENT.

This Department is under the direction of **Mr. F. C. NEEDES, B.A.**, whose experience, advice, and assistance are unreservedly placed at the disposal of **Purchasers** free of charge.

TRANSFERS and PARTNERSHIPS arranged by correspondence or interview.

INSPECTIONS and VALUATIONS undertaken. **FOR SALE** (*inter alia*).

1. **Surrey.**—In a good-class residential and open locality, a flourishing **Dual School** for sale. Vendor retiring. There are 2 weekly Boarders, and nearly 100 Day Pupils, of whom about 40 are little boys. About 30 of the pupils take Music, and 8 take Art. Receipts £931, not counting the Boarders' Fees or the lunch payments. Very fine premises standing in a commanding position, and in their own grounds. Freehold, 3,000 guineas. Mortgage arranged. Or another large house and grounds, most suitable for a School and near by can be had for £2,000. Goodwill and all School Furniture, &c., only £501. School and locality well known to **Mr. Needes, who can unreservedly recommend this.**
2. **East Coast.**—**Flourishing Girls' Boarding and Day School.** Established by the present Principals over 14 years ago. There are about 13 Boarders and 42 Day Pupils, and the receipts for 1920 were nearly £1,600. Good premises with every accommodation. Rent £100. Vendors, who are going abroad, will accept £50 for Goodwill or close offer, and sell the furniture at valuation.
3. **Yorks: Seaside.**—Old-established flourishing **Girls' School.** 28 Boarders and 45 Day Girls. Receipts last 12 months nearly £1,750. Fine mansion situate in its own grounds, at the low rental of £70 per annum. Goodwill, one term's Capitation Fees, and School Furniture, &c., at valuation. Would suit two ladies.
4. **To Ladies with Capital.**—Ladies possessed of good personality and organizing powers, can bear of a sound investment in one of the best and most flourishing **Girls' Schools** in England. The profits range between £6,000 and £8,000 per annum. A lady with £5,000 cash can secure the Goodwill and all the Furniture (valued at about £10,000), and pay the balance of purchase money by instalments. The Vendors are very old clients of Mr. Needes who will be pleased to give full details.

For particulars of other Departments apply to the Secretary.

Nearest Stations: South Kensington and Gloucester Road.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., O.M., D.C.L., LL.D., &c.

Rector: The Right Hon. DAVID LLOYD GEORGE, O.M., Prime Minister.

Principal and Vice-Chancellor: Sir J. ALFRED EWING, K.C.B., M.A., D.Sc., LL.D., F.R.S.

Secretary to the University: WILLIAM WILSON, M.A., LL.B., Advocate.

The **Summer Term** extends from about the middle of April to the end of June; in Law, from May to July.

The **Autumn** and **Spring Terms** open about the beginning of October and close about the middle of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Degree of M.A.** (Honours and Ordinary), the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the combination of Arts, Science, Medical, Law, or Special Studies; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., D.Sc., and Ph.D. are conferred. The Degree of **Bachelor of Education** is conferred on candidates who have attended Courses and passed Examinations in Psychology and in Education (Theoretical and Practical). A Diploma in Education is also conferred. A Degree of **Bachelor of Commerce** (B.Com.) has been recently instituted, and Special Courses in Industrial Law and other kindred subjects are being provided. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. Temporary Regulations have been framed for a **Diploma** and a **Certificate in Forestry** for the behoof of Officers and men who have served in the War. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There are also **Diplomas in Public Health** (D.P.H.) and in **Psychiatry** (Dipl. Psych.). In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 51 Professors, over 130 Lecturers, and about 70 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £21,485. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in all the Faculties, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the **DEANS OF THE FACULTIES**, or from the **SECRETARY OF THE UNIVERSITY**; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 6s. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary, 1s.; Arts Bursaries, 6d.; Medical Preliminary, 6d.; Degree papers: Arts, 1s.; Science, 1s.; Divinity, Law, Medicine, and Music, 6d. each.

1922.

By order of the Senatus,

WILLIAM WILSON, *Secretary to the University.*

THE VACATION CONFERENCES.

THE EDUCATIONAL TRIPOD.

THE organizers of the recent Conference of Educational Associations in London were happy in their inspiration to set apart three public meetings to the discussion of education from as many different aspects. Some speakers at the various meetings seemed to feel called upon to defend the claims of the particular aspect they were discussing at the moment: but obviously there is no conflict among the points of view that regard education as a mission, as a science, as an art. It can be, and in fact is, all three. Everything depends on the aspect that is most prominent at a given meeting.

Naturally and properly, the mission came first; certainly it could not have fallen into better hands. The key-note of Principal Jacks's address was the claim so ingeniously made for Dominion status for education—home rule, freedom from political interference. The point was admirably made, and proved very convincing; but the speaker showed less than his accustomed dialectical skill in citing Plato as a friendly witness. No doubt those philosopher kings have an almost irresistible attraction for the educational theorist, but their aid is dearly bought when the reference incites opponents in their turn to subpoena the great academic on their own side. Against Principal Jacks's appeal to the "Laws" his adversaries might refer to "The Statesman" and the "Euthydemus," from which Prof. John Burnet infers "that the art of education will be subordinate to that of politics, and that the educator must take his orders from the statesman as to the sort of character to be produced in the souls of the citizens." No doubt Principal Jacks could make some clever play for the defence by challenging the identity of the statesman with the politician, and to one so thoroughly on his side as I am the play would be very attractive; but, after all, it cannot be denied that, so far as Plato's views are concerned, politics is architectonic to education, which is precisely what the missionary for education does not see his way to admit.

But, even if the educator must take his orders from the statesman, this subordination applies only to the nature of what is to be produced—"the sort of character to be produced in the souls of the citizens." The mode of producing that character must be left to the educator himself. Here he is an expert in his own domain, and takes orders from nobody. Is there, then, a science of education? This question Dr. Maxwell Garnett did not quite face; he rather took it for granted that the scientific standing of education was recognized—which is not a very unreasonable attitude for a man to take who has produced such a monumental work on the scientific side of education. He might well ask: If education is not a science, what do you call all this material that I have worked up? Besides, the very form in which the programme was drawn up warranted the speaker in assuming what some at least of his audience would have liked to see demonstrated. What troubled many of the hearers, following Dr. Strong, was the nature of the central direct interest that the speaker demanded. Could it be obtained in schools with their present wide range of subjects, or was it to be looked for in the future vocational interests of the pupils? Dr. Maxwell Garnett will no doubt on a future occasion return to this important point. One of his critics pointed out that it was difficult to separate the two personalities of the lecturer—the Principal of an important technological college and the Secretary of the League of Nations Union—but the point could be met by simply asking, in reply, why the two should be separated at all. Science can surely be applied to life, so Dr. Maxwell Garnett was entitled to make his point by asking: "What if education is so unlike engineering that scientific thinking does not help it? What if education is only an art?" We must have a reasonable foundation on which to build our educational organization, so that we naturally look to the scientific group of our educationists for guidance. Principal Jacks has provided us with stimulus, and has shown us the spirit in which we must work. Dr. Maxwell Garnett indicates at least one

possible scientific basis on which to build. When we come to the third leg of the tripod we are faced by a curious, but natural, confusion between two different, but not necessarily contrary, points of view.

Canon Masterman made the point that, as the nineteenth century was mainly given up to the scientific spirit, and the resulting pursuit of truth as such, so the twentieth century may possibly devote itself to the pursuit of beauty, which he described as the ultimate ideal of education. Though Mr. Clegg afterwards challenged this necessary connexion between art and beauty, the general impression of the plain man is that art and beauty are more or less inseparable. Miss Douglas's paper ran certainly on these lines. Indeed, the whole three papers at this meeting agreed in a practical identification of art with the *fine arts*. It was not made sufficiently clear that the mere practice of education could itself be treated as a fine art. Mr. Clegg approached this view when he spoke of Mr. Bernard Shaw's devastating epigram—"He who can, does; he who cannot, teaches"—and Canon Masterman hinted at it while laying emphasis on the two qualities of all true education—magnanimity and magnificence. But there is an aspect of fine art which ought to have had more prominence: the power of doing swiftly and unerringly whatever has to be done in the application of an art. This quality can be best understood by contrast with its opposite, which is *fumbling*. The teacher, as an artist in his craft, knows exactly what to do in whatever circumstances may arise, and does it without hesitation. He owes this power only partly to training, and therefore to science; but his innate power produces its highest results only when it obtains the guidance that science can give. Skill in our craft needs knowledge, but it also demands sympathetic practice. Art is as essential to the teaching craft as is science. Our profession stands securely only when it can depend on all three legs of the tripod—on moral inspiration, on scientific knowledge, and on artistic perception and appreciation.

J. A.

INTELLIGENCE TESTS.

By T. G. TIBBEY.

ALTHOUGH Dr. Rusk would find their origin among the ancients and credit Plato with a recognition of their need, in our present acceptance of the term intelligence tests are yet in their teens. Hence the contrasted attitudes of enthusiasm and criticism with which they were received at the Conference, for, whilst audiences were large whenever the subject was announced, the critical attitude of some speakers found ready support. Thus, Prof. Pear, in an interesting paper read before the British Psychological Society, brought to the focus of attention certain criticisms, of which mental tests had for some time past been the target, though, as Dr. Ballard pointed out in opening the discussion, he did not make sufficiently clear the distinction between individual tests, to which but few of his points applied, and group tests, the fallibility of which in individual cases is recognized. Granted this, however, there was justification for his suggestion that the attempt to create by the tests a situation which should be a miniature of one in real life often failed by neglect of the conative and emotional significance of certain elements that would be present in the actual situation, and also that the possibility of the solution of the same test by such different mental processes as visual imagination, motor memory, or reason, was often overlooked, recognition of the process involved being essential to a due appreciation of the significance of the results. The problem as to whether or not a time limit should be imposed has its significance here also. Indeed, the tests too often failed to take account of the subtler differences of mind, and depended too greatly upon power of rapid adjustment to a situation than which there were other factors in life more vital. As important also as the attitude of the subject was that of the tester, and Jung's differentiation of the introvert and the extrovert threw much light here. Finally, tests measure cognitive ability and not the ability to appre-

ciate the emotional aspect of the situation, and it was probable that much so-called stupidity was emotional rather than intellectual in origin.

Dr. Rusk before the Child Study Society was more hopeful; he, primarily concerned with the detection and efficient education of the super-normal child, urged the necessity of early application of tests of this character, with the view of such detection at the beginning of the child's career, and their repetition towards the middle and the end of the school period. He raised no question as to the ability of teachers to apply these tests, and indeed urged that the detection of inferior and superior ability should be specifically among their duties, giving instances from his own experience where such tests had served to reveal exceptional ability. Prof. Adams, treating the subject in the second of the four lectures he delivered for the College of Preceptors, was more judicial in his attitude. He urged that, whilst teachers were entitled to use them for practical guidance, the expectations that were at first aroused had hardly been justified, and pointed out that some psychologists were sceptical of the power of teachers to apply mental tests successfully. Yet as against this he quoted the success of Miss E. M. Hughes, in their application to her school of three hundred girls, who found that the results correlated highly with those of examination tests, but not so with the estimates of the school staff. Here, again, it was not made clear that, whilst this example had reference to group tests, the psychologists' doubt concerned the individual method. But whilst Prof. Adams advised teachers not to concern themselves with the detection of defective and super-intelligent children, he suggested that the tests would be valuable in aiding the promotion of normal children.

Obviously it was this practical aspect which had been the concern of the London Head Teachers' Association, the president of which, in his capacity of chairman of its research committee, conjoined with Mr. D. J. Collar to present a report of the results of the application of a series of three tests in eight London schools. The former pointed out that their purpose was specific, not to find out what intelligence was, but who had it, and to what degree; to discover the reactions of their pupils to certain elements in a somewhat elastic curriculum that they might be able through the knowledge so obtained to adapt their school work more effectively to their needs. It should be possible also for teachers to test the conclusions of the experts under normal school conditions. Individual tests were not suitable, because they took much time and needed the expert for their application. Resort had to be made to group tests, and here the factor insisted upon, as too often overlooked, was the need of careful regard of procedure and caution in drawing conclusions. This note of caution was emphasized by Mr. D. J. Collar. He had investigated by statistical methods the reliability of the three tests used—numerical, analogies, and absurdities—and had found it high; he had also deduced norms of performance for the ages nine to thirteen years, which would give some indication of the standing of individual pupils in relation to others. Yet he urged caution in the application of such results to the determination of an intelligence quotient for individual children, since the increase of score with increasing age could not be dissociated from the moral and material effects of education; though primarily tests of intelligence, like all others they were to some extent tests of attainment.

MUSIC.

AT the recent conference of educational associations, held at University College, the question of musical education in schools was again widely discussed. We are seeing "a musical renaissance breaking over the country," said Colonel Somerville, in his lecture on "The Military Band and its Influence on Public Taste." Our leading institutions, such as the Royal Academy of Music, the Royal College of Music, and the Guildhall School of Music, are full to overflowing with students clamouring for musical education. "Many musicians wondered why they were not admitted into the edu-

cational council of the nation," said Mr. M'Leod, of Edinburgh, in his address, "The Musician in the School." "He had failed in the past to show that music was as essential to the life of the people as other subjects." The necessary qualifications of a music teacher were dealt with by the Principal of Armstrong College in his address to the Incorporated Society of Musicians. He said: "They demanded of music teachers evidence of a good general education, evidence of proficiency in music, and evidence of capacity to teach music." His plea for "the expert advice of a council authorized to speak for the profession" should not be allowed to fall on deaf ears.

Mr. Frank Roscoe, Secretary to the Teachers Registration Council, emphasized the importance of recognizing music as a qualifying subject in examinations, as otherwise it was bound to be neglected when the other subjects were being pressed. While the condemnation of bad pianos was urged by one speaker, the claims of mechanical "music makers," such as the pianola, and more especially the gramophone, found staunch champions in such well known authorities as Dr. Walford Davies and Mr. Armstrong Gibbs. As a correspondent to the *Times* recently pointed out, there are still people who regard the gramophone as a nuisance rather than a musical instrument. But this is mere prejudice; such people can never have heard a fine gramophone or a really good record, and there are plenty of both. There are many teachers who will distinctly disagree with Dr. Walford Davies's remark: "Don't teach the children to read music—let them catch it, like they catch the mumps or the measles." "Music," said Dr. Davies, "involves three things dear to English people: energy, skill, and discipline." Is not Dr. Walford Davies rather inclined to lay undue stress on the former virtue only? Stock the child's mind with good and jolly tunes, folk songs, chorus songs, part songs, and let him hear as much good music as you like—the real teacher will know how judiciously to combine example and precept—and the child will be none the worse for knowing something about "how it is done." It almost seems necessary to remind Dr. Walford Davies that children sometimes grow up, and that there are such things as orchestras and choral societies to be kept going; and, although the uneducated person can doubtless find a good deal of interest and relaxation in the pursuit of music, with nothing more than his ear to guide him, yet we venture to think that the elements, properly taught, have as real an educational value as any other subject, and, unlike a good many that crowd the school curriculum, remain with the child as a permanent possession.

INCORPORATED ASSOCIATION OF HEAD MASTERS.

THE Lord Mayor welcomed the Association in hospitable civic style, and the members of the Association present, to the number of nearly two hundred, in their turn welcomed the new President, Mr. C. M. Stuart, of Catford, and listened to his discussion of some of the puzzles of present-day education: "Is payment to induce boys to stay at school justifiable?" "Should patriotism give place to internationalism?"

Passing from conundrums, the Association proceeded to debate two motions:

(1) That this meeting, while recognizing the need for economy in every department, is of opinion that the recently awakened public interest in education demands that no hindrance of any kind shall be placed in the way of educational progress.

(2) That the financial provisions of the Education Act of 1918 constitute a deplorable check upon every sort of educational development, and that there is urgent need for such a revision of the Act as will restore both to local education authorities and to the Board of Education the initiative of which both are now deprived.

The Burnham scales, of course, were mentioned in these and other resolutions. It was stated that, while head masters were little affected, in most cases, by the provisions of the agreement, speakers felt sure that the withdrawal of the scales would result in a dearth of assistant masters. The "Inchcape Rock" and the "Man with the axe" were incidentally treated as educational calamities. Both motions were passed.

A group of rather vague resolutions was accepted with very little opposition:

(1) That this Association, while welcoming the general conclusions of the Report, is strongly opposed to the recommendation that pupils should be transferred by compulsive action on the part of the central or local education authority from one secondary school to another, in order to obtain instruction in classics, believing that the disadvantages attending such transfer have been underrated in the Report, and that such a plan is against the best interests both of the schools and of classical learning generally.

(2) That this Association, having in mind the recommendations of the English, Modern Languages, and Science Reports, is of the opinion that—

(a) Candidates in the Entrance Scholarship Examination to Public Schools and in the Common Entrance Examination should not be encouraged to take Greek;

(b) Latin should not necessarily be a normal subject in the curriculum of all secondary schools;

(c) That Latin should not be a necessary subject in all arts courses of the universities.

(3) That this Association is of the opinion that the present distribution of scholarships between classics and other subjects at Oxford is unduly favourable to the former, and that the position should be remedied by increasing the number of scholarships available for subjects other than classics.

A delightful address by Sir Henry Newbolt on "Stimulus" intervened, after which the interest of the meeting centred on a resolution relating to "Advanced Courses." So close was the voting that a division had to be taken, resulting in a win for the proposer by 71 to 98.

That this Association cordially welcomes the observations contained in the Report on the Teaching of Classics in favour of greater freedom in advanced work in secondary schools, and desires to urge the Board of Education to recognize that the time has come for abolishing the present Advanced Course Regulations and encouraging the development of the greatest possible variety in secondary-school work of a really high standard.

The fight raged on the word "abolished," as against "modified." Both parties wished to remodel the system, which was said to have outlived its usefulness; neither wanted to do away with advanced study.

Mr. Hurlstone Jones's motion:

That, whatever method is adopted by any education authority for assessing the capacity of children to profit by secondary education, it is essential that neither the right of parents to apply for their children's admission to the schools that they may prefer, nor the right of the head master to accept or reject applicants in accordance with their qualifications, shall be infringed,

raised opposition or support according as members felt the pinch or not. Evidence showed that in certain areas the pinch was sharp and led finally to the adoption of the resolution.

A natural wish that education should be national rather than parochial was responsible for the following:—

That the attempts now being made in many parts of the country to restrict the use of educational facilities provided in any area to the inhabitants of that area is contrary to the general interest, and that local education authorities should be urged to take steps without delay to agree upon a policy of mutual accommodation.

Members carried the resolution in the interests of many parents, especially those of boarders, now sorely inconvenienced by present arrangements.

An *hors d'œuvre*, the address by Prof. Gilbert Murray, of the League of Nations Union, was listened to with extraordinary interest.

The concluding public motion, the duplicate of one passed at the Conference, was easily carried in the hopes that more weight would be attached to evidence of education:

That, in the opinion of this Association, it is desirable that professional bodies and business houses should have their attention drawn to the educational qualifications implied in the possession of a Higher School Certificate, and that they should be urged to take this certificate into account in making appointments and in granting exemption from qualifying examinations.

ASSOCIATION OF ASSISTANT MASTERS.

At the council meetings of the Incorporated Association of Assistant Masters considerable attention was devoted to the Report of the Departmental Committee on the Teaching of English. The Council expressed general approval of the conclusions and recommendations of the Report, so far as they apply to secondary education. But they went further than this in requesting their Executive Committee to arrange for the consideration of those recommendations in detail. A special committee is to be set up forthwith, whose terms of reference are to endeavour to reduce to system the various, and often ill-defined, methods of teaching English which at present obtain in English and Welsh secondary schools. The nucleus of the committee has already been appointed, and it is intended that its membership shall include not only teachers who make English their special subject, but also teachers of other subjects. The object of this is to secure not only that expert opinion on the specialist side shall find proper expression, but also that adequate help may be obtained in co-ordinating the teaching of English with that of other subjects. It is thus evident that the assistant masters have realized the far-reaching effects which will result from a proper application of the principles laid down in the Report, and that they are anxious to do their part in bringing about a real improvement in the teaching of English in this country.

The education policy of the Association is to be reprinted and circulated to members. This policy is already in harmony with the recommendations of the Committee on English, inasmuch as it states that every master should at all times insist on the writing of good English, and that, in the earlier stages, the aim should be the development of the power of self-expression and the appreciation of good literature.

The evil effect which proposals for cutting down expenditure on education will have on the work of the schools was seriously considered. Any retrenchment on necessary books or apparatus would gravely handicap children who have already suffered enough from difficulties in school life due to war conditions. The Council decided that national interests demand an increase rather than a decrease in expenditure, and pledged themselves to use every possible means of securing that the efficiency of the schools shall not be impaired through false economy. A resolution was also passed characterizing the raising of fees in aided and maintained schools as a retrograde step, and declaring that free secondary education should be provided for all children capable of profiting by it.

ASSOCIATION OF ASSISTANT MISTRESSES.

At the thirty-eighth general meeting of the Association of Assistant Mistresses, held on January 5, the desirability of any alteration in the requirements of the first school certificate was under discussion. A number of members of the Association are of the opinion that it should be possible to obtain a certificate if a satisfactory standard is reached in any three groups. They point out that a large percentage of girls leave at present without having obtained any certificate, finding insuperable difficulty in either French or mathematics or science, and that the possibility of substituting art or music would provide a combination of subjects of equal, if not higher, educational value for the type of girl concerned. The advocates of this policy are supported by the art mistresses, who feel that, while the subjects of the first three groups are obligatory and those of Group 4 optional, their subject will tend to be regarded as of secondary importance and will always be among those that are dropped when any pressure due to preparation for the examination is felt. They hint that the unwillingness to recognize the full educational value of art that they find among their colleagues may be traced to the fact that few of these know from their own school experience the possibilities of which the subject is capable. It is not supposed that languages and science would, in any circumstances, be dropped out of the curriculum; all are agreed that no education which does not include these can be regarded as secondary, but all are not agreed as to the necessity for passing an examination in them. On the other hand, it was pointed out that many professional bodies have at length consented to accept the school certificate as an entrance qualification on the understanding that it represents a certain standard of attainment, and that the introduction of alternative subjects will cause confusion and imperil the continued recognition of the certificate. Many mistresses find it impossible to believe that the average girl cannot reach, by the age of sixteen, the standard required for satisfying the examiners in a language or mathematics or science, and also feel that the proposed change would eventually result in the setting up of an alternative examination which would be regarded as a "girls'" examination. They object to any such differentiation between girls and boys, and point out that no such variation is apparently asked for as far as boys are concerned.

After much discussion on the lines indicated above, the meeting approved the continuance of the present policy of the Association, a resolution, "That Groups 1, 2, and 3 remain as essential parts of the First School Examination," being carried by a considerable majority. The meeting further agreed that no subject should be compulsory, although there was a considerable body of opinion in favour of an exception being made in the case of English.

THE MATHEMATICAL ASSOCIATION.

At the annual meeting of the Mathematical Association, held at the London Day Training College on Tuesday, January 3, Mr. A. Dakin, Head Master of Stretford Secondary School, opening a discussion on "The Teaching of Mechanics," advocated the teaching and development of pure and applied mathematics *pari passu* in boys' secondary schools. It was now generally accepted that no boy should leave school entirely ignorant of the application of mathematics; and mechanics was still that branch of applied mathematics most easily systematized and most readily incorporated into the general school course. Although there had been considerable improvement in the teaching of the subject during the past fifteen years, there were still schools which either neglected the subject entirely or postponed its teaching until after the First School Examination. This neglect was partly due to its difficulty. But the difficulty was counteracted by the interest that every boy brought to its study. It was essential that each school should have liberty to develop the subject in its own way, but, as an illustration of the possible method of development, Mr. Dakin outlined a scheme commencing at the age of twelve years and continuing for the normal four years' school course. The first year a course in weighing and measuring, finishing with simple applications of the principle of Archimedes, was taken. The next year a course, largely experimental and numerical, of statics, beginning with springs and levers and ending with the parallelogram of forces. Simultaneously proportion and easy numerical trigonometry were taught and continual cross-references were made between the pure and applied mathematics. During the third year dynamics was taught; in this subject fewer opportunities arise for experiment and more appeal is made to intuition. The main aim is to develop the idea that variation of motion, both in straight line motion and from straight line motion, must be explained in terms of force. In the fourth year gaps are filled in and the whole subject consolidated. The pupil who then proceeds to an advanced course is in a position to consider the important subject of dynamics of rotation during the first term of that course. The advantages of such a course are that reality is given to the whole mathematical teaching; natural and directly useful examples are introduced into the algebra and trigonometry; the dynamics teaching supplies a stock of ideas which make a natural introduction to the calculus. In addition, such a course provides an excellent link between the mathematics and science teachers of a school and so ensures real co-operation and true correlation between these subjects.

Mr. Dakin, speaking of the teaching of mechanics to girls, said that in his opinion the ordinary scheme, as arranged for boys, failed to make the same appeal to girls as to boys, and consequently its teaching was not attended with the same profitable results. There was, however, in every girls' school a small minority who had special aptitude for mathematics. From this minority come the future teachers of mathematics to girls, and it is important that opportunities should be provided, both during their school and their college careers, for these to acquire a knowledge of applied as well as pure mathematics.

Miss F. A. Yeldham gave an account of the application of the Dalton Plan to the teaching of mathematics in Streatham County Secondary School for Girls. The plan had now been in operation for four terms, and the mistresses were of opinion that it had on the whole produced better results than the old method. Girls were given the choice of three grades of assignments, and generally selected that grade best suited to their abilities. The checking of the assignments in mathematics tended to become too much the mere checking of correct answers, and Miss Yeldham would welcome any method by which principles acquired could be ascertained. She outlined a month's assignment in applied mathematics for a fourth form. The assignment dealt with the lever and its simple applications, and, in this case, it was easy to test orally whether the principle had been understood.

SCIENCE MASTERS' ASSOCIATION.

At a general meeting of the Science Masters' Association, held recently at the Imperial College of Science, the Master of Balliol, who presided, addressed a large gathering of members on "The Relationship of History and Science." History, he said, had

passed from the romantic to the scientific stage: modern historians were doing in one sphere what scientists were doing in another; generalizing from observed facts and attempting to predict new ones. That they were the less successful in doing this he explained as being due to the fact that science rests on uniformity, whereas the basis of history is human nature with its bewildering diversity of manifestations. But in the teaching of either subject the same fault, bookish education, was to be avoided; for their pupils loved the actual doing of things, and were too often dulled by didactic instruction.

The relationship of science and geography formed another subject of discussion, during the course of which Sir Richard Gregory aptly defined their spheres. Science, he said, was concerned with physical causes and effects: geography began when these effects were considered with regard to their bearing on the activities of man within his environment. So far as one could gather from a debate during which no vote was taken, science masters, generally, approve of the important position allotted to modern geography in school teaching, not only from the intrinsic value of the subject, but also because of its intimate relationship with science.

There were discussions, also, on the teaching of physical chemistry and of dynamics. In the case of the former, the view was widely expressed that physico-chemical ideas should be introduced at a very early stage into the ordinary chemistry courses. With regard to dynamics, it can safely be said that no branch of science is taught in a less satisfactory manner. The usual treatment is not sufficiently experimental, and there is a straining after logical sequence which is quite unnecessary. Mr. H. W. Gregson told the meeting that at the Royal Naval College at Dartmouth, where these faults are avoided, they found little difficulty in giving cadets of about sixteen or seventeen years of age a good working knowledge of mechanics.

The Association is fortunate in having Sir Ernest Rutherford as its president for the coming year, during which Major V. S. Bryant (St. Piran's, Maidenhead) and Major C. E. Sladden (Eton College) will act as secretaries. The proceedings of the meeting will be fully reported in the forthcoming number of the *School Science Review*.

ASSOCIATION OF SCIENCE TEACHERS.

The annual meetings of the Association were held at University College, London, on January 3. At a business meeting in the morning reports were received from the London, Midland, North-West, and Welsh branches, all of which had arranged excellent lectures.

The following resolution was passed unanimously:—

That this meeting of the Association of Science Teachers deeply regrets the action of the University of Cambridge in that, alone among British universities, it continues to exclude women from membership. The Association believes that such exclusion must be prejudicial to the higher education of women in general, and especially in natural science, for the study of which Cambridge can offer exceptional advantages.

A very useful discussion on practical examinations in science, initiated by a resolution concerning general elementary science as a subject in the General School Examination of the University of London, was made much more valuable by the presence of Mr. Lea as a representative of the university. The general sense of the meeting was in favour of the retention, or even extension, of practical tests in science as a part of the First Examination.

In the afternoon Dr. Winifred Brechley, of Rothamsted Experimental Station, lectured on "The Effects of Competition on Plant Life." She pointed out that competition was prevalent both above and below ground. In the soil the deficiency of any constituent of plant food might act as a limiting factor in the growth of the plant, the elements most often deficient being nitrogen and phosphorus, and to a less extent potassium. Tests on this point were made by pot cultures where the composition of the soil could be controlled; by such tests it could be shown that, with scanty nourishment, one plant would increase as much in dry weight as would a number of plants crowded into the same amount of soil.

Above ground the limiting factor was light, leaf mosaics and other leaf arrangements being an adaptation to this condition. The effect of light was not always apparent, as crowded plants were taller than "spaced" ones, but a comparison of dry weights showed that the "spaced" plant had increased 50 per cent. more than the crowded one.

Plants were adapted to live in communities on a limited amount of soil by varying root-depth, e.g. during the drought of last summer Bird's-foot Trefoil flourished exceedingly because it had deep roots.

Cultivated plants could not exist at all under the competition of weeds. Recent work at Rothamsted had shown the extraordinary vitality of weed seeds, and work was now proceeding on a survey of weeds of various districts. In this Dr. Brencley sought to enlist the help of schools in various parts of the country. She will be glad to send details as to the data required to anyone who can help in this way.

MODERN LANGUAGE ASSOCIATION.

THE annual meeting of the Modern Language Association was held at Cambridge, from January 4 to 6. The attendance was rather disappointing, but it is to be hoped that the Council will nevertheless adhere to the pre-war plan of having the meeting in London and in a provincial town in alternate years. On the first evening the Vice-Chancellor gave a reception to the members of the Association in the hall of Corpus Christi College. Next morning at the general meeting a very satisfactory report on the last year's work was presented. In spite of the increased subscription the membership remains very satisfactory, and, in consequence, the financial position is quite sound. The report of the editor of *Modern Languages* was very favourably received. At noon Sir Sydney Russell-Wells, Vice-Chancellor of the University of London, delivered his presidential address, which proved to be an exceedingly interesting discussion of the differences between dead and living languages. He dwelt on the attitudes towards the development of language represented by Schleicher and Jespersen respectively, and compared English, as a progressive modern language, with Latin, which he maintained was not killed by the Reformation (as some have held) but by the Renaissance, which put a stop to its natural growth by its contempt for what was not Ciceronian. Purism and stylism he regarded as fatal to growth and progress. The address was listened to with great attention and felt to be exceptionally stimulating. In the afternoon there was a debate on Latin as a compulsory subject for arts degrees. The arguments against it were overwhelming, and by a very large majority a resolution was passed in support of Recommendation 10 of the Government Committee on Modern Languages ("that neither Latin nor Greek be compulsory for an arts degree in any of our universities"). After tea, provided at Gonville and Caius College by the hospitality of the Master and Fellows, Mr. Kirkman read a helpful paper on "Research in Modern Language Instruction"; and after dinner, at the same College, Mr. Nicholson delivered a very good lantern lecture on "Cambridge and its Colleges." On Friday there was a discussion on "The relations of school and university, with special reference to advanced courses and higher certificate work in schools," begun by two representatives of the universities and two of the schools. Kindly home truths were exchanged and much light was thrown on the difficulties of the teachers and professors, particularly as regards the teaching of literature. The proceedings concluded with a paper by Mr. D. Elfstrand, a well known teacher of English in Sweden, on "Translation into the mother tongue in modern language teaching," which was an eloquent defence of the direct method. The proceedings will be fully reported in *Modern Languages*.

HISTORICAL ASSOCIATION.

By the kind invitation of King's College, London, the annual meeting of the Historical Association was held there from January 4 to 7. A number of addresses were given during the meeting, and one of their features was that the greater part of them were concerned either directly with historical research and its objects or with matters related to it.

The annual address on the opening day was given by Viscount Bryce, who took as his subject "Historical Records," and dealt with brilliant rapidity with the work of historians from the time of Herodotus to our own day, indicating the development of historical method and the use of materials. Dr. Barker, on the evening of January 5, spoke on "Philosophy and History," basing his argument to a great extent on Benedetto Croce's famous book on the subject. In the course of a lucid exposition of Croce's theories, with which he seemed to identify his own views, stressed an interpretation of historical method depending for its justification on the variation of historical reality as well as historical presentation in accordance with the demands of each age: to the men of the Renaissance, the Middle Ages had one significance; to the Age of Enlightenment, another; to Chateaubriand, yet a third. The vital need in history was not the discovery and enumeration of unknown data, but the interpretation of the spirit of the past in the light of the workings of that same spirit in the present. Another, more material, aspect of historical study was represented by Prof. Toynbee, on the morning of January 6, in an address dealing with "Western

Travellers as Sources for Levantine History," in which the danger of neglecting unofficial for official sources was pressed upon students. On the afternoon of the same day Prof. Pollard, at the Institute of Historical Research, set forth the aims and methods of the Institute, stressing the advantages of co-operation in research and the economies effected by this means. The meeting was ended by an address by Miss Jeffries Davis, Reader in the History and Records of London, on "The Evolution of London"; and, although she did not speak mainly of materials for London history, she gave a practical demonstration of their use in a survey of London history in medieval and modern times.

Two events, to which reference has not yet been made, were, perhaps, of especial interest to teachers of history. On Friday morning Prof. Fleure, Hon. Secretary of the Geographical Association, addressing a joint meeting of the two associations, dealt with the interrelation of geography and history. He spoke of the effect of climatic conditions on political history, instancing the influence of the extreme cold of Russia on the difficulties of popular organization; he spoke of physical barriers, instancing the natural divisions of Silesia; he referred, in some detail, to the divisions of France, racial, linguistic, and physical. He showed that the true division was by zones and not by lines, and appealed to historians and politicians to evolve some system by which this truth could find practical recognition. Finally, he discussed the organization of a medieval city, and explained the influence of geographical factors.

Still more specialist in character was the discussion, on the morning of January 7, on "History Teaching as Propaganda." Some divergency of view was expressed, but, on the whole, the modified form of propaganda advocated by the opener, Mr. D. C. Somervell, of Tonbridge School, appeared to have the approval of the meeting, the principal dissentient being Professor Hearnshaw, of King's College, London. Mr. Somervell represented it as the duty of the teachers to present theories, as well as facts, to the pupils. Boys and girls were not competent to form judgments unaided, they must receive definite guidance from their teachers. The principles and beliefs of the teacher should be obvious to the pupils, the lessons of history should be explained from his point of view: it was essential that he should have a philosophy and be prepared to stand by it.

GEOGRAPHICAL ASSOCIATION.

THE Geographical Association held its annual meetings at Birkbeck College, on January 5 and 6. Lord Robert Cecil, as president, spoke on "Geography and Peace." If the Washington Conference was more efficient for peace than the League of Nations Council this was partly because the latter had serious geographic constitutional defects, such as the absence of German, Russian, and United States representatives. Self-determination was easy to enunciate, but most difficult to apply, because geographic conditions had resulted in extraordinary intermingling of peoples who, with inexplicable perversity, declined to live in watertight compartments. Racial and linguistic complexity is not, however, an impassable barrier to governmental unity, as Switzerland, with its three component peoples, differing in history, language, and religion, indubitably proves. The Silesian decision was full of geographic interest. For purposes of tariffs, passports, and transportation the political boundary is ignored, and this may be a first experiment towards serious future modification of our state system.

Mrs. Ormsby, London School of Economics, from long continued researches, gave a demonstration lecture showing remarkable connexions between original contours and drainage of London and Westminster and their present configuration. Her detailed contour maps are of great scientific interest and should be published. Sir Halford Mackinder, M.P., suggested that London originated as the port of St. Albans.

Mr. R. L. Thompson, Rugby School, pleading for the better teaching of both history and geography, emphasized the need for superseding the narrowness of the personal and local standpoints. We should envisage the weaving of the pattern of life linked through the ages by history and through space by geography.

Sir Halford Mackinder, M.P., spoke on problems of the Pacific. He asked for geographic imagination of the Pacific as a unity instead of the too prevalent view of it as a distant fringe of the European peoples. The Washington Conference had not laid down the limits of the Pacific, and this might be a serious omission since such populous and prosperous islands as Java lie in the doubtful zone. The Pacific coastal fringes must become incalculably important because of their coal, mineral, and agricultural possibilities.

Dr. Fleure, Hon. Secretary of the Association, lecturing to a joint meeting of historians and geographers, urged that subject barriers in education should be diminished and that historians

and geographers should co-operate to attain broader truth about human evolution. The long, bitter Russian winter so lowers human efficiency that continuously efficient popular criticism of government is impossible, and traditional routine is therefore important. In France the Roman South and the Paris Basin differ historically in language, law, architecture, and economics. The boundary between them is a zone, not a line. Our political system needs readjustment by recognition of the zonal character of frontiers. The maps of cities are full of clues for interpreting their life and, when compared, illustrate remarkably the medieval spread of civic development from the Paris basin along the European plain. Mapping of prehistoric facts is another geographic study which will help to trace back the lineage of human institutions beyond the age of documents.

Miss L. Winchester, Liverpool University, discussed climatic variations in Palestine and factors of the serious summer drought which make storage for water from the winter rains an outstanding problem.

Dr. Hogarth lectured, with many original slides, on Hedjaz as a central section of the age-long trade route between Syria and Yemen, with Mecca and Medina as stations on either side of an immense and high bluff of barren volcanic rock. The growth of Mohammedan life and pilgrimage on this basis was implicitly suggested, and its influence on the country was worked out to the practical conclusion that Hedjaz could hardly become a commanding political unit.

The outstanding features of the annual business meeting were the remarkable enthusiasm for geography shown by the fact that eleven hundred new members had joined the Association during 1921, and the resolution sent to the Board of Education urging that, while fully recognizing the valuable service which the system of advanced courses has rendered in raising the standard of secondary education, the Geographical Association feels that changed conditions emphasize "the need for much greater freedom of teaching and grouping of subjects."

EDUCATIONAL HANDWORK ASSOCIATION.

The meeting was held at University College on December 31, 1921.

Mr. B. S. Gott, Secretary to the Middlesex Education Committee, in his paper, "Secondary Education through Handwork," made a definite suggestion for a new type of secondary school. He said failures in secondary schools were due partly to the fact that the examinations and work were largely linguistic, and the provision of trade schools did not solve the problem. They needed secondary schools which should offer a good general education mainly through practical activities, for pupils who had no linguistic gifts and no special trend towards craftsmanship. The aim should be cultural rather than industrial; not to produce merely a skilled man, but a well educated man, who would sometimes pass on to the university. Power and insight would be given through an understanding of the fundamental processes of industry, without any attempt to create a finished product. The final result should be the same social culture, whether obtained by the medium of practical work or the present secondary-school curriculum. The teachers would need to be men and women of unusual ability, with a university outlook and skilled acquaintance with tool and craft; the main factor in the English teaching should be ability to make a clear and systematic statement of work done. The value of such a special type of school would be that it would help the discovery of special talent and latent inventive power, while it would enlarge the possible field of small industries.

Mr. R. N. Sharman, Assistant Editor of *Educational Handwork*, in his paper, "Some Notes on Classroom Handwork," dealt especially with aspects of the subject from the view-point of the actual teacher. Referring to the definitely mentioned possibility of economies in materials, he remarked upon the constant rarity of adequate supplies, and protested that less expenditure might even eliminate much practical work. The nation cried out for greater production, and yet here were proposals to restrict the only school subject with a possible outlet in productivity. Practical suggestions by teachers towards economy were modifications of the centre system, the sale of produce, the greater use of waste materials, and the continuance of exercises by additional educational labour. As a classroom subject, handwork could be simplified without loss of educational value, and newer developments in clay and powder work gave evidence of this. Training was more important than information, and in specialist teaching—not an unmixed blessing—teachers frequently found that handwork lost much of its vitality as a permeating influence of school life. The descendently important qualifications of a teacher of classroom handwork were: recognition of its educational values; "temperament"; experience in teaching it; and technical skill. Having all these, but lacking

the enthusiastic support of heads and inspectors, and a school policy accepting its values, no teacher could make a success of the subject.

THE EDUCATION GUILD.

The Education Guild held its annual meeting, as usual, in connexion with the Conference of Educational Associations. Lord Gorrell was unanimously elected president for the coming year.

The retiring president, Sir Wilmot Herringham, delivered a scholarly address on "University Education." This was followed by an address by Mr. Albert Mansbridge on "Vocational Education with special reference to the needs of Emigrants."

In the afternoon the question, "What is the good of present-day education?" was discussed. The first speaker, Mr. E. J. Sainsbury, of the Chelsea Central School, claimed that the present-day system of education was a very great improvement on that which existed twenty years ago, and that it had justified itself, in spite of the difficulties with which it had to contend, such as too large classes and the fact that children were not allowed to stay at schools sufficiently long. He claimed that the present-day school did try to form character by inculcating good habits.

Mr. G. D. H. Cole, who followed, declared that these "good habits" were virtues of a "slave state," and he wanted to see the virtues of rebels developed. He declared that he wanted teachers to make rebels against the existing state of the world, and, in order to make rebels, teachers must themselves become rebels. Mr. Cole emphasized the necessity for teachers to assume more responsibility in the running of the schools. He voiced the opinion of the majority of educationists when he declared that he wanted "the demand for self-government in the schools for the teachers with regard to teaching methods, freedom from inspection, freedom to organize promotion within the profession; a collegiate relation between the head masters and those associated with them."

Mr. H. A. Gerny, speaking from the point of view of a business man, said that unless the individual practised the virtues mentioned by Mr. Sainsbury, he would not be doing justice to the community in which he lived, and which, in turn, was serving him. "Given," said he, "congenial environment at home and in school, and patience during the wayward and impulsive periods . . . the boy or girl passing through any normal curriculum of a good school will be qualified to enter the field of commerce. It is the self-reliant person who is needed—one who thoroughly enjoys life because life is good, and because there is so much of interest in it."

THE FROEBEL SOCIETY AND JUNIOR SCHOOLS ASSOCIATION.

At the forty-seventh annual meeting of the Froebel Society, held on January 2, at University College, Miss A. Maude Royden, who had been elected president, spoke to a crowded audience on "Morality and Education." She asked teachers to have hope in grown men and women as they had in children, while at the same time to have a youthful spirit. She spoke of the deplorable danger of developing the brain faster than the spirit, and argued that at present humanity was developing more rapidly intellectually than spiritually. Quoting from Prof. Soddy and Sir Oliver Lodge, Miss Royden showed that perhaps it is better for the human race not to be able to make this life on earth a "Garden of Eden" until we possess morality enough to use the knowledge properly. As it is, our enormous power over the physical world is creating a situation fraught with most appalling dangers. The development of modern psychology, practically a new science, is proving the same dangers. We are daily gaining a knowledge of the human mind that can be put to uses as dangerous as our knowledge of the material world. Have we attained a morality sufficient to enable us to take so great a responsibility over the minds of other people? Miss Royden claimed a great reverence for knowledge, but argued that Truth, Beauty, and Goodness were three aspects of the same thing, and that thing God. To isolate one of these aspects, and to say that knowledge alone is the panacea of human ills, was using knowledge to destroy rather than to create. Knowing what is wrong does not supply a motive power for doing what is right. Knowledge is not in itself that motive power. Knowledge may be used only to do more wrong with greater security, to be more ruthless, to be a greater egoist. Knowledge is but the light that shows in which direction to go, but if you want to go in the wrong one you still can. But the tendency to over-estimate knowledge as in itself a driving force, is partly responsible for, and has partly been created by, the under-estimate which moral and religious teachers have laid on the necessity for knowledge. You get, on the one hand,

Cambridge University Press

RECENT PUBLICATIONS

Horace: Odes and Epodes. A study in poetic word-order. By H. DARNLEY NAYLOR, M.A., Trinity College, Cambridge, Hughes Professor of Classics in the University of Adelaide. Demy 8vo. 20s net.

This book is not a new commentary on part of Horace, but, as the title intimates, a study in poetic order, with illustrations from the *Odes*, *Carmen Saeculare*, and *Epodes*, and is intended to be used side by side with any edition of the poet. It is the author's aim to show that word-order is no more negligible in poetry than it is in prose, and that the rules laid down by Professor J. P. Postgate and exemplified by the author in certain Livian studies are observed by the poet no less than by the writer of prose.

A Manual of French. By H. J. CHAYTOR, M.A. Crown 8vo. 4s net. Cambridge Guides to Modern Languages.

The series of Modern Language Guides, of which this is the fourth volume, is intended for the use of readers with limited time and opportunities for study who wish to acquire such knowledge of a language as will enable them to read its literature. A reader who will work through the book, looking up references and identifying grammatical forms until he can readily recognise them, should be able to attack an ordinary text with the aid of a dictionary and with occasional reference to a grammar.

Annotated Renderings of 100 Passages selected from *A Manual of French Composition*. By R. L. G. RITCHIE and J. M. MOORE. Demy 8vo. 10s net.

"In this work Prof. Graeme Ritchie and Mr J. M. Moore supply renderings of about one-half of the passages given in their manual, together with excellent and stimulating notes. . . . Used in conjunction with the manual, this book should be an extremely valuable aid in the study and teaching of advanced French prose composition; it is, perhaps, the only English work of the kind fit for university use."—*The Journal of Education*.

A Junior French Reader. By R. L. G. RITCHIE, M.A., and J. M. MOORE, M.A. 4s 6d net.

"A literary reader for third or fourth year pupils. The passages are chosen with the care and skill which one would naturally expect from the authors, and are representative of all branches of French literature. . . . Good notes are given. . . . This is a capital work."—*The Scottish Educational Journal*.

De Vigny: Prose et Poésies. Edited, with introduction, exercises, and vocabulary, by A. WILSON-GREEN, M.A. Crown 8vo. 4s 6d net. Cambridge Modern French Series.

"An excellent addition to the Cambridge Modern French Series. De Vigny's clear cut style, his mode of thought, and his ethical preoccupations, make him an admirable choice for use in British schools. . . . Concise and very helpful notes, intelligent exercises, and a vocabulary add greatly to the usefulness of the book."—*The Scottish Educational Journal*.

North: Plutarch's Lives. A selection edited by P. GILES, Litt.D. F'cap 8vo. 3s 6d. English Literature for Schools.

"Dr Giles has produced a scholarly little book which should find a ready welcome among all students of English Literature. . . . The selection illustrates very clearly Plutarch's parallel method of treatment. The spelling and punctuation have been to some extent modernised, but the editor has preserved the original charm of the style of the English translator."—*The Educational Times*.

Lamb: Miscellaneous Essays. Edited by A. HAMILTON THOMPSON, M.A., F.S.A. F'cap 8vo. 6s net. Pitt Press Series.

"The selection of essays for this present volume has been admirably carried out."—*Education*.

Lamb: The Adventures of Ulysses. Edited by E. A. GARDNER, Litt.D. With 13 illustrations and a map. F'cap 8vo. 4s net.

"This is a delightful edition of a delightful little work."—*Notes and Queries*.

Principles of Geometry. Vol I Foundations.

By H. F. BAKER, Sc.D., F.R.S. Demy 8vo. 12s net.

The volumes of which this is the first have the purpose of introducing the reader to those parts of geometry which precede the theory of higher plane curves and of irrational surfaces. The present volume is devoted to the indispensable logical preliminaries. It assumes only those relations of position, for points, lines, and planes, which, furnished with a pencil, a ruler, some rods, and some string, a student may learn by drawing diagrams and making models. It seeks to set these relations in an ordered framework of deduction, gradually rendered comprehensive and precise enough to include all the subsequent theory.

Multilinear Functions of Direction and their uses in differential geometry. By ERIC HAROLD NEVILLE, late Fellow of Trinity College, Cambridge, Professor of Mathematics in University College, Reading. Demy 8vo. 8s 6d net.

The distinctive feature of this work is that the functions discussed are primarily not functions of a single variable direction, but functions of several independent directions. Functions of a single direction emerge when the directions originally independent become related, and a large number of elementary theorems of differential geometry express in different terms a few properties of a few simple functions.

Fungi. Ascomycetes, Ustilaginales, Uredinales. By HELEN GWYNNE-VAUGHAN, D.B.E., LL.D., D.Sc., F.L.S. With a frontispiece and 196 text-figures. Royal 8vo. 35s net.

The author's intention in this book is to present the fungus as a living individual: the scope is mainly morphological, but, in dealing with objects so minute, morphology passes insensibly into cytology. The introduction deals with fungi in general; the special part of this volume is limited to the consideration of the Ascomycetes, Ustilaginales, and Uredinales.

Inorganic Chemistry. By E. I. LEWIS, M.A., B.Sc. With an introductory note by Sir RICHARD THRELFALL, K.B.E., F.R.S. Third, revised and enlarged, edition. Demy 8vo. 10s net.

"This book deserves the widest recommendation as a sound and interesting introduction to the subject. . . . It deserves a high place, not only in the school, but generally as an introductory first course."—*Nature*.

The Experimental Basis of Chemistry.

Suggestions for a series of experiments illustrative of the Fundamental Principles of Chemistry. By IDA FREUND. Edited by A. HUTCHINSON, M.A., and M. BEATRICE THOMAS. With 71 diagrams. Demy 8vo. 32s 6d net.

"Miss Freund's influence as a teacher extended far beyond Newnham. . . . She devised and elaborated for her first-year students a course of practical work which forms a good illustration of her unfailing insistence on thoroughness and care in experimentation and in scientific thinking; and upon it the present work is based."—*The Times*.

History of Holland. By GEORGE EDMUNDSON, D.Litt., F.R.G.S., F.R.Hist.S. With 2 maps. Demy 8vo. 22s 6d net. Cambridge Historical Series.

The aim of the series to which this book belongs is to sketch the history of Modern Europe, with that of its chief colonies and conquests, from about the end of the fifteenth century down to the present time. The title, *History of Holland*, given to the volume is fully justified by the predominant part which the great maritime province took in the War of Independence and throughout the whole of the subsequent history of the Dutch state and people.

Sir Philip Sidney: Complete Works, Vol II. Containing the last part of *The Countesse of Pembroke's Arcadia*, *Astrophel and Stella*, and other Poems, *The Lady of May*. By ALBERT FEUILLERAT. Crown 8vo. 12s 6d net.

Edmund Burke: A Letter to the Sheriffs of Bristol: A Speech at Bristol on Parliamentary Conduct: A Letter to a Noble Lord. Edited by W. MURISON, M.A. Extra f'cap 8vo. 7s net. Pitt Press Series.

"Intended for the use of higher forms in schools. . . . and should be a valuable aid to an intelligent preliminary study of Burke's works."—*The Times Educational Supplement*.

FETTER LANE, LONDON E.C.4: C. F. CLAY, MANAGER

the belief that to know what is right is enough, and on the other hand, you get the feeling of the moralist that knowledge is not enough, and there comes a positive dread of knowledge. As an illustration Miss Royden used the difficulties usually met by teachers in dealing with matters of sex. She urged that knowledge should be given to teach the right use of this great power, and that, because the majority of men desired goodness, this knowledge given in a reverent way by enlightened parents might be a revelation of joy as the child is led to feel the divine beauty of creative power. But this knowledge must be given by no one who shrinks from it, but by those who understand that this force in all of us can be used in joyful service for all. We must be guided by that wisdom which the author of the Book of Wisdom called "the image of God Himself."

FOREIGN AND DOMINION NOTES.

FRANCE.

Commemoration of the noble dead follows commemoration—happily enough at the present time, when so much attention is being claimed for what is sordid and temporary. Last year Italy was honouring Dante, of whom it was said in the fine address sent by the University of Leeds to the Citizens of Bologna: "Cum Shakespeare nostro, animam plurimi aestimavit; cum Miltono et Wordsworthio, animum sedem habere inexpugnabilem censuit," or, in the English version: "Like our Shakespeare, he thought nobly of the soul; like Milton and Wordsworth, he believed in man's unconquerable mind." This year France celebrates the Tercentenary of Molière, a poet of a lower flight than the four just named, yet of rarest excellence in his own order.

Born in January 1622, Jean-Baptiste Poquelin lives still as Molière, a real personage, when most of his contemporaries have become shadows. His plays have kept interest in the playwright and actor alive. Still precious are his dainty touches; his terse phrases embellish the language of modern France. Nor have his characters become puppets which we take carelessly from a dusty, half-forgotten box; they palpitate still as if of our flesh and blood—Tartufe, Monsieur Jourdain, Harpagon, Trissotin, Don Juan ("l'épouseur du genre humain"), that adorable rascal Scapin, and the rest. His art is still fresh because its salient qualities—eloquence, wit, fineness of touch, and sober good sense—are those which never grow out of use and staled. Nor is it as an artist only that he is entitled to be remembered. There was in the man a certain earnestness the more conspicuous as having for a background the frivolous, if splendid, court of Louis XIV. The purpose of comedy, he said in the Preface to "Tartufe," is to correct the vices of men: "C'est une grande atteinte aux vices que de les exposer à la risée de tout le monde. On souffre aisément des répréhensions, mais on ne souffre point la raillerie. On veut bien être méchant, mais on ne veut point être ridicule." And at the end of the play it is wished that even the wretched hypocrite who gives it name, "au sein de la vertu fasse un heureux retour," may make a happy return to the bosom of virtue. To estimate the general soundness of the poet's morality, his plays should be set against those of the post-Restoration dramatists in England, as Macaulay has compared the "École des femmes" with Wycherley's "Country Wife"; the French author stands for virtue, whilst "Wycherley's indecency is protected against the critics as a skunk is protected against the hunters: it is safe, because it is too filthy to handle, and too noisome even to approach." It may be good that dramatists should have a purpose, and it is laudable that they should uphold purity of life; Molière stands out, however, among the purposeful and the moral by the richness of his comic vein, the abundance of his subjects, and the variety of his characters. He was impressed, moreover, with a distinctive stamp of nationality. As Giusti, in spite of his own protest, has been called the Italian Béranger, so Goldoni has been called the Italian Molière. There never was an Italian Molière any more than there has ever been an English or a German Molière. With whatever limitations, and with whatever merits, Molière was the very incarnation of the French genius. As such he he acclaimed and honoured!

GERMANY.

The *Leipziger Lehrerzeitung* gives the front place in its *Literarische Beilage* (December 1921, No. 12) to an article, largely bibliographical, on "Volkshochschulfragen." Since there is at the moment interest awake for these *Volkshochschulen* (see Dr. Eugenstock's article last month), we borrow some information

about them from the Leipzig journal. It was in 1905 that a Society to Promote Country *Volkshochschulen*, the first of its kind, was founded in Nordschleswig. After the war, institutions of this sort seemed to spring from the earth, and in the future they are likely to play an important part in the education of the people. The State Governments are turning ever-increasing attention to them; indeed, both in Prussia and in Saxony the Kultusministerium has a special Department for their affairs. *Volkshochschule* problems are discussed at special *Volkshochschulwochen* ("Weeks") held in various parts of Germany; whilst some States, Saxony for an example, propose to make suitable provision for *Volkshochschulen* in their Budgets. The Danish *Volkshochschulen* are residential: young persons of eighteen to twenty-five years live together for the time—from three to five months—during which they are under instruction. In Germany, these hostels are rare; there is one, however, at Dreissigacker in Thüringen and one at Schloss Tinz, near Gera, in the old Principality of Reuss. But in numerous places, small and large, non-residential Town *Volkshochschulen* have sprung up; whilst in some cases university courses for workmen have formed the nucleus of a popular academy. The question of Country *Volkshochschulen* is examined by Ökonomierat Lembke in a brochure, "Ländliche Volkshochschulsiedlungen," in which he advocates the founding of rural settlements in connexion with such establishments. In general, a considerable "literature" illumines the subject, to which, moreover, at least two journals are devoted—the *Volksbildungsarchiv*, now in its third year of existence, and the monthly *Die Arbeitsgemeinschaft* (Leipzig, Quelle & Meyer).

We collect some various scraps into a paragraph. (i) German newspaper editors are complaining of their lot. A Berlin *Vollredakteur* in the eighth year receives 3,100 Mk. a month; a *Bahnmeister*, similarly situated, 3,130 Mk. As to contributors, the big journals used to pay 10–20 Pf. a line; they pay now from 40 to 60 Pf., which is equivalent to 2–3 Pf. of the old money.—(ii) Although forbidden by the Ministry, Der Erste Allgemeine Deutsche Schülertag (First General Meeting of School-pupils) was held at Hannover. Some 3,000 pupils from various parts of Germany resolved on loyalty to country, purity of life, and simplicity, and expressed gratitude to the fallen dead.—(iii) The Life of Christ has been "filmed" by an Italian firm. The *Leipziger Lehrerzeitung* (XXVIII, 41) protests against the degradation of a noble theme.—(iv) At Berlin, the Arndt-Hochschule began its sixth yearly course on January 16. It is nationalistic, its aim being *der Aufbau eines klaren Bewusstseins vom Können und Müssen des deutschen Menschen*.—(v) At Aachen, a Belgian middle school is being opened, with Prof. van Gorpe as head master. Outside of the occupied region the Prussian Minister has ordered that Belgians shall not be admitted to German schools, a German child having been refused admission to a Belgian school.—(vi) The communistic teachers of Germany, at their first *Reichskonferenz*, resolved that a communistic teacher must preach communism in the classroom as well as outside of it, and must fight for the proletarian and secular *Einheits- und Arbeitsschule*.—(vii) The Comenius-Bücherei at Leipzig completed its fiftieth year of existence, November 15, 1921. Its collection of educational material and books is right notable: in September it had 251,000 volumes—"3,000 metres of books without a gap."

UNITED STATES.

In the *Educational Review* (LXII, 5) the President of Columbia University writes, under the rubric "The Closing Door," on the unsatisfactory position of education. Formerly, American education meant opportunity; through it the rail-splitter or the tanner could reach the White House. But the moment we accept the amazing fallacy that there is no such thing as general training, that there are no forms of knowledge and no habits which may be made useful in any direction whatsoever, but that every individual must be directly trained for a specific task or calling and then held to it, that individual finds the door of opportunity shut in his face. Again, a school of thought has arisen which believes that what the single tyrant could not do in repressing freedom, the many-headed majority, which is governed by practical interests and not by morality, may undertake. It is a sore menace—this doctrine of the divine right of majorities. "Liberty is both the birthright and the destiny of the individual human soul, and it is to secure liberty and its just and useful exercise that all our forms of human association and of human co-operative endeavour exist. An education based on the doctrine of liberty prepares youth for an understanding and enjoyment of life by introducing him to his many-sided inheritance and by preparing his body, his mind, and his soul to make use of that inheritance in new undertakings and achievements, how-

ever modest or however obscure. Education so conceived and so based will open to youth the widest possible door through which ambition and capacity may pass to the cultivation of new fields and the enjoyment of new and unsuspected gardens of beauty."

We have often argued that there is no *opposition* between liberal and vocational education. Of an education that looks exclusively to vocation we will hear nothing, not being prepared to believe that the soul of a child can be fed and his mind developed merely by instruction in the making of nails or the splitting of slate. Nor do we hold the opinion condemned by President Butler "that every individual must be directly trained for a specific task or calling, and *then held to it*." We do think that, since most men *do*, and all men *should*, earn their bread, it is well for the individual and for the community that the mode in which each may most fitly earn it should be studied early. The number of the *Educational Review* to which we have just referred contains an article, of much interest in this connexion, headed "An Attempt at Vocational Testing." The Board of Education of the City of New York, we learn, has been making an experiment in giving children (in the first instance, girls) an opportunity to learn what different kinds of work there are, what special skill is required in each, and what the appropriate training is. Two departments have been organized—a commercial department and an industrial department, one week of twenty-five hours being spent in each, and the atmosphere of the business office or the factory is maintained so far as possible. In the commercial week a child is introduced to stenography, typewriting, filing, book-keeping, and switchboard operating. In the industrial week, as girls are in question, the matters submitted are hand-sewing, machine-sewing, and pasting. To illustrate the procedure, we may take typewriting, to which five hours are allotted. The names and uses of parts of the machine are explained: keys, space bar, ratchet, roller, paper release, and carriage. The "guide" keys and eight other keys are taught. The "touch system" is used. Stress is laid on the following points in the order of their importance: touch typewriting, correct fingering, elastic touch, accuracy, and good sitting position. Words and exercises are typed in rhythm. The testee (if the word be conceded us) having learned what the work of typewriting is like, the testers proceed to estimate what her aptitude for it is. They rate (and enter the rating on her card) form, muscular movement, and ability to follow directions; whilst all the time they are studying her as to persistence, interest, and personality. In some such way the inquiry is pursued in the other subjects of the two departments, with a view to the ascertaining of the fit vocation for the child. Whilst many American educators and psychologists approve the tests, others urge that the duration of them is too brief. For our part, we are reporting an experiment, and we say once more that in so far as education is a science it must proceed experimentally.

We believe in internationalism (in a sane sense) through the exchange of thought-products. France speaks as if the *interpénétration intellectuelle* which we desiderate were identical with the diffusion of French culture (*La Vie Universitaire*, II, 10). It implies at least the reception of it, and Bulgarians, Rumanians, and Yugoslavs will absorb it at Paris. There are other cultures also, and other inspirations. What of this sort the United States has to offer is shown in "Facilities for Foreign Students in American Colleges and Universities," Bulletin, 1920, No. 39, issued by the Bureau of Education and just received. The great American schools of science and learning are likely to attract foreign students in growing numbers. According to the old tag, "Civilization flows westward"; it is time for a reflux and for cross currents.

ORANGE FREE STATE.

In the Province, as elsewhere, the financial depression affects education; nevertheless, the Report for the year to December 31, 1920, is of the hopeful sort. When that year closed, the number of children enrolled at public and aided private schools was 42,879, an increase of 2,098 on the previous year. Satisfactory, too, is the fact that there is a marked growth in the tale of children over sixteen (the age-limit of compulsion) who continue their school studies. By Ordinance 10 of 1920, school fees for instruction in ordinary school subjects (but not for music or for teaching in evening classes) were abolished as from April 1, 1920. By another Ordinance of the year Afrikaans was placed on an equality with English and Netherlands; moreover, a new type of school was created—the intermediate school, which carries its pupils to a standard attainable four years after passing Standard VI. For secondary education, facilities have now been provided in practically every town and larger village of the Province. The University Matriculation was more popular than the School-Leaving

Examination; we observe, by the way, that 135 candidates who entered themselves for it against the advice of their teachers all failed. The payment of teachers looks on paper to be fairly liberal, the head master of a secondary school, for example, receiving from £550 to £825 a year, a head mistress from £425 to £625; the purchasing power of such sums in the Orange Free State we do not know. For assistant teachers the principle of payment in accordance with qualifications is being followed, so that the teacher, if efficient in his work, gets the salary of his grade wherever he may be employed. The training of teachers was being studied in 1920 by a Commission.

INDIA.

Jamshedpur lies in the Singhbhum District of Bihar and Orissa, whilst it is only separated by a river from the State of Seraikela. It is reached by the Bengal Nagpur Railway, being 155 miles from Calcutta on the main line to Bombay. Now, at Jamshedpur are the works of the Tata Iron and Steel Company; or, to speak fairly, on land once covered with dwarf trees and besprinkled with villages in which dwelt aboriginals and low-caste Hindus, the ironworks have called into being the town of Jamshedpur. With trade, education has thriven there. Next October will be opened a provincial Technical School to train foremen, and in return for Government grants the company will reserve places for native students from Bihar and Orissa. Already there are prosperous schools, which are managed by a School Committee, constituted of employés of the Company and Indian ladies. Girls are provided for in an upper primary school with Hindi and Bengali sections and six teachers. Again, in the neighbouring villages there are eight free primary schools toward which the Company yields support. These simple facts are of some significance; yet to some in India it will be unwelcome that education should follow trade, as trade follows the flag.

We have received:—(i) Proceedings of the Conference of Inspecting Officers, held in Lahore, April 1920; (ii) *Journal of Indian History* (Milford, Rs. 9 per annum; single copy, Rs. 3), the first number of a serial published by the Department of Modern Indian History, University of Allahabad. The editor and the chief contributor to the present issue is Dr. Shafaat Ahmad Khan, Professor of History in that university—not a mere compiler of books, but an industrious and able student of sources. In it Beni Prasad writes learnedly on "The Mughal Government, with special reference to the Reign of Jahangir." We anticipate that the new journal will be found indispensable by all investigators of Indian history.

CORRESPONDENCE.

MODERN STUDIES.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Many teachers of modern languages will be grateful to Mr. G. F. Bridge for the article in the December number of the *Contemporary Review*, in which he diagnoses with much skill and insight the fundamental weaknesses of the present-day system of modern-language teaching in this country. It is, therefore, without any desire to impugn the validity of his main conclusions that I wish to suggest two points on which we think his thesis needs qualifying.

(1) Mr. Bridge urges that more time should be spent on Montesquieu and de Tocqueville in preference to writers that tend to form taste rather than judgment; but seems to indicate that these are scarcely difficult enough, and that it is not possible to find French authors that form a really adequate mental training. What about Calvin, Descartes, and Pascal, not to speak of more recent philosophers, such as Secrétan, Renouvier, Maine de Biran, Bergson, and Boutroux? These may not be Platos, or even Kants, but any of them would supply "the effort to understand and criticize a difficult work or an obscure system of thought."

(2) I do not think that it is quite fair to place on a level a course of Greek and Latin and another of French and German. Although the student of ancient languages covers in some ways a wide field, he scarcely goes outside the range of authors of the classical period; he does not study the language in its history and variations, nor does he attempt to speak it, to think in it, to wield it as his own tongue, and to embrace Latin or Greek civilization as a whole. The student

(Continued on page 122.)

FROM
Mr. HERBERT RUSSELL'S
LIST OF BOOKS.

JUST PUBLISHED.

L'Entente Cordiale des Bébes. By MME GUTH. Crown 8vo. Price 6d.

A selection of English Nursery Rimes done into French for home and school use.

The Old Order and the New. (Book III. of "The Ancient Civilizations" Series): being the story of **The Roman Empire and the Beginnings of Modern Europe.** By EMILY M. BURKE, L.L.A., Hornsey County School. Crown 8vo. cloth. Price 3s. net. *Full Prospectus on application.*

"This well-printed book continues a series of which the previous volume deals with Ancient Greece and Republican Rome. The book is intended for pupils in the middle and senior forms of secondary and central schools, and is offered as of great interest to students in continuation schools. It is an excellent survey." — *The Times Educational Supplement.*

With "The Shining East" and "The Violet Crown and the Seven Hills" it completes one group of a series, yet it is at the same time complete in itself.

A Regional Geography of the Six Continents. By ELLIS W. HEATON, B.Sc., Tynemouth Municipal High School, North Shields.

Book V.—Australasia. Price 1s. 3d. net.

Book VI.—South America. Price 1s. 6d. net.

Previously published.

Book Ways: An Introduction to the Study of English Literature. By EDITH KIMPTON, M.A., A.K.C.

New Edition, with a Prefatory Letter by the late THEODORE WATTS-DUNTON. Crown 8vo. Cloth, 296 pp. Price 3s. 6d. net.

"To cover the whole ground denoted by the term 'English Literature' in 300 pages is a feat that requires some ability. To do this, and at the same time make the book readable and interesting, requires more. This is what Edith Kimpton accomplishes in 'Book Ways.' Her book is a *multum in parvo*." — *Scotsman.*

English Composition: A Systematic Course for School Use. By HARRY PINE. With an Introduction by F. H. HAYWARD, D.Litt., M.A., R.Sc.

Teacher's Edition. Crown 8vo, cloth. Price 3s. 6d. net.

Pupil's Edition. In Two Parts. Price 8d. net each.

The work is intended for class use, and aims at the direct teaching of composition on a definite plan by means of a series of original and progressive exercises. These are designed to correct the faults most frequently found in children's composition, both oral and written. It forms the basis for the teaching of children of all ages, and yet leaves plenty of scope for originality on the part of the teacher.

Essays and How to Write Them. By AVARY

H. FORBES, M.A., Barrister-at-law, Gold Medallist in English Literature and Senior Moderator, Dublin University. Containing:—Part I. The Theory of Essay Writing; Part II, Outline Essays; Part III, Specimen Essays, with Outlines; and an Appendix, containing a large number of suggested Subjects for Essays, grouped under nine main headings. Crown 8vo. Cloth, 154 pp. Price 2s. 6d. net.

French Composition. By F. GUILLOT, Agrégé de

l'Université de France, Licencié ès Lettres, Professeur au Lycée Charlemagne, Paris, and H. PROIX, Professeur à l'École supérieure J. B. Say, Paris Professeur d'École Normale. **Comprising "The Grammar of French Composition" and "English Prose for Translation into French."** With a Vocabulary. Crown 8vo. Cloth, 280 pp. Price 3s. 6d. net.

The Translation of French Unseens.

By EUGENE PERROT, B. ès L., French Master, City of London Schools. Crown 8vo. 187 pp. 2s. 6d. net.

Contains a valuable introduction dealing with "Method in French Translation" and "Difficulties in French Syntax," followed by a carefully graduated collection of 147 extracts for translation collated from French classical authors and examination papers, and a full vocabulary.

of French and German is called upon to do all these things; and to carry two living languages side by side seems to us a heavier burden than that borne by the classical man.

I would suggest that the modern languages department of a university should offer a choice between two honours courses: (a) the study of two modern languages, confined to modern authors (*i.e.* in French to post-renaissance writers) and to the modern form of the language, but including authors of far greater educational value, and of much more recent date, than is usually allowed in syllabuses; (b) a complete study of one language, its history, philology, and literature, together with the history and institutions of the civilization it expresses, which course should be called "School of French (or German, or Italian) Studies," in preference to "Language and Literature." In the framing of both those syllabuses Mr. Bridge's valuable criticisms and suggestions should be given the careful consideration they deserve.—I am, Sirs, yours faithfully,

ROGER H. SOLTAU.
The University, Leeds,
December 15, 1921.

THE COST OF EDUCATION.

To the Editors of The Journal of Education and School World.

SIRS,—It is useless to disguise the fact that the mass of the public will demand an inquiry into the expenses of local government, as Sir Eric Geddes's Super-Axe Committee has inquired into national expenditure. The chief burden on the rates is caused by education, and the rate-payers will endeavour to secure an abatement in these charges. During the Christmas congress season almost every speaker asserted that not a penny should be subtracted from the salaries of teachers. They have so recently received a living wage that they will not willingly descend into the pit once more. But economies may be made in other ways than by a reduction of salaries: one proposal is that no child shall be sent to an elementary school before the age of six. Another is that for the vast majority formal book education is more or less a waste after the age of fourteen, and that Mr. Fisher's Continuation scheme should be scrapped. Mr. Stuart would have fewer doles, and these more wisely granted. It is undoubtedly true that a quarter of the places in a secondary school are far too many to give to non-paying scholars. We are a commercial nation, and value a thing by what we have to pay for it. On these grounds alone every parent should pay something—even if it is only a penny a week—towards the cost of the education of his offspring. The teachers would be wise in suggesting methods of economizing, or some may be forced on them that may be distasteful. One thing is certain: the nation is very poor, and cannot afford the sums it is now spending on education. And it has an uneasy suspicion that it does not get value for what it spends.—Yours, &c.,

RATEPAYER.

THE CONFERENCE OF EDUCATIONAL ASSOCIATIONS.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—When the project of what is now called the Conference of Educational Associations was first mooted, the promoters held out the prospect of its becoming "a British Association meeting of the teaching profession." How far this expectation has been realized can best be judged by an inspection of the hundred names of speakers and chairmen given in the official programme. Amongst these may be discovered one head master of a secondary school, three head mistresses, one assistant master, one assistant mistress, and some five or six teachers in elementary schools. Possibly this list is not exhaustive, as descriptions are not appended in all cases, but it cannot be far out; and, if we say that of the hundred speakers not more than fifteen or so were persons actually engaged in school teaching, we shall surely be within the mark.

The names of one professor of education, one training college lecturer, two inspectors, and three educational administrators may also be found. To be brief, four-fifths of the speakers appear to be persons unconnected with schools. I believe I am also right in saying that only once in ten years has a schoolmaster been President of the Conference.

Such a series of meetings may have its value, but it undoubtedly does much harm by giving the public the impression that education is in the hands of amateurs, theorists, and cranks. People who are doubtful whether popular education is doing much good—they are a very numerous body—will not find their anxiety allayed by

the reports they read in their morning papers. Is a real "British Association meeting" of teachers of all sorts and ranks, managed by teachers for teachers, at which the public would listen to teachers instead of teachers listening to members of the public, a wholly impossible dream? Surely if teachers are, as they declare they are, a profession, they ought to be able to hold a professional meeting without the assistance of judges, ecclesiastical dignitaries, actresses, and popular writers.—Yours &c., B.

A NOTE ON BIOGRAPHY.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—In the many reports on citizenship which have recently been issued, it is noticeable that little or no attention has been paid to the power of biography in the school. The effect on young people of reading of men and women whose lives have the ring of true nobility and character (especially those in the higher forms of secondary schools) cannot be accurately gauged. The reading of a good life by a pupil might be the turning point in his or her own life. To imagine that young people are not attracted by biography is a mistake: an introduction merely is needed, and interest follows. High above all other lives (with the exception, of course, of the life of Christ) stands the life of Abraham Lincoln, cheap books on which are published by Harrap, Oxford University Press, Macmillan, and Jack, among others. The story of how this man rose by sheer force of character from farmer's boy to the dizzy heights of a presidency will fire any youngster's imagination and ambition; even hardened educationists have been thrilled by it over and over again. The writer leaves it to the teacher himself, however, to suit his own taste in this matter, and merely suggests that the lives studied should be fairly modern and have an everyday application as far as possible. Nothing daunts a pupil more than to know that the events of which he is reading happened ages ago; his mind is often not far enough developed to recognize old principles in their modern application, and the whole atmosphere of to-day is needed. Such a study as this (perhaps more appropriately a class-room "aid") is capable of much extension in the hands of a capable teacher.—Yours &c., E. L.

A REPORT on the selection of children for further full-time education in the municipal secondary schools and district central schools has been issued by the Manchester Education Committee. This year there were over 22,000 children in Manchester eligible by age for admission to higher education. After the preliminary test 7,611 were left who scored over 50 per cent. Of these, the parents of 3,842 were unable or unwilling to let their children continue their education. For the remaining 3,769, there were only 1,398 vacancies forthcoming: 470 at the high schools, and 928 at the district central schools. The method of selection was by examination, written and oral. The report of the examiners lends point to the contention of the Sir Henry Newbolt's Committee that all is not well with the English instruction in the schools. No use was made of the Simon-Binet tests or any of the psychological apparatus now so much in vogue. In the same city, Dr. Alfred A. Mumford, Medical Officer of Manchester Grammar School, has delivered a lecture before the Statistical Society, giving an account of researches he has been carrying out in connexion with the Medical Research Committee, with a view to discovering by physiological methods which children are best able to undertake advantageously strenuous indoor study through a number of years. Dr. Mumford has been applying (with necessary adaptations and with much ingenuity) some of the methods adopted by the Royal Air Force in testing their candidates for training as air pilots. Dr. Mumford's results certainly tend to establish some definite correlation between respiratory capacity and the power of sustained mental effort. The close relation between ample breathing and vigorous health is, of course, established. Dr. Mumford's results, so far as they go, go to prove that there is also a close relation between respiratory persistence and will power. After all, what the selecting authority want to know is, not only how much definite and assessable knowledge the child of eleven has been able to acquire, they want to know what capacity he has for progress, and in this the will plays perhaps a more important part than the intellect or the physique. The truth would seem to be that for really scientific selection we need a combination of three methods: the physiological, the psychological, and—most difficult of all, not yet devised—some method for estimating the power of the will and its responsiveness to the intellectual stimulus.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.
CONSTITUTED BY ORDER IN COUNCIL, 29th FEBRUARY, 1912.

1922 ?

The Council is engaged in a vigorous campaign against proposals for

RETRENCHMENT IN EDUCATION.

Its efforts are gravely hampered by the fact that some qualified teachers are not yet registered. In the present crisis it is vitally important that the Council should be recognized as a body which is expressing the views of

A UNITED TEACHING PROFESSION.

All who are qualified should become Registered at once, while those not yet eligible for full registration should seek admission to the List of Associate Teachers.

Write to-day for particulars to

THE SECRETARY,
TEACHERS REGISTRATION COUNCIL,
47 BEDFORD SQUARE,
LONDON,
W.C.1.

OXFORD UNIVERSITY PRESS

THE CLARENDON SERIES OF ENGLISH LITERATURE

THE LEGACY OF GREECE.

Edited by R. W. LIVINGSTONE. Illustrated. 7s. 6d. net.

CONTENTS:—Hellenism, by Gilbert Murray; Religion, by W. R. Inge; Philosophy, by J. Burnet; Mathematics and Astronomy, by Sir T. Heath; Biology, by D'Arcy W. Thompson; Medicine, by Charles Singer; Literature, by R. W. Livingstone; History, by Arnold Toynbee; Political Thought, by A. E. Zimmern; Sculpture, by Percy Gardner; Architecture, by Sir Reginald Blomfield.

A CHART OF ENGLISH SPEECH SOUNDS, with Key-words and Notes.

By DANIEL JONES. Paper cover, 6d. net.

THE PRONUNCIATION OF ENGLISH, reduced to Rules by means of a System of Marks applied to the Ordinary Spelling.

By W. A. CRAIGIE. Limp cloth, 1s. 9d. net.

The tract is of importance as showing that English spelling is more phonetic than is usually assumed; a few general rules are given, and a small number of diacritics is found to suffice for the removal of the uncertainties remaining. It seems probable that the new system may be of great service in teaching English, especially to foreigners.

NORMAL

THE COLLEGE FOR CORRESPONDENCE TUITION.

FOUNDED 1889.

THE NORMAL CONVERTS YOUR STUDY INTO A UNIVERSITY.

Founded more than thirty years ago by teachers for teachers, the Normal stands to-day a monument to the fact that at its inception it was based upon right principles and built on sound methods. The Normal has stood the test of time, and is firmly established as the most reliable Correspondence College. The keystone of the Normal is the concentration of the efforts of most highly qualified and experienced Tutors on the requirements of the individual student. Thus the Normal converts your study into a University.

OCCASIONAL NOTES.

THE sweeping recommendations of the Geddes Report with regard to educational expenditure demand the most careful consideration. While the economist, usually somewhat hostile to educational interests, will say that this and more also must be done, the educationist will argue that the main proposals are not in the interests of true economy, for they cannot be put into effect without the gravest loss in educational efficiency. Both statements will be expounded at length, but can it safely be assumed that no economy is possible? That would be tantamount to proclaiming our present educational administration to be perfect. True economy cannot be opposed; it is for the nation to separate the chaff from the wheat, and to refrain from any so-called economy which would seriously affect the efficiency of the schools and universities at a time when it is of the utmost importance that the education of the country should be maintained on a sound footing. Other countries are increasing and improving their educational facilities rather than decreasing them. National prosperity depends mainly upon our ability to meet foreign competition. To what extent may our ability in this respect be injured by the adoption of any of the economy suggestions?

BY the compulsory raising of the lower age limit of entrance to the primary schools, a saving of £1,785,000 is expected. But what will happen if children are shut off from the schools until this age? They will undoubtedly spend much of their time in the streets, exposed to moral and physical dangers, and they will lose a certain amount of medical supervision. Can this be regarded as a true national economy? The

proposal to increase the size of classes is a most reactionary one. They are already far too large. The Report states that in June, 1921, there were 32.4 children to each teacher. We do not know how this figure was arrived at, for it is a matter of common knowledge that classes of sixty in the primary schools are still usual. If the new basis is adopted, it must happen that many classes will contain seventy or even eighty pupils. Is this a proposal which the average good citizen, economical though he be, can in his calmer moments face with equanimity?

GRANTS for secondary education are regarded in the Report as providing State-aided or free education to a class which can afford to pay an increased proportion, or even the full cost, of education. There is, on the contrary, a strong body of opinion that many parents of children in secondary schools are making considerable sacrifices in order to pay fees. They are also, of course, paying their due proportion of the education rate. The doubling of the number of pupils in secondary schools is one of the most hopeful things that has happened in recent years. We have just largely extended the franchise. It is of the utmost importance to educate the new democracy to realize its civic responsibilities. This cannot be done before the child has reached the age of fifteen or so—i.e. at a time when he ought to be in a secondary school. To do anything that would tend to stifle the new enthusiasm for secondary education would be a blunder in statecraft of the first magnitude. Raising fees still further may have this effect. Certainly the Report makes much of the grant made to schools like Blundell's and Berkhamsted. But we venture to say that even in these cases the grant which is given may be wisely spent, and that, as the Report itself states, it is cheaper for the local authority to support these schools than to set up maintained schools. To reduce the grant would mean that in many cases these schools would be unable to pay salaries high enough to attract efficient teachers.

IN recommending a reduction in teachers' salaries, the Report emphasizes the fact that 35 per cent. of the local authorities have not as yet adopted the standard scales for primary teachers. But it makes no mention of the provisional minimum scale, which has been universally adopted, and of the circumstance that the primary teachers, although they consider that the standard scales ought to be adopted as from last April, cannot, under the provisional minimum agreement, unduly press for further concessions until next year. The secondary scale has been adopted in most areas. While it is in a sense true to state that the scales were not imposed by the Government, and that local authorities pay what they think fit, the teachers maintain that the representatives of the local authorities were given power to come to an agreement, and therefore that failure to honour this agreement is a breach of faith. The implication that the Burnham scales should be reduced with the cost of living will be strongly combated on the grounds that the desirability of having a sliding scale was discussed by the Burnham Committee and rejected. The average salary of primary teachers is not mentioned, but it is stated that the average salary of a secondary teacher is now £332, as compared with £173 before the war—an increase of 92 per cent. Thus, on the Committee's own showing,

the increase is only just equal to the present percentage cost of living figure, and the average has been much less all through the war when the cost of living was high. Again, the general consensus of public opinion in 1914 was that salaries were lamentably inadequate, and that the teaching profession was failing to attract entrants of the required standard. There will be more support among the general public for the proposal to put pensions on a contributory basis. But here again the question of the pension was before the teachers when they accepted the Burnham scale. It is obvious that they took into consideration the effect of the new scales on superannuation. Thus to make the pension scheme contributory would be in reality to use a subtle method of reducing the scales. The proposal raises the very grave issue as to whether or not all Government superannuation schemes should be on a direct contributory basis.

THE genesis of the proposal to found a new public school, under the ægis of the Association of Preparatory Schools, arises from the great difficulty which

The New Public School Proposal.

found nowadays in obtaining vacancies at the existing public schools for the number of boys who leave the preparatory schools each year. About 4,800 boys were entered last year for the Entrance Examination to eighty of the public schools. Of these a large number failed in the examinations, owing to the high standard now required, and naturally so, by the laws of supply and demand, and many of those who showed themselves up to this standard were turned down for lack of room. Whatever may be said against our public school system, it is the source of envy and admiration to the rest of the world. To this is due the increasing number of boys who are sent home for education from the Colonies, and the increasing number of foreign boys whose parents realize the advantages to be gained from a public-school education. At the same time an increasing number of parents in England are also realizing this, as they have the means to take advantage of what lies at their doors, while those who have themselves been at public schools will deny themselves everything in order to send their boys to similar schools. In these circumstances, it will be many years before the "boom" becomes a "slump." There must, therefore, be some extension of accommodation. Some of the existing schools have opened new houses, which have filled almost at once. Preparatory schools, too, have increased in number, but it is hard to get vacancies even in them.

WHY not, therefore, increase the number of public schools? In the middle of the last century several were founded—Rossall, Marlborough, Cheltenham, Clifton, to name only a few.

Stowe?

These quickly acquired the famous "public-school tradition," and in a few years became household words all over the empire. At the present moment a wonderful chance offers to add to these great names the name of Stowe, the magnificent estate near Buckingham, which is well fitted and easily adaptable to the needs of a public school. Some who opposed the scheme have become its warmest supporters after a visit to the place. A description of it would fill a volume. It is almost a national duty to save the place for such a purpose, and all that is needed now to make the scheme a *fait accompli* is to find the funds to start

it. The ideal thing would be for some benefactor who has England and her education at heart to come forward to do this great thing. Failing that, recourse must be had to a system of life governorships, which has proved successful in the past, though the other source of funds is preferable. Whatever is done must be done soon, for the offer of this glorious place, Stowe, remains open only for two months. *Bis dat qui cito dat.*

AT the cost of many thousands of pounds to the country, the four educational committees appointed by the Prime Minister have completed their

Preparatory Schools and the Four Reports.

reports, after exhaustive examination of witnesses and a thorough study of the problems from every conceivable aspect. Preparatory-school head masters, however, are bound by the requirements of the public schools, as set out in the Common Entrance Examination and public-school entrance scholarships, and, so long as an examination from above determines the curricula below, the money spent upon Prime Minister's Committees, Conferences, and Royal Commissions is largely wasted. The lot of the head master who wishes to follow out some, at least, of the recommendations is an unenviable one. The Head Masters' Conference suggests that the time spent upon Latin in the curriculum of the preparatory school should be in excess of a combination of mathematics and English, or of a combination of French and English. After all, preparatory-school head masters have to earn their living, which, in the majority of cases, depends upon a record of success in passing boys into public schools, or upon a scholarship list to schools which, in 90 per cent. of cases, award scholarships mainly, if not solely, upon proficiency in Latin, and often Greek also. In order, therefore, to provide a reasonable education in accordance with the recommendations of the four reports, the head master has to risk failures in the Common Entrance Examination, which has now become competitive, and has also to relinquish all hope of getting scholarships for his boys. It is, however, significant that Marlborough has just issued new regulations for scholarships and, for the first time we believe in the history of public-school education, has made Latin an optional subject for modern scholarships. The only compulsory subjects are English and Scripture, in addition to which a boy has a choice of any three of the following five subjects:—Mathematics, Science, Latin, French, and German. We therefore hope that this progressive move may be followed in other quarters.

THE proposal to create a Greater London, which will have charge of education as well as other services, needs to be carefully watched and examined. Education

Greater London Proposals.

differs from many other services, inasmuch as it involves close co-operation between administrator, parent, and teacher. Where all personal touch is lost there is a tendency to over-emphasize the value of rules and regulations, to lose sight of the human element in regarding the smooth running of the machine. In such circumstances, an educational system loses elasticity and efficiency. If, as may well be argued, the administration of the London education service is already too bureaucratic because its area of operations is too big, the evils that have already arisen will be intensified. There are no mathematical principles that can be used to fix the best

size of the administrative unit for education: it must not be too large, and yet it should be large enough to permit one authority to provide a variety of institutions. While Greater London might, perhaps, prove unwieldy, the surrounding counties might well be given control over all elementary education within their areas. Many of the Part III authorities are too small, and their administration is necessarily expensive.

THE Senate of London University have adopted a resolution inviting the Adjutant of the University Officers' Training Corps to take over the duties of the Secretary to its Military Education Committee which is responsible for the administration of the contingent, and for other work relating to military education. In these days of drastic economies, the device of letting two jobs be done by one man has its attractions, particularly to the institution which has to economize. It must be remembered however that, when the Territorial Force was established, the divorce of training and administration was adopted as a cardinal principle. Arising as a necessary reform from actual experience with the old Volunteers, it has worked well in practice, proving both economical and efficient; and it is generally acknowledged that Lord Kitchener's refusal, during the War, to make full use of the administrative machinery existing in the County Associations was a mistake. When the Officers' Training Corps was constituted, in 1908, the same principle was adopted, the universities taking the part of the County Associations. Further, the functions of the universities in relation to the Army are not limited to the training of university students as cadets of the O.T.C. There is an important field of work in connexion with the military education of officers of the Territorial Army. This is a civilian force, and should look naturally to the universities for its technical education, particularly the staff training of its officers. One of the chief lessons of the War will remain unheeded if the War Office refuse to arrange for this essential training.

CIRCULAR No. 1244 sets forth the decisions of the Board of Education as to the extent to which they may recognize for grant purposes the counting of service with the Forces of the Crown during the War, on the calculations of the salaries of men teachers in Secondary Schools. It is noticeable that women's war service cannot be recognized under this circular, also that "service with the Forces of the Crown" is taken to mean service with the Colours, or similar service with the Navy or Air Force. It does not include a period of internment in an enemy country as a civilian prisoner of war. This last proviso is directly contrary to the clause in the Burnham report dealing with the matter. The Committee thought that a teacher unfortunate enough to suffer internment in this way ought not to be penalized regarding salary increments. Such cases are not numerous, and, if the Board had seen their way to agree, the expenditure involved would have been very small. With these exceptions, the circular gives no opening for criticism. The war service of graduates who were full time teachers at the outbreak of war or later, and who resumed teaching service at the first opportunity after demobilization, is recognized. As regards men who only commenced teaching service after the war, the teacher

must have entered service directly after demobilization, or after completing a full-time course for a degree. If the time spent on such a course falls short of three years, the difference between three years and the period actually spent in the course should be deducted from any period allowed for service with the Forces. Neither service before the age of eighteen, nor voluntary service after the armistice, should be counted. In the case of non-graduates, those who possess qualifications accepted by the Board as equivalent to a degree may be treated as graduates. Certificated teachers are to be dealt with according to the provisions of the former Circular 1227. The service of other non-graduates does not count.

WHILE expressing, at the moment, no opinion upon the important questions raised in our correspondence column by Mr. W. E. Paterson with regard to the teaching of geometry, we are bound to admit that he voices the views of an ever-growing body of thoughtful teachers. Much geometrical licence has followed the grant of geometrical liberty, and the absence of a reasonable degree of uniformity in the many variations in the sequence of geometry now adopted in schools affords ample justification of the plea for a review of the whole position. Nothing but good could result from a discussion on the subject by a conference of interested teachers, as Mr. Paterson suggests, and we welcome the information received from other sources that there is every prospect of the need for reform being adequately considered very shortly. Already the Incorporated Association of Assistant Masters have issued a *questionnaire* to all boys' schools in England and Wales inviting opinions from responsible teachers of mathematics, and probably the same course will be adopted with schools in Scotland. Interesting developments, too, may be expected at the Hull meeting of the British Association in September next, when the teaching of mathematics, with special reference to geometry, is to be discussed in joint session by Sections L and G—Education and Engineering. This discussion would be rendered all the more interesting and important if the collected views resulting from the *questionnaire* alluded to above could be considered.

IN spite of the interest aroused by *The Times* correspondence upon the feeding of schoolboys, we cannot feel that it has been very illuminating. Several mothers have written complaining that their boys are underfed; Old Boys have suggested that what was good enough for them ought to be good enough for their successors; housemasters have maintained that they ran their houses at a loss; and men of science have directed attention to the value of proteins and vitamins. We have heard all this before and still believe that each side exaggerates its case. No one who visits a public school and watches the boys at play can believe they are under-nourished; no one can, we think, believe that any sane body of men would undertake the really hard work and anxiety of a school boarding house from purely philanthropic motives. In saying this we are not imputing intentional misrepresentation to either side, but we believe that those schoolmasters who report that their expenses in connexion with their houses are greater than their receipts make the calculation after adding the cost of keeping themselves and their families to their "house expenses"; on the other hand, it is

probable that the boys who write home complaining that they are under-fed have really been given plenty of food, but of a kind they do not like. One of the most important duties of a housemaster is to discover the reason for this dislike. It will be agreed by every experienced and impartial thinker that the feeding at school must differ in several details from that in the homes from which the majority of our public schoolboys come. During the years of adolescence the amount of proteins taken after the midday meal must be reduced to a minimum, and a late dinner is not only unnecessary for a growing boy—it is harmful. For him a meat breakfast, followed by a substantial dinner at about 1.15, should provide sufficient animal food; tea, consisting of bread and butter or jam, at 6 o'clock; and a light supper of porridge or bread and cheese with cocoa at 8.30 should complete the day; and the correspondence seems to prove that this is the rule in most schools.

IN our opinion, the trouble lies not in the quantity or quality of the food provided, but in its monotony. Boys, like their elders, appreciate variety, and a housemaster who provides the same joints followed by the same puddings upon every fixed day in the week is inviting trouble.

**Variety
in Meals.**

If a cycle is necessary, which we doubt, one of eight days is much to be preferred to one of seven, but even in this case the cycle for the pudding course should differ from that for the meat. Another point too often lost sight of is the desirability of offering the boys a choice of food. It does not cost a penny more to provide roast mutton and roast beef twice a week than to have the former on, say, Monday and the latter on Thursday, yet the difference from the boys' point of view is enormous. Lastly, it must be remembered that the boys whom we are considering are accustomed at home to clean table linen, neat maids, and to having plants, &c., on their tables. We believe that many complaints are due to lack of attention on the part of the housemaster's wife to these details—in other words, what is wanting is not more food, but good cooking and more imagination on the part of schoolmasters and their wives.

FIRST THOUGHTS ON THE GEDDES REPORT.

ELEMENTARY EDUCATION.

THE most striking feature of the education section of the National Expenditure Report is the insensitiveness the Committee affect towards any but the financial considerations of this year and the year after. By intuition, or by the humbler processes of arithmetic, they appear to have arrived at the conclusion that a reduction of something like one-third in the education estimates is the goal to aim at, and that decided, they lay their plans as though national policies and parliamentary enactments can be reversed or abandoned with as little regard as would be given to cheap crockery broken and thrown on the dust heap. Their courage, their singleness of purpose may be admirable, but the one-sidedness of it all leaves the stronger impression. Widespread as is the agreement to-day that the nation's resources must be husbanded, there is surely as much agreement that economies must be reasonable. National policy issues from a process of balancing and compromise. There is always another side, which can only be ignored at the risk in small things of injury, in great things of disaster. The Committee ask us to cut deep into a policy which is

the growth of half a century as reckoned by the statute book, to change habits of mind which for large sections of the community have become convictions. Those who think about education—who have had the shaping of it, a class which includes many more than the practitioners, feel the burden of rates and taxes as keenly as any—more keenly perhaps than some, for as a rule they have no war profits to help them through the lean years. But they have never as a class allowed their conception of their duty to the State to be determined by financial considerations alone. If these colossal savings are to commend themselves to the thinking man the case must surely be fully argued, the relevant considerations must be freely and fairly stated.

The Committee would no doubt agree, premising that their task is discharged entirely in terms of finance. Yet even here they are hardly as helpful as one would have expected. True, they do discuss the arithmetic of some of their suggested economies, but either for lack of time, or perhaps because they shrink from the effects of their predetermined conclusion—or for tactical reasons—we are usually left in the end with some startling and unrelated figure, the analysis of which we must complete as best we can.

The Board of Education are "impotent": the local authorities are the villains of the piece; and it is all due to the "vicious" system of grants-in-aid proportioned to the cost of service rendered. It will be strange news for the local authorities; the students of public finance will rub their eyes. The control of the Board of Education extends to almost every detail of expenditure to-day. The local authorities are hardly more than the agents and ministers of the central authority. So close is the supervision that even with the greatest good will on both sides the administrative machine is with difficulty kept working. The situation would be well-nigh intolerable were it not for the gravity of the nation's financial position. And the instrument which has brought this about is just the proportional grant-in-aid of approved expenditure which Parliament is invited to discard. The history of this grant as applied to education is very short. Its possibilities as the instrument of central control have, however, been demonstrated by the sixty years' experience of the police grant. To challenge the principles of the grant at this time of day argues courage in the challenger. Let us leave it at that.

On the proportion which the grant in aid should bear to the total expenditure opinions will vary. Apart from all questions of the relative value of the service to the State and the locality which can be discussed *ad libitum*, it would be helpful to have the views of experienced administrators as to the upward limit beyond which the stake of the locality is too small to encourage economical expenditure, and the downward limit below which the control of the central authority upon the purpose of the expenditure ceases to operate effectively.

Their John-Bullish directness notwithstanding, the Committee appreciate the value of the manoeuvre for position. It comes out in their handling of the relations between the central and the local authorities. "There is no doubt," they say, "that local authorities have been urged into expenditure upon a scale which they would not have contemplated if left free." But the central authority is in a "position of impotence." The local authorities have contrived, so it is inferentially suggested, to get off with more than their fair share of the cost, and the transfer of liabilities from the Board to the authorities, if not potential saving, would at least be a virtuous act. Would it? No member of a local authority will be in much doubt as to the answer. The taxes are paid in sorrow, Lord Crewe once said, and the rates in anger. The tax burden has at least some pretensions to being scientifically adjusted to the backs of the bearers. Will anyone affirm the same of the incidence of rates upon agriculture or upon mines or upon railways?—yet of these, two are among the principal sources of material prosperity and the third is a most potent instrument of it. The system of rating is in many respects inequitable and inappropriate to modern economic conditions; the need for

reform has long been admitted. How, then, can trade recovery be assisted by saving the taxes at the expense of the rates?

Apart from calling for sensational reductions to be effected in ways either wholly unexplained or merely hinted at, the committee make three definite proposals for economizing in the elementary schools—the exclusion of all children under six years of age; the raising of the average number in a class to fifty; and the closing of small schools. It may assist the reader to gauge the combined effect of these proposals if I quote two short tables which have been compiled from the records of an English county authority. The county is fairly typical. In population it is very near the mean of the English counties: there are large rural stretches of country, but slightly over half the inhabitants live in industrial communities of moderate size.

The information summarized in the tables was taken on a certain day in July. On that day the average number of children in attendance was 31.3 in each class or, in terms of roll, 33.3, a number rather larger than that given by the committee as the average of the county, 32.4. The facts as to the size of the individual classes are as follows:—

						Classes.
Average attendance not exceeding 10						35
Average attendance exceeding 10 and not exceeding 20						206
"	"	"	20	"	"	30
"	"	"	30	"	"	40
"	"	"	40	"	"	50
"	"	"	50	"	"	60
"	"	"	60	"	"	70
Total						1,032

The main cause of this great diversity in the size of classes will be apparent from the second table, which refers to the same set of figures. Here the schools are arranged vertically in order of size and horizontally according to the number of classes in each.

		Number of schools, with the under-mentioned number of classes in each.										Total.
Size of school...	Average attendance:	1	2	3	4	5	6	7	8	9	10	
30 or under...	...	20	19	—	—	—	—	—	—	—	—	39
31 to 60	...	9	62	13	—	—	—	—	—	—	—	84
61 to 95	...	2	12	48	3	—	—	—	—	—	—	65
96 to 135	...	—	—	19	42	4	—	—	—	—	—	65
136 to 180	...	—	—	—	13	8	2	—	—	—	—	23
181 to 240	...	—	—	—	1	9	14	—	—	—	—	24
241 to 300	...	—	—	—	—	1	4	1	—	—	—	6
301 to 350	...	—	—	—	—	—	—	4	2	—	—	6
Over 350	...	—	—	—	—	—	—	—	2	1	3*	6
Total number of schools		31	93	80	59	22	20	5	4	1	3	318

The Committee are good enough to remark that country districts present special difficulties in the matter of the increase in the size of classes. They do, indeed! But half these children live in industrial districts. The staffing standards, of which these tables are the outcome, were settled school by school, account being taken not merely of the number of children but of their age range, of the number, capacity, and disposition of the teaching rooms. Under these conditions, to increase the average class by sixteen children, and so to reach the number fifty, over half only of the classes, is a plain impossibility; the educational organization of the schools would be destroyed at a point far short of the figure suggested.

At present the lower limit of compulsory attendance is fixed at five years of age. This particular authority has not availed itself of the statutory power to refuse admission to children between three and five years. The number of children covered by the tables was a little under 34,500, and of these rather more than 4,000 were under five years old. The number between five and six years of age was also rather more than 4,000. The exclusion of all children under six would thus reduce the total to a figure between 26,000 and 26,500. It is also evident that, of the children under

five, about half are kept at home by their parents. In the country districts the exclusion of children under six, with an exception in favour of those already in the schools, would clearly simplify the administrative problem without, in the majority of families, doing the child an injury. In the urban areas, however, of England as a whole the consequences would be far otherwise. The low age limit was obviously settled in relation to the total length of compulsory school life, which forty-five years ago was much shorter than by successive stages it has since become. The upper limit is now fourteen, with exceptions. That it has never occurred to authority to make any readjustment of the lower limit is probably due to the fact that the infants' school was, at any rate, cheap. But the practice of nearly fifty years has had its effect upon the social and economic structure. The means do not exist outside the school for dealing with the children of the mass which lives very near the poverty line. The married woman plays a considerable part in some of our industries. If the children under six are no longer to be admitted to the schools the street must for many of them fill the gap. The moral consequences for that state of things will soon absorb the savings the committee set out to make—and more. If the age of compulsion be raised to six, there must be some option below that age.

There remains the Committee's proposal to close the small schools. To the town dweller a school with a hundred children is a small school, but my second table shows dozens of schools in one county area with only twenty, thirty, forty, or fifty pupils. Throughout England there are hundreds of such schools taking children of all ages, from three to fourteen. These will be more and smaller if the children under six, who are from a fifth to a third of the whole, are excluded. In the towns almost all these schools could be closed without disadvantage. In the country the matter is not so simple. The pulse of social life in the villages is not too robust to-day and the closure of the village school will make it feebler still. A village without a school may be a place where men and women live; it is hardly a community.

There are also the more obvious practical difficulties; the nearest school may be beyond reasonable walking distance; if it is over two miles away, conveyance must be provided. But the chief difficulty lies in the present dual control of educational organization. Nearly all these schools are denominational in character, and, as the law stands, cannot easily be closed if less than thirty children attend them, and cannot be closed at all if there are more than thirty. Rural England may be counted upon to put up a stiff fight for its schools, even if the churches can be reconciled to the change. But that considerable economy could be effected under a policy of closure and amalgamation is certain, and the advantage of the larger school with its better opportunities should in the end compensate for the damage the policy would entail upon the common life of the countryside.

The reduction of 32 per cent., considered by the Committee to be necessary in the national interest in the expenditure on elementary education, cannot be made without reducing teachers' salaries, which constitute not less than 60 per cent. of the whole. But they leave the local authorities with the teachers to face the issue, and presumably, if they can, to agree to the precise amount of the reduction. The present scales, they say, are not universal in their application, and were not imposed by the Government, since the local authorities pay what they think fit. Thirty-five per cent. of the local authorities are reported not to be paying the standard scales of the Burnham Report; it is not explained that all these authorities are still within the terms of the Report, in that they are taking advantage of a proviso which enabled any authority to continue on the provisional minimum scale for a term of three years, and, in special cases, four years, from October 1, 1919. The responsibility of the Government for the standard scales is considerably under-stated. The Burnham Committee was called together by the Minister for Education. The scales, and the schedule of authorities which were to be asked respectively to pay them, were

* One of these schools has thirteen classes.

submitted to the Board of Education and were, in fact, modified at the Minister's request. Before giving his approval, at the end of June last, Mr. Fisher consulted the Chancellor of the Exchequer and put himself in a position to assure the local authorities that if they conformed to the Committee's proposals, as modified on his suggestion, the Government would meet its share of the cost, which would be calculated on the grant formula still obtaining.

The Committee hint a criticism on the scales in that—while there is a provision that, if the cost of living rises to a higher level than 170 per cent. above pre-war cost and remains there for a period of not less than six months, the scales are open to increase—there is no provision for reduction when the cost of living falls, as it has fallen. In spite of the apparent exception, the scales were in fact framed without direct reference to the cost of living. It did not take long in the preliminary discussion to discover that neither the local authorities' representatives nor the teachers were minded to consider a basic scale supplemented by a variable bonus. The authorities were concerned to fix the definite limit of their commitments, while from the teachers' point of view it was necessary permanently to improve rates of remuneration which, in their opinion, had never been adequate in the past. While the discussion of the scales was nearing its close there was simultaneously an unprecedented rise in the cost of living. In February, 1920, the Board of Trade figure was 130 per cent. above pre-war; by September it had risen to 161 per cent.; the next month it was 164 per cent., and there was no evidence that we had reached the peak, which was, in fact, attained at 176 per cent. in November. It was therefore only natural that during September and October the teachers, looking forward to the appeal which they would have to make for the support of their constituents, should ask and should obtain some slight protection against any further serious rise. Nothing in the nature of a bonus was promised: the door was closed, but the key was not turned in the lock. The scales were to have only a short currency—down to 1925, and this was made shorter still by provisions which prevent the generality of teachers from reaching their proper place on the scale until 1923. In circumstances such as these the Committee evidently feel that any reduction there is to be must be brought about by agreement. It would be dishonourable in the Government to refuse any longer to meet their share of the expense entailed by the scales. It would be equally difficult for the local authorities to make an independent reduction without consultation with those affected. It may be that the Committee are right and that the nation cannot afford to pay these salaries—large in the aggregate, though individually modest. But the teacher should not be singled out for reduction. There are other and comparable classes in the State, and all should bear their share.

J. L. HOLLAND.

THE CASE AGAINST COMPULSORY LATIN IN ARTS DEGREE COURSES.

By H. NICHOLSON, M.A., Head Master, Watford Grammar School, ex-Chairman of the Modern Language Association.

THE Report of the Prime Minister's Committee appointed to consider the position of modern languages in the English educational system contained the following recommendation:—"That neither Latin nor Greek be compulsory for an arts degree in any of our universities" (Recommendation 16). In January, 1919, after a careful consideration of this Report at a Joint Session of the Head Masters' Conference and the Incorporated Association of Head Masters, the following resolution was carried by a substantial majority:—"An arts degree should be obtainable by a candidate who has never studied either Latin or Greek." More recently the Prime Minister's Committee on Classics has reported as follows:—"That Latin should be retained or restored as a necessary subject in all arts courses, but that

prose composition should not be compulsory in entrance examinations" (Recommendation XV, 2). When the Classical Report was considered in January last by the annual general meeting of the Incorporated Association of Head Masters, the meeting endorsed its decision of January, 1919, though in slightly different words, viz. "That this association is of the opinion that Latin should not be a necessary subject in all arts courses of the universities." Modern language teachers view this recent recommendation of the Classical Committee with grave misgivings; they cannot but regard it as a reactionary proposal, and they feel that they must record their protest against it. The whole matter was very fully discussed at the annual general meeting of the Modern Language Association, held in Cambridge on January 4, 5, and 6, 1922, and the original recommendation of the Modern Language Committee was endorsed by a large majority.

It is most unfortunate that there should be any sense of antagonism between teachers of the classics and teachers of the modern humanities. After all, both are working for the same ends and by similar methods; both are trying to develop the minds of their pupils by bringing them into contact with the greatest thought of the past as expressed in the world's greatest literature. Whether the authors studied be Homer, Virgil, Molière, or Goethe, their aims are one and the same and their methods closely allied. No one objects to Latin receiving fair and even generous treatment in our schools. As a factor in education and as an instrument of culture its value is recognized on all hands, but it is necessary to lodge an emphatic protest when Latin claims a *special* and *privileged* position, and when it is suggested that it should be made an absolutely essential part of any and every kind of arts degree. Modern language teachers ask merely for equal treatment for classics and modern languages as equal and independent branches of humane letters. They have never attempted to make a modern foreign language compulsory for an arts degree, and they ask their classical colleagues similarly to abstain from all compulsion with regard to Latin and Greek.

In the past an arts degree has usually meant a degree in classics or in history or in some modern European language, usually one of the Romance group, and in such cases compulsory Latin has seldom been a very serious handicap, but we must face not only present-day conditions but the conditions that may obtain in the near future. A degree in arts may easily mean a degree in Oriental, Slavonic, or Semitic languages; it may mean a study of some form of Eastern culture—e.g. the history and literature of India, China, or Japan. Is it reasonable to suggest that any student wishing to take up such a course should be compelled as a preliminary to reach a qualifying standard in Latin? If only our classical friends will be logical enough in their demand for the study of origins, we may expect shortly a demand for Sanskrit for all.

It is urged, of course, that Latin is essential for the proper appreciation of the history, literature, and institutions of any modern European nation; but we need to distinguish carefully between knowledge of the language itself and a knowledge of Latin civilization, which can well be obtained from first-rate translations and books written in English. For almost all purposes, except, perhaps, in the case of the student of Romance philology and the advanced student in medieval history, a knowledge of Roman life and literature gained through English would probably prove quite adequate. In fact, for the average student of literature a knowledge of a classical masterpiece gained from a first-rate translation would probably be more useful than a knowledge gained by spelling out the original text painfully, word by word, with constant reference to a dictionary. It is surely obvious, for example, that a knowledge of Euripides gained from Prof. Gilbert Murray's translations is more valuable to the student of literature than a knowledge of Euripides gained in Greek by the average student who has had a modicum of Greek imposed upon him and who has never gained any real mastery of the language.

In the case of the student of the Romance languages the position is somewhat different. Here a knowledge of Latin is useful, though it is very doubtful if it is as useful as it is thought. For the student of Romance philology *some* knowledge of Latin is essential, though, again, the amount required is usually much overstated; a few dozen well selected words, an elementary knowledge of the verb and the noun, would probably suffice; in any case what is required is *not* the Latin of Virgil and Cicero as taught in our schools, but a knowledge of colloquial Latin and Latin slang. The philological specialist is a rare bird, and he can safely be trusted to get up the modicum of Latin necessary for his work without any legislative compulsion, and we should certainly not frame our degree regulations to suit him. Moreover, the amount of philology required for modern language degrees seems to be decreasing rapidly, more time being thus found for the intensive study of great literature—to most folk a much more profitable and attractive subject. It has been stated repeatedly that, even for the study of French literature, apart from French philology, a knowledge of Latin is absolutely essential. The answer to this is surely that the French have built up for themselves a great reputation by the admirable way in which they teach their children their own language. With them the *lecture expliquée* has become a fine art, and this method involves no reference to Latin. If the French teacher can be supremely successful in teaching the French boy or girl how to write his language and appreciate his literature without reference to Latin, why should not the English student be capable of being taught on similar lines?

For the student of languages *other* than the Romance group, Latin has but little significance. For the understanding of the various philological laws, the sound-shiftings, &c., a few carefully selected words—e.g. the numerals from 1 to 10 and the names of the family relationships—will usually be found sufficient to provide all necessary examples.

Let us now turn our attention to the effect that this recommendation of the Classical Committee, if accepted, will have upon the time-tables of our schools. It is generally agreed that French should be the first language studied. If, in addition to this, Latin is to be demanded of all students who intend to take arts courses at our universities, there will be little room in our schools for a second modern language and no room at all for a third modern language. The average student simply cannot carry three foreign languages. Compulsory Latin, therefore, rings the death knell in our schools of Spanish, Italian, German, and any other modern foreign language.

Another important point is that there are springing up all over the country schools of the new municipal type. In these there is often only one foreign language taught—namely, French. Boys from these schools will soon be matriculating in large numbers, without having offered Latin as a matriculation subject. Are the arts courses of our universities to be closed to them unless they are prepared, at the age of sixteen or seventeen, to abandon their normal studies and devote from six to twelve months to a compulsory study of Latin, so as to reach the qualifying standard required for matriculation? Many who might take good degrees, in English, French, German, modern history, economics, &c., may well refuse to do this, and will either abandon all idea of a university course or perhaps drift over to the science side.

After all, one may well ask what is the value of the modicum of Latin which is to be imposed on all arts students? It is certainly enough to be a serious handicap to the student who has reached matriculation without having studied Latin. It is emphatically not enough to be of any real value to him in university work. One thing is certain—viz. that the small amount of Latin imposed on the student, and usually acquired in the most uneducational way, will leave behind a permanent distaste for anything appertaining to Roman civilization. Every schoolmaster knows what compulsory Greek meant in the old days; he knows how the wretched victim learned his "crib" by heart and worked

up the scraps of Greek grammar selected by his "coach"; he knows with what joy the Greek books were flung aside the moment the boy scrambled through his examination—"an introduction to Hellenic culture," forsooth! Compulsory Latin simply reproduces these conditions; and we shall be told, *ad nauseam*, "Latin must be studied by every student because our whole modern civilization is based upon it." Why this obsession as to origins? Oh, the fatal mesmeric power of these high-sounding phrases! One thing, however, is certain—compulsory Latin will go the way of compulsory Greek, and for exactly the same reasons. For the day of privilege is drawing to a close and in the end no subject will maintain itself in the time-table save by its own inherent worth. Surely Latin can stand on its own feet and face this condition of things.

The point at issue at the moment is whether a satisfactory solution can be reached by facing the whole problem at once in a broad and statesmanlike way, or whether there must be a long, weary, futile struggle, with the end always a foregone conclusion—a struggle, moreover, which can do no good to the serious study of the classics.

PERSONAL PARAGRAPHS.

By the death of Viscount Bryce a most distinguished figure has been removed from the social circles of this country and from the diplomatic world. A native of Glasgow, Lord Bryce was first educated at the High School, where his father was head master, and afterwards at the university. Passing as a scholar to Trinity College, Oxford, he obtained a first class in classical moderations in 1859, and a first class in the final schools in 1861, both in classics and in law and history. He won the Craven Scholarship, the Vinerian Law Scholarship, the Latin Essay Prize, the Gaisford Prize for Greek Verse, and the Arnold Prize for a historical essay. In 1862 he was elected Fellow of Oriel. In jurisprudence and constitutional law he had always taken a keen interest, and was induced to push forward in these studies by the remarkable success of his Arnold prize essay on "The Holy Roman Empire." This essay, published as a book in 1864, won immediate appreciation, not only in England but in Europe and the United States. In 1867 he was called to the Bar, and in 1870 was appointed Regius Professor at Oxford, where he remained until 1893. In the meantime, however, he was elected to Parliament as a supporter of Mr. Gladstone in 1880. In 1892 he became Chancellor of the Duchy of Lancaster, and in 1894 was promoted to the Presidency of the Board of Trade. He was in opposition from 1895 to 1905, when, on the Liberals again coming into power, he was appointed Chief Secretary for Ireland. In 1912 he became Ambassador to the United States, and it has been said that no British Ambassador has carried away from America greater esteem and appreciation than the schoolmaster's son. He will be especially remembered in education circles for his notable work as chairman of the Royal Commission on Secondary Education.

* * *

ON the recommendation of the Secretary for Scotland, acting as vice-president of the Committee of Council on Education in Scotland, the King has been graciously pleased to appoint Mr. George Macdonald, C.B., F.B.A., LL.D., as Secretary to the Scottish Education Department, in room of Sir John Struthers, K.C.B., LL.D., retired.

* * *

EDUCATION has lost one of her greatest university teachers and a notable reformer by the death of Sir Henry Jones, professor of moral philosophy in the University of Glasgow, after an illness lasting several years. Born in Denbighshire, he worked at his father's bench as a shoemaker in his youth. Like many Welsh boys, he put forth incredible efforts under most difficult conditions to gain knowledge.

After some years of private study he sat for the entrance examination for elementary teachers at the Normal College, Bangor, and was rewarded by being placed at the head of all candidates for the Queen's Scholarship in the kingdom. After two years' experience as an elementary teacher he won a scholarship to Glasgow University, and there he became the pupil of Jebb, Nichol, and, above all, of Edward Caird. Graduating with first class honours in philosophy in 1878, he was awarded the Clark Fellowship, as holder of which he continued to work for four years more in the University of Glasgow as assistant to Prof. Caird. In 1882 he became lecturer in the University College of Wales at Aberystwyth, and on the opening of the University College of North Wales at Bangor in 1884 he was appointed its first professor of logic and philosophy. He held this post for seven years, establishing a reputation as a devoted and successful teacher as well as an eloquent speaker. In 1891 he was appointed to the chair of logic and metaphysics in the University of St. Andrews. Three years later Prof. Caird's departure for Oxford opened the way to his transference to Glasgow as professor of moral philosophy. Sir Henry Jones has largely influenced the development of Welsh education. He was the originator of the movement for the "penny rate," which all county councils in the Principality now levy in aid of the University of Wales, and he served on more than one Royal Commission. A couple of years ago he was appointed Gifford Lecturer at Glasgow, and owing to his threatened early death Mr. Balfour postponed his own delivery of the Gifford lectures in order to make way for Sir Henry Jones. Sir Henry Jones was an LL.D. of the University of St. Andrews and a D.Lit. of the University of Wales. He was elected a fellow of the British Academy in 1904, and was knighted in 1912, and only a few days before his death he received the Insignia of the Companion of Honour from the Prime Minister on behalf of the King, and the medal of the Cymmrodorion Society.

* * *

MISS ELEANOR DOORLY, head mistress of the Twickenham County School, has been appointed head mistress of the King's High School, Warwick. Miss Doorly took the B.A. degree of the University of London in 1905 with honours in French and English, and she is an accomplished linguist, speaking Italian, French, and Norwegian. After three years' research work in Italian modern history, she was awarded the M.A. degree on a thesis on "The Influence of English Diplomacy in Italy, 1859-1861." She has lately published a short social history of England, entitled "England in her Days of Peace," which has been adopted as a text-book in the Canadian schools by the Government of the Dominion. In addition to these intellectual achievements, Miss Doorly possesses the highest professional qualifications. She was trained as a teacher at the University of Bristol, and afterwards held the position of history and English specialist at the North London Collegiate School from 1907-1915, under Mrs. Sophie Bryant, D.Sc., Litt.D., whose testimony to Miss Doorly's unusual powers led to her appointment as head mistress of the Twickenham County School six years ago.

* * *

MISS SOPHIE HARE, who is retiring from the School for the Daughters of Missionaries at Walthamstow Hall, Sevenoaks, is one of the distinguished band of educationists who were educated under Miss Buss and afterwards served under her on the staff of the North London Collegiate School for Girls. Miss Hare was appointed Principal of Walthamstow Hall in 1901, and during the twenty-one years of her rule she has seen a remarkable growth, both in the size and in the educational achievement of the school. It would be impossible to speak too highly of Miss Hare's work, and of her influence for good on the girls left under her charge during the critical years of their lives.

* * *

WE regret to record the death of Prof. W. Lewis Jones, M.A., late professor of English language and literature at

the University College of North Wales, Bangor. Prof. Lewis Jones was educated at Queen's College, Cambridge, and was awarded the Members' Prize Essay by the university. During the tenure of his professorship he published several books bearing on literary subjects, and was recognized as an authority on Geoffrey of Monmouth. He had also contributed articles to "The Dictionary of English Literature." He resigned his professorship in 1917 on account of ill health.

* * *

THE deepest regret will be felt by all interested in education at the death of Sir John D. McClure, head master of Mill Hill School for the past thirty-one years. No master could have wished for a better colleague and friend, and no boy for a better head master. We reserve for our April issue a more adequate appreciation.

ONLOOKER.

TOPICS AND EVENTS.

ASSOCIATION OF DIRECTORS AND SECRETARIES FOR EDUCATION.—The thirty-first annual general meeting of the Association of Directors and Secretaries for Education was held on January 13 and 14 last at the County Hall, London, when Mr. Percival Sharp, the Director of Education for Sheffield, was elected President, and delivered the annual address. He alluded to the Education Act of 1918, which "gripped the imagination and profoundly stirred the spirit of the country," with its far-reaching consequences in the development of a saner citizenship, and a better attitude towards certain vital questions, particularly those relating to industrial problems, still, alas! far from being realized in many of its more important aspects. We are told, continued Mr. Sharp, that the education given in the elementary schools is not satisfactory in its results. There is little doubt that there is a tendency to extend the curriculum and include subjects which would be quite legitimate if the school life of the children could be lengthened. The true function of the school is not vocational, but to instruct the children soundly and to train the children so that, in body, mind, and soul, they are prepared in some degree for the stresses and strains of life. In 1870 there were committed to prison nearly 10,000 children under sixteen years of age, and to reformatories and industrial schools nearly 3,000, a total of nearly 13,000, when the population was only 22,000,000; and in 1919, with a better understanding of the needs of children, the number committed to prisons under sixteen years of age was twenty-five, together with 3,916 (in 1920) committed to industrial and reformatory schools, a total of nearly 4,000, with an increase of population to 37,000,000. These figures show one of the results of education which must not be overlooked. "We need," says Mr. Sharp, in conclusion, "efficient education for the War of Peace that is upon us more than ever we did."

FARM TRAINING AT HORSHAM.—We learn that the sum of about £3,000 has been bequeathed to Christ's Hospital by the late Mr. R. T. Prowse, of Howton, Bushey Heath. It is stated in the will that the money, although intended for the general purposes of the institution, should be applied more especially to the successful working of the scheme of farm training at Horsham designed to fit the boys for life in the Dominions. Under this scheme, which commenced last summer, the boys receive training in all departments of farm life, including, in addition to general agricultural work, dairy work, pig rearing, horse management, and poultry farming. The idea has been warmly commended by many Dominion authorities, who have shown themselves willing to take practical advantage of the plan, and signs are not wanting that the scheme will prove a successful experiment.

RAMBLES IN LONDON.—"We want to awaken your interest by a series of Rambles over London, each to recall some event of the past or memories of some famous men whose names the world cherishes." This is the opening sentence of a prefatory note to the first of a series of booklets, entitled "London Rambles," by Mr. Frank Green. (4d. each. Messrs. E. J. Burrow & Co., Ltd., 93 Kingsway, London, W.C.2.) Number 1, "A Ramble in Dickens-Land," contains a suggested walk, which can be covered in less

MODERN CORRESPONDENCE COLLEGE.

PRINCIPAL :

ARTHUR McALISTER, B.A. (Cantab).

TRIBUTE TO M.C.C. TUITION.

13 Brynymor Road,
SWANSEA.
20/1/22.

Dear Mr. McAlister,

As you know from the telegram, I was successful in passing the examination for A.Mus.T.C.L.

I wish to thank you for the preparation I received, and the care which was taken in correcting my work.

The marks I gained—in each case out of 100—were:

Art of Teaching 85
Rudiments of Music 89
Harmony 80
Counterpoint 94
History of Music ... 78

which represents 85.2 per cent. of the total marks; a result which reflects the highest credit upon your instruction, particularly in view of the fact that I was ill during the examination, and was unable to do my best work.

I think that any one who works through the full Course with you stands a first-class chance of passing it the first attempt, as was the case with me.

I am,

Yours sincerely,

BASIL RADFORD.

P.S.—You have my permission to publish any part of this letter with my name.

A FORECAST.

"Severn House,"
28 Severn Street,
LEICESTER.
Nov. 17th, 1921.

Dear Mr. McAlister,

I feel it is a duty on my part to write and express my complete satisfaction with the Correspondence Course for Matriculation which my son is taking with you.

The lessons are so admirably graded, and the corrections and hints are so lucid and clear as to be of the greatest assistance to the student.

The fact that my son only began with the Course in July and that he feels confident of success in January, speaks volumes for your training.

I shall be pleased for you to make any use you think well of this letter.

Yours most truly,
WALTER J. BUNNEY,
F.R.C.O., L.R.A.M.

THE RESULT.

"Severn House,"
28 Severn Street,
LEICESTER.
Jan. 23rd, 1922.

Dear Mr. McAlister,

I have just received the official intimation that my son has been successful in passing Matriculation.

The fact that he only began his training with you for this Examination in July, 1921, and has been successful in January, 1922, speaks for itself.

I wish to thank you very warmly for the kind interest you have taken in him, and for the excellence of the methods which have produced such a happy result. Believe me,

Yours very sincerely,
WALTER J. BUNNEY,
F.R.C.O., L.R.A.M.

A.R.C.O.

SUCCESES.

1921 4
January, 1922 2

A student who failed in 1914 (under other tuition) writes as follows:—"I received *double* the marks for Counterpoint that I got in 1914. I did not experience any difficulty this time with the Counterpoint. Your system of teaching it has made interesting to me a subject which before I detested. I cannot express my belief in your system too strongly. My Counterpoint until I came to you was awful, and I despaired of ever being able to write fluently and tunelessly."

L.R.A.M. and A.R.C.M.

SUCCESES—April, 1921.

201 Ilkeston Road, NOTTINGHAM.

than an hour, in the Strand district, so rich in associations with the famous author. These links with Dickens are pointed out in the booklet in an interesting and informative way. Neatly bound, well printed, illustrated, with blank pages left for pupils' own observations and sketches (so that they may complete their own books), this series should appeal strongly to teacher and pupil alike. As an effort to increase a justifiable pride in the wonderful city, it deserves commendation.

CAMBRIDGE LOCAL EXAMINATIONS.—The first instalment of the class lists of the Cambridge Senior and Junior Local Examinations, held in December last, shows that 4,660 candidates were entered at centres in Great Britain and Ireland, and that there were in addition 6,113 candidates for these two examinations at overseas centres. Of the candidates at home centres 563 boys and 700 girls passed in the Senior Local Examination, 32 boys and 5 girls obtaining first class honour certificates. The conditions for complete exemption from the previous examination were satisfied by 90 boys and 47 girls. In the Junior Local Examination 640 boys and 47 girls satisfied the examiners, 11 boys and 2 girls being placed in the first class. The class lists of overseas candidates will be issued later.

EDUCATION GUILD SUMMER HOLIDAY COURSE.—The Education Guild propose to hold a Holiday Course this summer in the nature of a Conference of Teachers on the Dalton Plan. The course will be held at Clifton, Bristol, for ten days immediately following the breaking-up of the schools—that is, from Saturday, July 29, to Tuesday, August 8. The Conference will consider the Dalton Plan and its application to various types of schools and subjects, and ample time will be allotted for questions and discussion with teachers who have practical experience of the system. Further particulars of the Course will be announced later, but all information with regard to it may be obtained from the General Secretary, The Education Guild, 9 Brunswick Square, W.C.1.

HEALTH WEEK ESSAY COMPETITION.—The Health Week Committee appointed by the Royal Sanitary Institute, who inaugurated, with the approval of the London County Council Education Department, a competition among London elementary-school children for the best essay on "Habits and Health," have just issued a list of fifty prize-winners. 109 essays, selected by head teachers in the various schools, were submitted to several well known educationists acting as examiners. In announcing the prize-winners the Committee wish to express their appreciation of the way in which the elements of hygiene and healthy living are taught in London schools.

LECTURE CONCERTS.—Miss Clarisse Speed's lecture-concerts are doing much to cultivate musical appreciation both in adults and children. To know what is good and to ensue it are worthy aims of instruction of all kinds, and Miss Speed's programmes of talks with musical illustrations certainly assist towards this end. These lecture-concerts were first undertaken at the request of the musical adviser of the London County Council, and they have been attended by more than three thousand people, including a number of parties from schools. The fifth lecture-concert, with orchestra, will be given at Kingsway Hall, Kingsway, W.C.2, on Saturday, March 18, at 3 p.m., and the programme arranged is most inviting. Tickets may be obtained at the Hall, or from Miss Speed, 25 De Quincey Road, Tottenham, N.17.

MONTESORI SOCIETY CONVERSAZIONE.—The Montessori Society, London, have invited all their members to a *Conversazione* on Saturday, March 4, from 4 to 6.30 p.m. The *Conversazione* will be held at the hall in the Mary Ward Settlement, Tavistock Place, W.C.1. Miss Mildred Swannell will give an address at 4.30 p.m.

MORAL EDUCATION CONGRESS.—It has been agreed to hold the third meeting of the International Moral Education Congress at Geneva from July 28 to August 1 this year, and that the Geneva Committee shall invite about fifty contributors to send in papers. The British contributions being fixed at five, the Council have provisionally allotted three to history teaching and two to the subject of practical service. Sir Robert Baden-Powell has consented to present one of the last-named. To the United States five papers have been allotted. Communications on the subject from readers should be addressed to the Hon. Secretary, Mr. Frederick J. Gould, Armorer, Woodfield Road, Ealing, London, W.5.

TEACHERS' BIBLE STUDY WEEK.—This year's Bible Study Week

will be held at Oxford from April 15 to 22. Lectures will be delivered on "The Progressive Revelation of God in the Old Testament," "The Influence on Israel of Early Civilizations," "The Approach to the Gospels," and "The Life of our Lord on Earth." The inclusive fee for the course varies from £2. 18s. to £3. 18s., according to the accommodation required. Alternatively, lecture tickets for the week or day can be obtained, at 10s. and 2s. respectively, from the Hon. Secretaries, B.S.W., c.o. Miss Bevan, 5 Rawlinson Road, Oxford, to whom all inquiries should be addressed.

CONFERENCE OF MANUAL TEACHERS.—The twentieth annual conference of the National Association of Manual Training Teachers will be held this year at the London Day Training College on April 18 and 19. A public meeting will be held on April 18 at 3 p.m. An exhibition of practical work of all kinds is to take place on both days, a special feature of which will be the section devoted to private exhibits, i.e. individual models as "aids" to the teaching of mathematics, science, geography, &c. The Conference Secretary (Mr. F. Carpenter, 75 Chestnut Grove, S.W.12) will be happy to answer inquiries with reference to the conference.

AN EASTER VISIT TO HOLLAND.—Last year the Civic Education League organized an Easter visit to Belgium, and this year a similar trip to Holland is being arranged. It is proposed to leave London on April 15 and to return on April 27. Visits will be paid to Rotterdam, The Hague, Leyden, Haarlem, Amsterdam, Utrecht, and possibly Dordrecht and Middelburg. Attention will be given to the chief social and economic institutions of the country, and members of the party will have special facilities for first-hand contact with the work and personnel of these institutions. Education and municipal, commercial, and political life will be studied in this manner. Mr. Alexander Farquharson will be in charge of the educational arrangements throughout. Any-one interested in civic studies may join the party, and early application should be made to Miss Margaret Tatton, Secretary, Civic Education League, Leplay House, Belgrave Road, S.W.1.

ESPERANTO CONFERENCE.—L'Institut J. J. Rousseau is calling a conference, to be held at Geneva on April 18 to 21, on the question of the teaching of Esperanto in schools. The matter will be discussed in detail, and past experiments and future action will be considered. All communications with reference to the meeting should be sent to L'Institut J. J. Rousseau, Taconnerie 5, Genève.

STUDENTS FROM OVERSEAS.—According to the figures of the Universities Bureau of the British Empire there are 4,470 students from the overseas dominions and foreign countries in the universities and university colleges of the United Kingdom, made up of 1,187 from Africa, 781 from America, 1,576 from Asia, 645 from Europe, and 281 from the Pacific (Australasia).

PRIMARY SCHOOL NOTES.

A Disappointing Document.

THE Report of the Geddes Economy Committee upon expenditure on education is frankly a disappointing document. An expectant press had led the general body of the public to anticipate suggestions which would alike reduce the cost and increase the efficiency of our educational system. The Report includes under the head of national expenditure money which is derived from local sources, and in consequence it is difficult for ordinary citizens to ascertain accurately the amounts expended upon the various sections of education. On one page of the Report, for example, the provisional estimate of the Board of Education on elementary schools for the year 1922-23 is given as £36,724,000. On another page the estimated cost of elementary education per child, per annum, is given as £12. 7s. 6d., including a charge of £8. 8s. for the teaching service. The teaching cost, again, of elementary education is estimated at £44,975,000; and it is clear that the proposal to limit this amount to £36,000,000, *vide* page 3 of the Report, is one which assumes the right to criticize the action of local authorities in relation to their expenditure. As the reference of the Economy Committee was to consider "reductions in the national expenditure," it would

A WISE ECONOMY

A wise economy is a duty laid upon everyone at the present time.

Happily, this necessity has arisen when the prices of paper and materials are at a lower point than they have reached since 1916; consequently at the present time stocks can be replenished at most favourable prices.

The E.S.A. have just issued a revised price list which shows very large reductions in the prices of all paper goods, and in addition to their well-known, high grade standard makes, they are offering "Good enough" Exercise Books, Foolscap Paper, &c., at remarkably low prices; but although the prices are exceptional, all writing materials are guaranteed as efficient.

EXERCISE BOOKS.

Superior Paper. Exceptional Value.

Price 28/- per gross.

Containing 80 pages; bound in limp watered silk cover. The books are supplied in different colours and in various rulings.

EXERCISE BOOKS.

Bound in strong paper covers.

80 pages, 23/- per gross.

40 pages, 13/- per gross.

We hold a huge stock of Exercise Books in all qualities and prices, ready for immediate delivery.

PAPER.

Foolscap paper from 3/3.

Examination paper, 2/9.

Sermon paper, 1/7.

All per ream 480 sheets.

CATALOGUES.

STATIONERY CATALOGUE,

giving particulars of Exercise Books, Drawing Books, Examination Paper, and every School Requisite will be sent free on application.

At lowest current prices.

HOLBORN RING BOOK.

A stiff cloth cover with nickel plated rings affixed to cover that open and close quite easily by pulling one ring apart to open, and snapping it together to close.

Covers only from 1/9 each.

Guides, per set of 5, 6d.

Paper to fit, 2/4 ream.

FILING CASES WITH CORDS.

A cloth case with two flanges inside eyeletted, with two holes through which cords are passed to hold several Exercise Books or loose leaf paper.

Covers only, from 1/3 each.

Guides, per set of 5, 6d.

Paper punched to fit, 2/4 ream.

FLAT FILES.

Files, from 5d. each.

A strong Manilla cover with a flange inside containing two brass pins, paper with punched holes are placed on the pins and kept in place by a metal fastener.

FOLDING DESK No. 181, 18/6 each.

Do. Fitted with folding Bookshelf underneath, 23/6 each.

GEOMETRY BOXES.

Exceptional Value. Strong Metal Box of Instruments, containing Brass Pencil Compass and Compass Lead; Metal Set Square (45°), Metal Set Square (60°); Boxwood Rule, 1/16 in., 1 in., cm., and mm., Protractor marking on the reverse; Lead Pencil, H, and Piece of Rubber.

1/4 per box; 6 dozen boxes, 1/3 per box.

A TWO PENNY PENCIL for a PENNY.

The "Holborn" Round Red Polished Real Cedar Pencil. 12/- gross. H, HB, and B degrees.

PENS.

The E.S.A.'s series of Pen Nibs comprises a large selection of patterns all specially designed for School use.

From 1/9 gross. Samples post free.

appear that its members were driven by the difficulty of their task to swell the total by adding the expenditure of local education authorities.

* * * * *

A Helpful Proposal.

THE criticism of the existing formula for assessing school grants is one which is thoroughly justified, and represents the view of those who have to baffle with the problem of calculating government grants. If the Geddes Committee are able to secure a simplification of the methods of assessment they will have justified their existence. It is perhaps unfortunate that inquiry was not also made into the manner of conducting statistical data from the schools, in view of the fact that there is unnecessary waste of the time of teachers in filling up returns more or less useless.

* * * * *

A Lost Opportunity.

THE growing conviction among administrators of education that a complete reorganization of the existing relations between primary and secondary schools is desirable, no doubt made them keenly expectant that the problem of overlapping in education would have received some attention from the Economy Committee. There is little immediate prospect of building new secondary schools, and any extension of higher education would appear to be dependent upon a wiser use of the facilities already in existence. The prospects of utilizing the senior departments of elementary schools for lower secondary school work have never been critically examined by a representative body. School managers, as well as teachers, are beginning to realize the uselessness of maintaining an expensive inspectorate to do work which is already efficiently performed by local authorities, and that the time is opportune for the absorption of the inspectorate within the teaching profession, where, as model teachers, they could apply their ever-changing precepts. The provision for transferring scholars of exceptional ability from the primary to the secondary schools has never been more unsatisfactory than it is to-day, when there are thousands of suitable children unable to secure the higher scholarship desired by their parents. That these points have been completely omitted from the Report of the Economy Committee tends to prove that business men in a hurry are not necessarily wiser than ordinary citizens.

* * * * *

Useless Proposals.

THE proposed exclusion of children below the age of six years from State-aided schools will be met with determined opposition from the agricultural and industrial classes. Leaders of the churches have strong convictions about the inculcation of religious principles in the years of infancy; and all primary State-aided schools impart such instruction carefully and conscientiously. It is unfortunately still necessary for many mothers to work for their families, especially since the havoc of the war, and if their children are shut out from the schools such parents will be cruelly handicapped. The overcrowding of classes up to an average of fifty scholars per teacher is perhaps the most impractical proposal in the Report. The recommendation could not be entertained by anyone who had the slightest experience of school administration. It is causing intense bitterness among parents, and cannot fail to intensify the distinctions between social classes which have, unfortunately, arisen since the close of the war.

* * * * *

Teachers and the Report.

THE opposition of teachers to the drastic "cuts" recommended in the Report is intensified by the fact that they have already submitted to three separate reductions in the application of the Burnham scales of salaries. The Report ignores the fact that these scales were based upon the normal standard of living; and that contracts have been concluded, or are being concluded, between the Government, teachers, and local authorities to settle the problem of salaries until 1925. Political action has already been taken by sections of teachers, who find the Geddes Report a very useful instrument in enlisting the active support of parents who take an interest in the education of their children. One important body of teachers proposes to call out all members of the profession from participating in such voluntary work as War Savings Associations. Members of Parliament are being served incessantly with protests against the proposals of the Economy Report; and the long view in the profession appears to be that the reaction against it has already set in.

CORRESPONDENCE.

TEACHERS AS TRADE UNIONISTS.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—Will you permit me to make a protest against certain statements contained in the last paragraph of Occasional Notes in your February issue?

It is misleading to say that "the Head Masters' Association have declared for trade unionism."

Trade unionism is now a very complex system, but I take it that latterly its most characteristic development has been its willingness to put the welfare of some particular industry, or class, before that of the community, and it has thereby lost much of the influence which it previously possessed. Because certain associations have refused to admit to membership those whose views are in conflict with those of the vast majority of the members, it is not only unfair but absurd to label them as trade unions.

Trade unionism has an armoury of weapons, both offensive and defensive, and I suppose one or more of the same types of weapons are used by every organized body, yet every such body is not a trade union, nor need its policy in the main have the remotest likeness to that of trade unionism as a whole.

The I.A.H.M. have, after many years of hard work, reached an agreement with the local authorities (who, in a sense at all events, represent the community), which has been ratified by the Board of Education, as to the minimum salary which, in the interests of education, should be paid to head masters. Some authorities are recalcitrant and offer lower salaries. The I.A.H.M. and the I.A.A.M. point out to candidates for these posts that they are doing their best to render this agreement nugatory. Anyone is at liberty to accept such a post—it is not suggested that stern measures will be taken against him—but he would plainly be out of place in an association which has made an agreement with the terms of which he is unwilling to abide.

Religious bodies, clubs, and even masonic lodges have been known to refuse membership to individuals. Have they all declared for trade-unionism?—I am, yours, &c.,

COMMON SENSE.

THE MODERN TEACHING OF GEOMETRY.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—Sir Thomas Heath, in his recently published book on Greek Mathematics, quotes Isocrates as recommending the study of geometry and astronomy on the grounds that "the study of these subjects trains a boy to keep his attention fixed and not to allow his mind to wander; so, being practised in this way and having his wits sharpened, he will be capable of learning more important matter with greater ease and speed." This view of the object of teaching geometry was held in his country until the end of last century; unfortunately it was forgotten that the Greek system included a previous training in practical geometry, and this was almost entirely neglected in English schools. Hence the Roman view of geometry gained the upper hand (to quote Sir Thomas Heath again, "Theoretical geometry did not appeal to the Romans, who only cared for so much of it as was useful for measurements and calculations"); Euclid was abolished and every teacher was free to teach geometry in his own way.

This freedom had at first the effect of reviving interest in geometrical training, but, after twenty years, has led to something like chaos. In the opinion of many teachers and examiners modern teaching has not increased the purely geometrical knowledge of pupils and altogether fails as an improver of the mind or as a sharpener of the wits. It is suggested that it would be beneficial if a recognized sequence of propositions were adopted. As long ago as April, 1912, Prof. Bryan suggested, in the *School World*, that Euclid's sequence should be restored; in the following number of the *School World* several teachers of mathematics gave their opinions on this proposal. Opinions were equally divided on

(Continued on page 146.)

DUSTLESS AND HYGIENIC SCHOOLS

USE

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the EASTER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little and is easily applied. Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods—which is even of greater hygienic importance.

"Florigene" has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

MANUFACTURED BY

FLATTERS & GARNETT, Ltd.,
309 OXFORD ROAD (Opposite the University), MANCHESTER.

the advisability of a recognized sequence, but those in favour of a sequence were not in favour of Euclid's.

I am now writing to suggest that a committee representative of teachers and examining bodies should be invited to draw up a sequence. If this committee agreed on a sequence it would probably be widely adopted and thus provide a common basis for geometrical teaching, whilst still leaving freedom to the individual teacher to use his own methods. In the hope that means may be found to appoint such a committee, I am soliciting the publicity of your columns.—Yours, &c.,

W. E. PATERSON.

GOOD HONOURS DEGREES.

To the Editors of *The Journal of Education and School World*.

SIRS,—You are probably aware that, in order to satisfy the demand of the Board of Education for the reduction of expenditure, local education authorities are making inquiries into all claims to a "Good Honours Degree" among teachers in secondary schools. A second class honours degree is not to be recognized as "Good Honours" without official evidence of special distinction, e.g. of being placed in the highest division of the second class where the list is so divided, or of a high place in the official order of merit where a list in order of merit is published.

As a result of the demand for official evidence of this kind, graduates of Oxford University who have taken good second classes, at present labour under a great disability, as there is no subdivision of classes and no official order of merit in their university.

In some subjects, e.g. English language and literature and history, the standard of the Honour school at Oxford is recognized to be higher than that at most other universities. Yet, on account of this lack of official evidence, a good second at Oxford will now rank lower than a good second at Durham or Bristol.

I CANNOT OFFER ANY DISCOUNT ON NEW BOOKS

but I can offer you a
prompt service for any
books you may require.

Mr. JOHN DAVIS

(Successor to Mr. THOMAS LAURIE),
13 Paternoster Row, London, E.C.4.

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

¶ Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W.1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

Surely the University of Oxford stands in a strong enough position to point out this discrepancy to the Board of Education, and to save its graduates from suffering under such disabilities for the mere lack of evidence on paper?—Yours, &c.

Oxford Honour School of English
Language and Literature.

Girls' High School, Nuneaton.

January 27, 1922.

THE KINEMA IN EDUCATION.

To the Editors of *The Journal of Education and School World*.

SIRS,—May I express my sympathy with the attitude expressed in the paragraph (on page 750 of the December issue) entitled "The Kinema in Education"? As you very pertinently observe, "It savours rather of the attitude of the ostrich to take an agnostic pose and trot out the old yarn about damage to the eyesight and appealing only to the eyes."

This much debated question of the usefulness of the kinema in education has been ended by the recent experiments conducted by the Columbia University authorities on 500 New York school children. These tests showed that pupils taught by motion pictures and oral instruction passed examinations twenty-two per cent. higher than those instructed orally alone. Moreover, the lessons were not only more vividly learned, but were retained in detail for a much longer period.

It is good to have this question now definitely settled by so impartial an authority, and it is to be hoped that some of the energy which has been so fiercely displayed in fighting against the introduction of the kinema will be diverted into useful educational channels.—Yours, &c.

From EDWARD ARNOLD & CO.'S List.

With Introduction by

SIR HENRY NEWBOLT, LL.D., D.Lit.,
Chairman of the Committee on the Teaching of
English in England.

ENGLISH NARRATIVE POEMS. 184 pages. With notes. Limp cloth. 2s. 6d.

A collection of eleven works by great poets, exemplifying the development of the narrative form.

ENGLISH BALLADS, and Short Narrative Poems. With notes. 192 pages. Limp cloth. 2s. 6d.

A representative selection from the earliest times to the present day, including poems by Kipling, Newbolt, Noyes, &c.

NEW BOOKS IN MATHEMATICS AND SCIENCE.

Elementary Algebra. By C. O. TUCKEY, M.A., Assistant Master at Charterhouse. In Two Parts. Each Part, with or without Answers, 3s. 6d.

The Journal of Education.—"Altogether the book provides a very sound and sensible course of instruction in algebra for the secondary school."

A Geometry for Schools. (Embodying the recommendations of the Board of Education for Teaching Geometry.) Edited by A. C. JONES, M.A., Ph.D., Senior Assistant Master at Bradford Grammar School. In Three Parts. Part I, Geometrical Concepts, Postulates, and Propositions 1-7, 2s. Part II, Propositions 8-61, 2s. 6d. Part III, Propositions 62-90, 2s. 6d. Complete with Answers, 6s. 6d.

Elements of Natural Science (Part I). By the Rev. W. BERNARD SMITH, B.Sc., Assistant Master at Marlborough College. 5s.

A Commercial Arithmetic. By E. SANKEY, Head Master of the Derker Council School, Oldham. In Two Books. Books I and II, 112 pages, limp cloth, 2s. each. Answers separately, 1s. for each book.

Electricity and Magnetism. By C. E. ASHFORD, M.A., Head Master of the Royal Naval College, Dartmouth. Third and Revised Edition. 4s. 6d.

Preliminary Practical Science. By E. SANKEY, Head Master of the Derker Council School, Oldham, and J. PARKER, Science Master at Derker Continuation School. 2s.

HISTORY.

A General History of the World. By OSCAR BROWNING, formerly University Lecturer in History in the University of Cambridge. 700 pages. 8s. 6d. net. Also in Three Parts, with separate indexes, 3s. 6d. net each. Part I, Ancient History; Part II, Medieval History; Part III, Modern History.

Prof. HEARNshaw writes:—"I place Mr. Browning's 'History of the World' first on the list of books recommended to any students in the 'Outlines of World History' course. It is the only book written by a sound historian that covers the whole ground of the course."

A Social and Industrial History of England. By Dr. F. W. TICKNER, late Lecturer at the Islington Training College. 8s. 6d. In Three Parts, 3s. 6d. each.

"Rarely has there appeared in small compass a more comprehensive and enlightening book on the rise of the English people to their industrial and social supremacy. Dr. Tickner possesses a style both deliberate and distinctive. When he takes up in turn the Medieval and the Age of Chivalry, we might well be reading scenes from historical romances, so brilliantly does he write."—*The Boston Evening Transcript*.

The Last Century in Europe, 1814-1910. By C. E. M. HAWKESWORTH, Assistant Master at Rugby School. 526 pages. 7s. 6d. net.

England in the Nineteenth Century. By Sir CHARLES OMAN, K.B.E., M.P. 3s. 6d.

Outlines of European History, 1789-1914. By G. BURRELL SMITH, M.A., Assistant Master at Repton School. With Maps. 3s. 6d. New Edition, beginning at the French Revolution.

Scenes from European History. By G. B. SMITH, M.A., Assistant Master at Repton School. 3s.

SINGING-CLASS MUSIC.

A series of entirely new Songs for Treble Voices, with Piano Accompaniment and Sol-fa, in addition to Staff Notation.

UNDER THE GENERAL EDITORSHIP OF

THOMAS F. DUNHILL, Professor at the Royal College of Music.

All the Songs have been specially composed for this series.

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

III.

HISTORY.

By Prof. F. J. C. HEARNshaw.

I.

THERE are probably few students of history whose class work has fallen within the limits of this twentieth century who can realize the deathly dullness of the Victorian teaching of the subject. Text-books were everything. And such text-books—"Little Arthur," Mrs. Markham, Collier, Curtis! Unrelieved, for the most part, by a single illustration, unassisted by a solitary map or plan, immeasurably remote from any original source of information, they retold the unauthentic anecdotes collected or invented by their predecessors, passed judgments according to their prejudices, and left their readers with an abiding sense of the unrealities of both the persons and the events of which they had been treating. History lessons in class consisted in the setting and the hearing of so many pages of the text-book. Sometimes whole paragraphs had to be committed verbatim to memory; at other times a summary knowledge of the section sufficed. The teachers of history had, as a rule, made no study of the subject since their own school-days; they rarely knew anything whatsoever about it beyond what the text-book told them; their interests, if they had any, lay in wholly different directions. They neither used nor felt the need of any supplementary aids.

II.

A change began to manifest itself in the teaching of history during the closing years of Victoria's reign. It may be attributed partly to the permeating influence of the school of university historiographers, of whom Freeman and Seeley were the leaders. They emphasized the vital connexion between history and politics, and made it clear

that, since "the roots of the present lie deep in the past," no permanent progress in the future is to be looked for except along historical lines. But the influence of the school of Freeman and Seeley was reinforced by the conviction of far-sighted educationists, such as Prof. H. L. Withers, that the training of the young democracy in the principles of citizenship necessitated the laying of a broad and sound foundation of historic knowledge. Hence they laboured until they secured the inclusion of history in the regular curricula of all schools, colleges, and universities. Their accomplishment of this task gave rise to a demand for specialist teachers of history. Specialist teachers organized themselves as the Historical Association in 1906—a body which now numbers some five thousand members. The fruitful activities of the Historical Association, in particular its discussions in committees, at annual gatherings, and through branch meetings, have been among the causes which have resulted in a complete reformation of historical text-books on the one hand, and, on the other hand, the introduction and development of many valuable supplementary aids to the teaching of history. We proceed to note the more important of these, but before doing so we may pause to remark that these aids remain strictly "supplementary." They do not supersede the text-book; still less do they render careful class teaching unnecessary. It is still of prime importance that each pupil should have in his hand an outline narrative of the course of events which signalized the period that is being studied; it is still indispensable that the teacher should, with verbal summary and blackboard outline, with question and illustration, drive home the information and suggestion furnished by the text-book.

III.

The zealous teacher in search of means of vitalizing his subject will probably turn first to certain *material* (as distinct from merely *modal*) aids, some or all of which are sure to be available. These material aids are themselves true original sources of history, authentic relics of antiquity, embodiments of past ages and vanished ideas, human documents eloquent to those who have eyes to read their silent speech. The history teacher instinctively feels that nothing will so certainly lend reality to his story of remote ages as the exhibition of the actual handiwork of the old toilers. The student is brought into direct and personal touch with the primary authorities which no commentator or interpreter can wholly misrender or obscure. Such primary aids are (1) archaeological remains still *in situ*; (2) relics of antiquities collected in museums; (3) original manuscripts or, failing these, facsimiles of them; (4) contemporary literary remains; (5) authentic portraits and drawings, or reproductions thereof. A few words respecting each must suffice.

(1) In a country, like Britain, of old and varied civilization, a neighbourhood is indeed unlucky if it can discover no relic of its earlier inhabitants. Prehistoric man has left scattered over all the land numerous hill forts, burial mounds, "pilgrims' ways," and bridle tracks; the Romans have bequeathed to a distant posterity monuments built for eternity—walls, gates, camps, villas, temples, one solitary Christian church, and, above all, roads innumerable and unmistakable; the Anglo-Saxons have left their mark mainly on the villages with their fields, woods, and commons, wherein the skilled eye can still often detect traces of the old communal cultivation; the Danes are discoverable principally in a nomenclature which is a rich and largely unexplored region of historical information; with the Normans begins that inexhaustible and priceless wealth of architecture which, in cathedral and castle, monastery and hall, parish church and manor house, enables the student to follow, almost year by year, the mutations of the civilization of this island during the past eight and a-half centuries. The alert teacher will be quick to supplement the text-book sketch of each period as he comes to it, by an excursion to such relics of the period as may be within his reach.

(2) The historical museum is the appropriate and invaluable depository of such small relics of antiquity as have happily escaped the ravages of time. There are few regions that have not got some sort of a museum, although the method both of classification and exhibition in many of them leaves much to be desired. Too often is a museum reduced, by generous donors and weak custodians, to the rank of an old curiosity shop, or even of a lumber-room. In the well equipped historical museum should be found prehistoric implements, Roman coins and pottery, Saxon weapons and utensils, Norman armour, and the varied remains, steadily growing fuller as the generations elapse, of the post-Norman ages. In these collections preference should, of course, be given to local specimens; but it is a great mistake to limit the exhibition to purely local finds. No single locality can provide a complete display. Every locality should be ransacked, the place of origin, of course, being indicated in the case of each specimen. When authentic specimens cannot be procured, good models are useful. These are not so readily procurable in England as they were in pre-war Germany, where F. Rausch, of Berlin, had a wonderful series of "Modelle zur Veranschaulichung vaterländischer Kulturgeschichte."

(3) Ancient and medieval documents are among the most effective means by which the differences between earlier ages and our own can be illustrated and impressed upon the imagination of the pupil. From the nature of the case, originals of these are rarely available for school or college use. All, however, who are within reach of the Public Record Office in Chancery Lane, London, should arrange to take their senior scholars to the wonderful collection of notable manuscripts which are there on permanent exhibition. In many municipal boroughs and not a few manorial villages it should be possible to arrange for occasional inspections of the borough records, the court rolls, or the parish registers. For the most part, however, dependence will have to be placed on facsimiles, and, fortunately—so great is the demand for these—there is a good and improving supply available. The Palæographical Society's magnificent plates are beyond the financial compass of any but the wealthy. Messrs. Johnson & Jenkinson's "English Court Hand," with its companion atlas of forty-four fine reproductions, is a storehouse of valuable material. But most serviceable for general use are the "Facsimiles of Medieval Documents," issued by the Bodleian Library, Oxford, and the "Facsimiles of Historical and Literary Autographs," published by the Trustees of the British Museum. "Magna Carta" has been separately reproduced by Messrs. Cassell & Co. and Messrs. Chatto & Windus.

(4) The literature of the period should never be neglected as a supplementary aid to a comprehension of its history. The two studies, indeed, should be carried on in the strictest co-ordination. They are truly but two branches of one and the same theme. The ultimate purpose of the investigation of events is to discover the causes to which they were due, and among these causes human ideas rank high. These same ideas are manifested in literature, and it is often a nice question to decide whether a great book (e.g. Locke's "Civil Government" or Smith's "Wealth of Nations") has moulded or merely reflected the contemporary course of affairs. Together with the literature, which should be used as an aid to the study of history, should also be noted the present-day newspaper. It provides frequent pegs on which to hang appropriate history. The present writer, when he was teaching in his last school, availed himself of a spare period every Monday afternoon to discuss with his class the topics of the preceding week. The topics regularly produced an imperative demand for history; the history demonstrated its value by assisting in the elucidation of the topics.

(5) Last, but not least, art and handicraft should be called in to provide material aids to the teaching of history. Historical portraits are most efficient means for reducing abstract personalities to concrete personages. The National Portrait Gallery is open for all who can visit it; but teachers

need to be cautious in taking their classes there. The temptation is to see and to show too much at once. The mind becomes bewildered, and the memory overcharged, by the wealth and variety of the portraiture. On the whole, facsimiles of the required portraits are to be preferred for class work, and teachers should know that every picture has been reproduced and is readily procurable in the Gallery at a reasonable price. Mr. Emery Walker, 16 Clifford's Inn, moreover, has a fine collection of historical portraits drawn from many sources. The Clarendon Press have published three volumes of them, with descriptive biographies by Mr. C. R. L. Fletcher. Besides portraits of persons, pictures of buildings are valuable aids to history. Not even the cheap familiar post card should be despised. It is possible to make an album of picture post cards which is of the greatest interest and the most real use to a student of history. Historical wall pictures of various kinds are issued by Messrs. Arnold, Cassell, Horace Marshall, Longmans, Philip, and also by the Art for Schools Association and the Educational Supply Association.

IV.

So much for what I have called *material* aids, that is to say, supplements to the text-book which supply new and important data for historical study and critical judgment. But besides these material aids there are what may be termed *modal* aids, that is to say, adjuncts to the text-book method of instruction—supplements to the outline narrative not so much by reason of the new information which they supply as by reason of their novel manner of presentation. Half a dozen may here be named and touched upon briefly. They are (1) source books; (2) books for reference and for additional reading, among which should be included a few select historical novels; (3) atlases and wall maps, illustrative of history; (4) time charts, whether extemporised on the blackboard, constructed more permanently on specially prepared sheets, or procured ready-made from one of the several publishers who produce them; (5) lantern slides and cinematograph films; (6) historical dramas and pageants. On most of these topics teachers who wish to keep abreast of the times should consult the leaflets and *History*, the quarterly magazine of the Historical Association, and also, if they can obtain it, the *Historical Outlook*, the monthly organ of the American Historical Association.

(1) The source-book method of instruction was first developed in the United States. At the start it was intended that the text-book should be eliminated and that each pupil should build up his own narrative indirectly out of the raw material provided by the editor. This wild scheme, however, was soon abandoned as its early absurdities displayed themselves, and the source books were reduced to their proper function (more humble but not less useful) of supplementing the text-book by means of extracts from important original documents. Several series, English and American, are available for teachers. The fullest are the five volumes of Messrs. Horace Marshall & Sons' "Illustrative Histories," the nine volumes of Messrs. Blacks' "English History from Original Sources," and the nineteen volumes of Messrs. Bell's "Source Books of English History."

(2) For books of reference the reader should consult Leaflet No. 20 of the Historical Association on "School Historical Libraries." This might be supplemented for more recent books by Miss Eileen Power's "Bibliography for School Teachers of History" (Methuen, 1s. 6d.), or the excellent catalogue of the historical library of the Bootham School at York. For select historical novels, Prof. Firth's illuminating paper issued by the Historical Association should first be read; in this are enumerated the more extensive but less discriminating guides compiled by Dr. Baker, Mr. Nield, and others.

(3) It is now universally recognized that the close co-ordination of history and geography is vital. The serious study of history should not be commenced until the physical features of the region involved in the study are entirely

familiar. When this familiarity is achieved, historical maps (whether hand maps or wall maps) are serviceable for the marking of political developments. Historical atlases are published by Messrs. Bell, Johnston, Longmans, Macmillan, Philip, and the Oxford University Press. Series of wall maps are procurable from Messrs. Johnston, Messrs. Philip, and the Oxford University Press. There are also various German sets of wall maps, of which the ten maps of the Spruner-Britschneider Series are the most generally useful.

(4) The time chart is now regarded as an almost indispensable adjunct to the apparatus of the history classroom. Several firms (e.g. Messrs. Arnold, Messrs. Philip, and the Oxford University Press) publish charts of one sort or another; but the growing opinion among educationists is that the only chart really valuable is the one made by the teacher (or pupil) himself. An admirable discussion of the whole question, with numerous examples and illustrations, is given in the Historical Association's Leaflet No. 50, by Miss H. M. Madeley.

(5) The lantern and the cinematograph seem destined to play an increasingly prominent part in history teaching. Large collections of slides are possessed by some educational authorities (such as the London County Council) and by some public bodies (such as the Royal Colonial Institute and the Victoria League). For those who wish to buy, such firms as Messrs. Newton & Co. (37 King Street, Covent Garden) or Messrs. Philip & Son (32 Fleet Street) have large selections. To apply the cinematograph in education is not so easy. Nevertheless, so strong is the appeal which it makes to the infantile mind, that it is felt that it must somehow be pressed into the service of pedagogy. How this may be accomplished is the problem which the Educational Kinematograph Association (22 Great Portland Street) has set itself to solve. A number of films suitable for display in schools can be hired from the Macmillan Educational Film Co., Ltd., 32 Charing Cross, S.W.1.

(6) The use of the drama and the pageant as a means of vivifying history has been powerfully advocated in a recent address by Mr. Hilaire Belloc before the British Drama League (December 29, 1921). The principles which Mr. Belloc preaches have been applied in practice by the Village Children's Historical Play Society, and in particular by one of its most active members, the Hon. Mrs. Matheson. Nowhere has the dramatic method been more vigorously and successfully attempted than in the region controlled by the Canterbury and District Education Board, from whose energetic officer, Mr. R. H. Stevens, particulars can be obtained.

Although lack of space prevents the giving on the present occasion of any detailed account of any of these supplementary aids now available for the enthusiastic teacher of history, it is hoped that enough has been said to show how numerous and varied are such aids, and how, by means of them, the study of history can be converted from a drudgery to a delight.

NEW IDEALS IN EDUCATION CONFERENCE.—The Eighth Annual Conference of New Ideals in Education will be held this year from April 17 to 24 at Stratford-on-Avon, and will take as its subject "Drama and Education." This subject has arisen from last year's conference, when several speakers dealt with the educational value of the drama. The Conference, while fully recognizing the value of the drama to the spectator, wishes to emphasize the importance of a more general participation in dramatics at the present time, when acting has fallen largely into the hands of professionals. With this end in view, speakers will describe their experiments in schools and elsewhere in the attempt to awaken a more active interest in the drama. In one or two instances actual plays will be performed. Other addresses will deal with such aspects of the drama as its history and its moral significance in the cinema as well as in the theatre. An ambitious programme, in which well known teachers, poets, dramatists, and others will take part, has been arranged. Forms of application, on payment of the Conference Fee of £1, and further information can be had from the Secretary, Miss M. B. Syngé, 24 Royal Avenue, Chelsea, S.W.3.

THE FUTURE OF EDUCATION IN • IRELAND.

THE coming of the Irish Free State in the South and the establishment of a Northern Parliament in Belfast close the long period of British control of education in Ireland, and inaugurate a new era. While it must be admitted that under the Union many excellent and far-reaching reforms have been introduced, it cannot be denied that they have left Irish education as a whole much behind that of Great Britain and other countries, and that a difficult problem is bequeathed to the new Irish governments, a problem which admittedly requires immediate handling, and on the successful treatment of which the future welfare of the country greatly depends.

The fundamental principles of modern education are the same in all countries. Every civilized country realizes that it must have primary, secondary, technical, and university schools and colleges with appropriate curricula and suitable co-ordination. But in every country there will also be characteristic differences, arising from historical, social, economic, and other national distinctions. It has been the fashion too much in the past to treat Irish education like English or Scotch, and, when Ireland refused to react to the treatment, to stop short at half or make-shift measures or to do nothing at all. Mr. Macpherson's education bill is a striking example of this. In Ireland, as contrasted with Great Britain, the country as a whole has attached the greatest importance to religious control, whereas England and Scotland have decided in favour of a secular State system freed for the most part from denominational influence. The United Kingdom Parliament, in dealing with Irish education, has always maintained that secular education must be on secular lines free from religious tests, and, theoretically, such has been the system in Ireland, but in reality the schools and universities have never been without a denominational bias. The one exception, for special reasons, has been technical and agricultural instruction.

There is no desire in this article to go into the question of religious control, or otherwise, of schools, but only to state the facts of the present time, and these are, among others, principally two: first, that from top to bottom we have education carried on practically in watertight religious compartments. We have three universities—one predominantly Church of Ireland, one Catholic, and the other Presbyterian. Our secular intermediate system is worked by Roman Catholic and Protestant schools definitely known and recognized as such. And our primary system has a managerial system which may almost be described as minutely denominational. Are the new Irish Governments going to recognize this religious basis as at present existing? If not, how are they going to change it and what reforms do they propose to introduce? The other great fact is that British predilection for a secular State-controlled system of education has prevented the organization of an Irish national system of education. Ireland, rightly or wrongly, was always suspicious that State reforms meant the loosening of religious control; reforms have been blocked; and Ireland has no proper system such as we find in other European countries. There is the primary system; there is the intermediate system; there is the technical system; and there is the university system; and, so far as these come under State control, they are worked separately and on different principles. Anomalies abound.

The most anomalous is the intermediate system. Hitherto controlled by an independent board, appointed by the Lord-Lieutenant, it was worked on the principle of payment by results, having at its disposal a sum of, roughly, £80,000 a year, partly the interest of a million pounds of the funds of the disestablished Irish Church and partly local taxation money; of this only about £48,000 reached the schools, the rest being spent in administration. Recognizing that this was inadequate, Mr. Birrell secured a new annual grant of

£40,000, but, as payment by results was antiquated, without any change in the method of paying the old grants, he based the payment of this grant on a new principle, and kept it under Government control. The more recent Duke grant and the interim grant have each been distributed on further new and different lines, while a separate grant is paid by the Department for the teaching of science and drawing, also on another and entirely different principle.

Leaving the universities on one side, in Great Britain grants have been made partly by the State and partly by the local authority accompanied by local control. In Ireland primary and secondary education have received no local grants and have therefore had no local control. Technical instruction has been worked very satisfactorily in Ireland on British lines, but no religious question has been connected with its administration. So we have had the National Board for primary education, the Intermediate Board for secondary education, the Department with an agricultural committee for agricultural education, and a technical committee for technical education and also for the science and art and manual instruction work in intermediate schools and primary training colleges; and we have a managerial system practically synonymous with a religious system of management for national schools, some public school endowments, and a large number of privately managed schools for secondary education, and local committees for technical instruction. To unify all these diverse arrangements, to co-ordinate education from bottom to top, to satisfy new demands without offending established interests—to do these things is a large and complex problem requiring a clear and definite aim, a sound grasp of proper methods, and an abundant use of tact. The problem is soluble, but not all at once. At present passions run high, political tempers are excited, calm and clear thinking is difficult.

What aim does Ireland set before herself in education? Her educational systems having been backward, she needs, above all things, to make up leeway and with as little delay as possible to evolve the best possible educational arrangements. She will, naturally, incline to a local patriotism and will insist on what she calls an Irish education, introducing and emphasizing the learning of the Irish language, Irish culture, Irish literature, and so forth. This must be expected, but will it be the best policy for Irish education? Time will tell, but the authorities must remember that it is Ireland herself that will pay for mistakes, even if they are the result of disinterested enthusiasm. The Minister for Education in the Irish Free State, Mr. Finian Lynch, and the Chief Executive Officer for Primary Education, Mr. Bradley, have already issued instructions making the teaching of Irish compulsory in all national schools and encouraging it in the intermediate schools. In the national schools immediate steps are being taken to have Irish taught or used as a medium of instruction for at least an hour a day where there is a teacher competent to give instruction.

The National Board, now stripped of executive authority, will remain for the present to advise the Government how far this new step may require modification to suit the needs of the minority who may, for sufficient reasons, object. For the forthcoming intermediate examinations next June new rules have been introduced encouraging Irish studies. In the English papers, questions in the history and geography section will be set in such a way that full marks may be obtained on answers to questions relating to Ireland alone; in the honour papers in history and historical geography a candidate will be able to obtain 50 per cent. by answering questions relating to Ireland; and candidates will have the option of answering papers in all subjects in Irish or in English.

Here, then, is a definite policy. The question will at once be asked, Is it sound? Its object, we are told, is "to strengthen the national fibre." One can imagine that Matthew Arnold might have suggested that in Ireland the national fibre is already sufficiently strong and that Ireland rather wants to be brought more into contact with the fibre of other nations; he might say she is already too insular

and too much cut off from European culture and ideas, and he might further inquire whether, as a matter of fact, the Irish language and the other things to accompany it have in themselves the proper qualities for strengthening the national fibre in the right way. It would be difficult to answer these questions off-hand. The Government must determine the policy on their own responsibility, and probably only experience will decide whether they are right or wrong. There is no doubt a large minority who will object to this policy, and the Government would be well advised to give their views careful and sympathetic consideration.

If we turn to the North of Ireland, we find the Minister of Education, Lord Londonderry, saying in no uncertain tones that he entirely objects to this policy. He is on no account willing to allow the Irish language to be used in the intermediate examinations, except in the papers on Irish itself. The questions in history and geography are to be in accordance with the rules set out in the intermediate programme, and the teaching of Irish in national schools in Northern Ireland is to remain, as before, quite optional. Here is a fundamental divergence of view. The North looks to the ideal of education hitherto encouraged throughout Ireland; the South wishes to introduce a different ideal based upon the teaching of the old Irish tongue. If North and South are intending to push their ideals to the point of mutual exclusiveness, so that they will become more separated instead of being more united, Ireland will suffer, whichever side is right. For the moment North and South are divided from one another; is this to continue? Certainly few sane people desire permanent partition which is bound to be injurious to Ireland herself. Two kinds of education in open rivalry, if not hostility, cannot be an advantage to either party. Everyone can see that.

The Irish Registration Council for International Teachers have passed a unanimous resolution that they should be continued in their work for Ireland as a whole, and in many other respects—technical instruction, for example—Ireland has been quite successful as a unit for education. It is at present too early to see whether these two ideals will find a path of reconciliation or will agree to work side by side with mutual recognition of each other's aim, the North offering more scope for the teaching of Irish within its borders, and the South relaxing the rigour of its proposals for the rest of the country. English will remain the current language of Ireland, certainly for the present generation, and it is a matter for educationists to consider whether compulsory Irish, side by side with English, will provide Ireland with the education best suited to her present or her future needs.

The references above show that, alike in South and North, the methods of administration will be changed. Education will pass from the hands of nominated and unpaid Boards and will become a department of State. This was foreshadowed in the unanimous report of the Molony Committee, and was an integral part of Mr. Macpherson's Education Bill. Indeed, it wrecked the Bill; as an educational department then was regarded, rightly or wrongly, as likely to interfere with the religious control of the schools. Both in the North and the South ministers of education have been appointed, and these will be responsible to Parliament for the administration of education. The Northern ministry has gone further than the Government in the South, and it is possible already to see the whole Northern system in outline. Educational services were transferred to the Northern Parliament on February 1, and the Minister of Education has already appointed a Secretary for the education department, Mr. L. McQuibban, and three chief executive officers who are among the most experienced officials in Irish education. Mr. W. A. Houston, who was Assistant Commissioner of Intermediate Education, takes charge of secondary education; Mr. N. Bonaparte Wyse, one of the Secretaries of the National Board, takes charge of primary education; and Dr. H. Garrett, who was Senior Inspector of Education under the Department, takes charge of technical instruction. With the appointment of advisory or consultative committees, the

whole framework of administrative control, as recommended by the Molony Committee, would be complete.

In the South, where, in contrast with the North, there has been a radical change of political parties in control of the Government—in fact, a complete revolution—matters have not progressed so far or so fast. One reason is obvious. Whereas the North starts with a clean slate, in Dublin all the old offices of education still continue in existence, and although in theory the Government can commence *de novo*, in practice it is bound to consider the interests of the officials who have been working in them for many years. Another reason is that there is as yet no Southern Parliament in existence, and the present Government is only provisional. At the moment there are, as a matter of fact, two Ministers of Education, one, Mr. Hayes, who is Minister for Dail Eireann, and the other, Mr. Lynch, who is Minister for the Provisional Government. Eventually there will not be more than one Minister. One chief executive officer has been appointed, Mr. Bradley, who is in charge of National Education and directly responsible to Mr. Lynch, but his appointment is not at present permanent, as he is only on loan from the National Health Insurance Commission. But it is clear that the National Board and the Intermediate Board which have controlled education in the past will immediately disappear, and that soon an administrative system similar to that in the North will be established.

(To be concluded.)

FOREIGN AND DOMINION NOTES.

FRANCE.

How the Senate voted 200,000 francs to celebrate the Tercentenary of Molière's birth, how in the schools an hour was devoted to his memory, how the halls of learning resounded with his praises, how the journals served up again the anecdotes about him—all this is now history. But the whole year is glorious for France. If it opened with the Tercentenary of the poet Molière, it will close in December with the Centenary of the man of science Pasteur. Again, as M. Victor Bérard in his speech to the Senate reminded his hearers, this year is the centenary of a notable achievement as well as of two notable births:—"Entre Molière et Pasteur, le monde saura partager les hommages de son admiration et de sa reconnaissance. Mais, entre eux aussi, peut-être le monde voudra-t-il remettre en sa vraie place un autre Français dont notre peuple ne semble plus mesurer à leur grandeur le travail et la gloire. Il y aura tout juste un siècle, en septembre 1922, qui, par la main de Champollion, le génie de la France tira brusquement ce rideau des hiéroglyphes qui, depuis trois mille ans, séparait de nos civilisations méditerranéennes les profondeurs de la vieille Egypte et de la plus lointaine Asie." In 1922 France is thinking of Molière, of Pasteur, and of Champollion the Younger. In 1932 Germany will be honouring Goethe; by which time we hope that the sympathies of men will be able to go out towards her as they now go out towards France. It were fit so; for both Goethe and Molière belong to mankind.

We have been in terror lest some lady reader, armed with "Les Femmes savantes," should attack us for having concealed that Molière was not quite sound, not "modern" enough, in his views of women. It was at extravagance and display in the learned lady that he railed:—

"De son étude, enfin, je veux qu'elle se cache,
Et qu'elle ait du savoir sans vouloir qu'on le sache."

And, in so far as he was unsound, Mme Jeanne P. Crouzet-ben-Aben, who writes the "Bulletin de l'Enseignement secondaire des Jeunes Filles" month by month in the *Revue Universitaire*, would have converted him in a trice. She stands for identification—the same course of instruction for girls as for boys. The French women, in general, are making headway, as figures prove. Thus, in the Faculty of Letters at Paris there are 1,277 women students, of whom 902 are French, whereas in 1914 the total number was only 509; so in the other Faculties. In the Sciences the increase is from 260 to 552; in Medicine, from 213 to 682; in Pharmacy, from 69 to 171; in Law, from 58 to 510. In all, there are to-day

3,192 *étudiants* in the University of Paris, as against 1,209 six years ago—a noteworthy fact. It was not all evil that the female descendants of Clitandre inherited from his mother-in-law.

In our January number we suggested that Anglo-Saxons should be indulgent in the matter of dialect. Academic France is disposed to regard such indulgence towards the *patois* superciliously, to brand it as *provincialisme*. But Provençal is taught in the *lycées* of Aix, Marseille, Toulon, and Avignon. Comes M. Inizan, moreover, and contends that Bas-breton, "a true language, the old language of the Kelts, which has its grammar, its literature, its artists, its bards," should be fostered in schools. As to the various English and American dialects, we would have all tolerance for them; we would not cultivate them artificially, looking forward rather to the fusing together of them into one richer, stronger, nobler English, as clear and harmonious in its sounds as in its message.

When we wrote last year in our September number about the threat to modern languages, we described the whole business as a French quarrel. Yet, as a sort of jocund Freemasonry exists between the modern linguists of France and those of England, we report that the former are satisfied with the results of Round 1. The Minister, M. Léon Bérard, put to the Conseil supérieur seven questions, and it was in these that the menace lurked. The Conseil, in its answers, recommends the creation in *lycées* and *collèges* of two forms of instruction: an *enseignement classique gréco-latin* and an *enseignement classique à base de français*; or, as we might say in English, of a Classical and a Modern Side. The "cycles" of the Reform of 1902, and the injurious detachment then introduced of literary from scientific instruction should be abolished. On the Classical Side, says the Conseil, one modern language should be compulsory and another optional; on the Modern Side two modern languages should be compulsory; and on both Sides the second language should be begun as soon as possible. What would your modern linguists more? The next move lies with the Ministry. We, for our part, can await it with expectant interest, yet without exhibiting a partisanship that might be taken to imply a hostility to classical studies. *Suum cuique*—to each child the fitting discipline of mind!

GERMANY.

Your German teacher is a trade-unionist. Let us explain this business of trade-unionism as clearly as may be; for which end of clearness we must introduce the German terms. In Old Germany, before Kaiser Wilhelm retired, working men had their trade-unions (*Gewerkschaften*), each representing a trade interest, whilst teachers were grouped for the defence of their interests in various associations (*Lehrervereine*), locally isolated and differing in respect of the order of teachers composing them. The teacher being a civil servant (*Beamter*), these associations could often put useful pressure on the Government served. When the Republic was proclaimed, the civil servants, seeing themselves imperilled, formed a great league, *der Deutsche Beamtenbund*. Soon the trade-unions, to increase their power, also made combinations: there arose what are called the *Spitzenorganisationen*. A *Spitzenorganisation* is an organization which, if complete, would have three columns (*Säulen*) of support—an *Arbeitersäule*, or working men's column, an *Angestelltenäule*, or column of employés (clerks, shop assistants, etc.), and a *Beamtenäule*, or column of civil servants. Is it not obvious that such an organization could exercise mighty force in the State? Of the *Spitzenorganisationen* the two chief are: *Der Allgemeine Deutsche Gewerkschaftsbund*, or General German Trade-union League, made up of disciples of Marx; the foes of Capitalism; and *Der Deutsche Gewerkschaftsbund*, or German Trade-union League, which stands for morality, Christianity and nationalism, and among the 2½ millions of whose members are representatives of the German-National People's Party (*Deutschnationale Volkspartei*), the German People's Party (*Deutsche Volkspartei*), and the Democratic Party (*Demokratische Partei*; German politics, we remark incidentally, are unintelligible unless the actual German names are used in treating them, and not loose translations). Now you will learn what the teacher gets for involving himself in all this tangle. The Marxian organization, lacking at present a *Beamtenäule*, is making overtures to the *Beamtenbund*, in whose 1½ million members are included at least half the teachers and other civil servants of Germany. If the *Beamtenbund* comes to terms with *Der Allgemeine Deutsche Gewerkschaftsbund*, the teacher who is a member of it—we are concerned here only with teachers—becomes a Marxist or must quit the League. Evangelical teachers' unions are being advised to cast in their lot with the rival *Spitzenorganisation*, the German

Trade-union League (*Der Deutsche Gewerkschaftsbund*); moreover, at least three other smaller *Spitzenorganisationen* are short of *Säulen*, or columns of support. Pray imagine the plight of a German teacher whose religion urges him towards one organization, whose politics towards another, whose personal interests towards a third. Germany is learning that it is easier to group individuals than to harmonize convictions, and that the further the process of grouping is pushed the greater is the surrender of individual conviction required. That is why, for example, it is hard to unite the Christian sects into a Christian Church.

(i) Progress has been made with new arrangements for the training of teachers. In Saxony the disestablishment of training colleges (*Seminare*) has been begun; in Thüringen it begins at Easter. The teachers will receive their general training in a higher school, to the standard of the leaving examination (*Abiturientenexamen*); their professional training in pedagogic Institutes connected with a university or with a technical or commercial *Hochschule*, the Institute for Thüringen to be at Jena.—(ii) On January 1 the German-Austrian Lehrerbund joined the German Lehrerverein.—(iii) The Alps are being "filmed" for educational purposes.—(iv) There is a tendency to economize by increasing the hours in school of teachers; thus, at Leipzig the Revolution gave them 28 hours instead of 30 hours—they are to return to 30 hours.—(v) Uniform shorthand (*Einheitskurzschrift*) is a project of the Imperial Government; the Gabelsberger and Stolze-Schrey schools have agreed in a proposal which will be submitted by the Central to the various State Governments.—(vi) In Saxony many of the disestablished *Seminare* are being converted into *deutsche Oberschulen*, secondary schools of the new type, giving German culture in place of classical. At Dresden-Plauen the old *Seminar* is to be put at the disposal of the *entschiedene Schulreformer*, the Radicals of school reform, for an experimental establishment.—(vii) At München there died lately, aged seventy-six, the celebrated Germanist, Hermann Paul, once Professor in Freiburg i. Br. Among his best known works are "Prinzipien der Sprachgeschichte," "Mittelhochdeutsche Grammatik," and "Das deutsche Wörterbuch."

UNIVERSITIES AND SCHOOLS.

WALES.

At a meeting of the Court of Governors of Cardiff College, held on Thursday, February 9, a draft supplemental charter, submitted by the Council, in accordance with the recommendation of the Royal Commission on university reconstruction, was approved. Principal Trow, in introducing the charter, stated that the main fundamental change in the original charter was due to the establishment of the National School of Medicine in connexion with the college. By the provisions of the supplemental charter, the Board of Medicine has been given larger powers, in many respects equal to those of the Council, and therefore the faculty of medicine differed fundamentally from the other college faculties. During the discussion on the charter, an attempt was made to transfer the departments of anatomy and physiology from the jurisdiction of the college senate to that of the faculty of medicine, but it failed because of the strong objection of Principal Trow to the proposal.

The question of the reduction of grants towards university education was discussed, and a strong resolution of protest against the proposed reduction was unanimously carried. The Welsh colleges are, in a peculiar sense, the training centres in Wales for the professions, industry, commerce, the Christian ministry, and teaching, and, therefore, any diminution in their financial resources will vitally affect the welfare of the community. The efficiency of the colleges will inevitably be impaired if the present university grants are diminished, and all new developments, however important they may be, will be rendered unpracticable. The withdrawal of the promise by the Treasury, to provide a pound for every pound raised for approved university education, is certain to have a most disturbing effect on new benefactions towards university education, and as at the present time there are several important appeals for subscriptions being issued, the situation cannot be regarded as anything but serious. The Swansea University College has also passed a resolution of protest.

The prospects of success for the scheme drawn up by the joint committee on religious education in the schools are not just now very great. No one doubted the sincerity or the excellence of the intention of the committee, while the scheme which was drawn up

possessed some admirable features. It was welcomed by all in the first instance because it was a sure indication that the old time rivalry and jealousy between the church and nonconformists were gradually disappearing, and that at last it was possible to work harmoniously in the domain of education. In this respect the publication of the concordat is a new and important event in the history of Welsh education, and it is impossible to believe but that, whatever may be the fate of the present recommendation, ultimately much good will result from the co-operation between the religious leaders of Wales. At the moment, however, there is much diversity of opinion as to the practicability of the scheme in the different counties. Some, such as Carnarvonshire and Anglesey, have accepted it without any reservation. The Rhondda authority, who have a scheme of their own, on the other hand, have rejected it; Monmouthshire and Newport have accepted it with certain important amendments, so that it will be seen that it is not by any means probable that the concordat will secure anything like general agreement, which means that it cannot be put into operation. But its success ultimately must depend on the goodwill and support of the teachers. They will naturally examine very closely any proposals which might in any way affect their freedom, and it has been clear, all through the public discussions on the question, that they are anxious lest the adoption of the scheme might result in the imposition of a religious test. The danger is a real one, and the anxiety of the teachers is therefore fully justified. This is probably the main reason why the joint conference between representatives of the N.U.T. and the teachers rejected the scheme by a large majority in spite of its approval by Sir James Yoxall.

It appears, therefore, that the concordat for the present, at all events, is practically dead. It should also be stated that opposition to the scheme was forthcoming from several prominent Churchmen as well as from Roman Catholics. The head masters and head mistresses of the secondary schools have also been invited to discuss the scheme with its promoters, though it was primarily only intended to apply to the elementary schools. In the majority of the secondary schools there is ample provision for religious education, so that it seems to be a doubtful policy to originate controversies which might do more harm than good. So far, secondary education, even in Wales, has not been embroiled in these religious disputes, and therefore it would be wise to hesitate before deciding on any course of action which might originate them.

SCOTLAND.

As was generally expected, Dr. George Macdonald, the Under-Secretary of the Education Department, has been promoted to the secretaryship vacated by Sir John Struthers. Though Dr. Macdonald has not always been very popular as representative of the Department in Scotland, teachers will wish him well in his new appointment and look forward to a maintenance by him of the fine tradition created by his two predecessors. It is a real advantage to him that he brings to the post not merely a great reputation as a scholar and an administrator, but a close connexion with the teaching profession through his father, who was successively rector of two great Scottish academies. It is a happy omen for his future as secretary that he is to make his head-quarters Edinburgh and not London. The somewhat strenuous relations of the Education Department with the Scottish Office and with Parliament have hitherto been allowed to stand in the way of this common-sense transfer, and teachers and authorities having important business with the Department have been compelled to go down to London or be content with an interview with the Under-Secretary in Edinburgh. Now the main office will be in Scotland, and it is not improbable that most of the London staff, at present scattered over a number of places, will be reassembled in Edinburgh, and only a skeleton crew remain in London to keep Scottish education in touch with Scottish administration in general.

The discussion of Circular 44 still goes on, but the fury of criticism has somewhat abated. Teachers seem to be realizing that ample protest has been made against the separation of secondary and non-secondary sections of pupils at the age of twelve, and that the really important thing now is to make sure that teachers get the share in the conduct of the new qualifying examination which the circular proposes for them. Schemes have been propounded by teachers or by authorities in several counties, and more are in preparation. It is obvious that there is to be no lack of variety among them. In one area, it is already agreed that the examination for the county is to be managed by a board consisting of two secondary and two primary head masters and

the executive officer, with the district inspector acting as assessor. In another, the teachers have asked for, and are likely to get, complete control of the examination through a system of district boards representing the various teaching interests. The main question still being raised concerns the part to be played by a county examination and its relation to the more individual task of selecting pupils for different courses of the post-qualifying stage. The control examinations instituted by certain authorities during the last two years dispose teachers to be critical of county examinations of a uniform character conducted under the auspices of the authorities. They suspect that the transfer of the examination from the Education Department to the authorities may mean less freedom rather than more. In connexion with this matter of professional self-control, the interesting announcement is made that the Research Committee of the Institute, who have been busy trying to establish standards in the essential work of the primary school, intend to publish a book on "Standards in Composition, Spelling, and Arithmetic at the end of the Primary Course." This book, it is announced, will gather together the results of the inquiries already made and include a considerable amount of new material. If it fulfils expectations the difficulty of knowing and maintaining standards in the qualifying examination should be substantially reduced, and the claim of the teachers to be able to guarantee a satisfactory level of work without external control made much stronger than it is at present.

The Geddes "Cut."

Scottish teachers have followed with somewhat painful interest the good fight put up by their professional brethren south of the border against a ruthless economy at the expense of the schools, and have done their best to help by approaching their members of Parliament and keeping a rather unsympathetic public informed as to the effects of a "cut" on the national well-being. By the system of equivalent grants, which fixes the main disbursement of public money for Scottish education at eleven-eighths of English expenditure, the proposed "cut" of sixteen millions in England means a "cut" of two millions in Scotland. It is not yet possible to say whether any "cut" is likely to be made or what its effects will be—except that they will be disastrous—but it seems probable that the publication of the Geddes report will bring the education authorities more fully into line with the teachers than they have come so far. It is plain that if the tax-payer is to get relief the Scottish rate-payer certainly will not. The backward rural authorities who have been tempted to think that a reduction of salaries would be a good thing are beginning to discover that it would mean an increase rather than a decrease of rates for them, and that they would likely fare much worse than their urban fellows. This is all to the good if it brings all Scottish educators into effective opposition to a course of action contrary to the traditions of the people.

The education authorities, exploring all possible ways of economy, have been asking themselves why they should be compelled to go on bearing the burden of social services which are not properly educational in character, like the feeding of necessitous children during strikes. The Glasgow authority, who have been specially subject to attack for "extravagance" in paying their teachers too well, have taken the opinion of counsel in order to discover the exact extent of their obligations in these respects. The case submitted was that of a parent who could get work but refused work because it would make him a strike-breaker. The two eminent lawyers to whom the matter was referred stated that, in their judgment, the statute did not entitle a parent or guardian who was able to earn wages at his own trade to throw the burden of the maintenance of his children on the rate-payers. They did not think that the authority was concerned with the question of whether the parent was justified in refusing the available work. In a later opinion, one of the referees put forward the view that the function of the authority was not to prevent the occurrence of neglect and its consequences, but to take steps to remedy them when made aware of their existence. This opinion has been challenged by the labour members of the authority, but it is evident that, until an actual decision of the law courts is got on the point, it is likely to have very considerable influence on the procedure of all the authorities. The chairman of the Lanarkshire authority, who were specially affected by the miners' strike, has since been paraphrasing counsel's opinion by saying that they had no obligation to give boots and clothing to anyone, that their obligation was to deal with cases in which they found children unable to take advantage of the educational facilities provided because they lacked boots and clothing. Whether this is the strict letter of the law or not, it is a pity that, after a humane interpretation for a number of years, this new interpretation should be made at a time when destitution is likely to be more serious than ever it has been. To wait till children show obvious signs of starvation before feeding them is dangerous policy.

The twentieth annual report of the Carnegie Trust bears witness to the satisfactory continuance of its beneficent activities through the past year. The Research scheme, which is one of the most valuable parts of their work, has not yet got back to normal except in the departments of history, economics, and languages. In the scientific studies, the excessive teaching imposed by post-war conditions on the teachers in the universities has produced a relative barrenness of result from which there is no likelihood of escape for the next year or two. The most serious problem before the trustees has been the continued depletion of the fund for giving needy students assistance in the payment of class fees. There is obvious difficulty in keeping demands on such a fund within limits without resorting to an inquiry into the financial circumstances of applicants, and it cannot be said that the Trust have been successful in overcoming it. Their latest experiment is to require a statement from all applicants, as well as from their parents, to the effect that their circumstances are such that without assistance from the Trust they are unable to pay the class fees. It is absurd to think that this is literally true of the four or five thousand beneficiaries who will sign the declaration. Perhaps a quarter of the number might not be able to come to the university without the help given, but most of the rest would find ways and means, as their poor predecessors did before there was any Carnegie Trust. The only effect of such declarations is to make people with sensitive consciences refrain from applying, while others no worse off perjure themselves by subscribing to an obviously wrong formula. The method is unfair to all parties and ought to be reconsidered before next year.

Proposals regarding the future of the Scots College in Paris, adopted by a unanimous vote at the Conference of Students' Representative Councils held at Aberdeen, reopen a very old story. The college was established in 1325 by the Bishop of Moray for the benefit of students from his diocese who preferred to go to Paris University rather than to hostile England, and at a later time it became a place of residence for students from any part of Scotland. The conference urged that the university courts should get representations made to the French Government, through the usual diplomatic channels, to have the college restored to its original purpose of housing Scottish students studying in Paris. Perhaps M. Poincaré, who was recently Lord Rector of one of the Scottish universities, will see his way to accede to the wishes of the students and help in the restoration of an institution pleasantly reminiscent of the "auld alliance" of France and Scotland.

Scotland is the poorer for the loss of Sir Henry Jones, the distinguished Welshman who succeeded Edward Caird in the chair of moral philosophy in Glasgow twenty-eight years ago. Sir Henry has been a great power, not only among the students but in the community at large, with his happy combination of scholarship and oratory, and the manner of his dying will add to the influence he has deservedly exercised in the country of his adoption. Though stricken by a mortal disease he continued, in spite of pain and illness, to do his work, and succeeded in rounding off his life by completing the course of Gifford lectures in which he had set himself to present his philosophy.

Edinburgh has lost Sir Isaac Bayley Balfour, its professor of botany—happily only by resignation. Apart from the distinction of his career, Prof. Balfour's tenure of the chair of botany is made remarkable by the fact that his father was professor of botany in Edinburgh from 1845 to 1879, and that he himself, after professorships in Glasgow and Oxford, has been professor there since 1888.

SIR MICHAEL SADLER, addressing a large and representative public meeting at Rhyl on January 10, protested against any reduction of public expenditure on education, and appealed to the tax-payer not to begrudge the money so applied. He expressed himself in favour of extending the benefits of the Teachers Superannuation Act to teachers in efficient private schools on a contributory basis.

"SCIENCE PROGRESS" FOR JANUARY.—Young astronomers will be glad to have their attention called to a popularly written article, "The Story of Transits," by Mr. H. Spencer Toy, which appears in the January number of *Science Progress*. Other features of the journal include more technical articles on "The Law of Refraction" and "Soil Reaction," by Dr. R. A. Houston and Mr. E. A. Fisher respectively, as well as notes on recent advances in science, reviews of new books, &c.

REVIEWS AND MINOR NOTICES.

EDUCATION.

A Study of Modern Educational Theory and its Applications. By NANCY CATTY. (3s. net. Sidgwick & Jackson.)

Miss Catty's treatment of her subject falls into two parts, the first dealing with psychological foundations, and the second with educational applications. This is by no means the same as saying that theory and practice are held apart, for the hand of the practical teacher is evident in every page of her work. Both her psychology and her pedagogy are—rightly, as we believe—of the "behaviourist" type. The essential purpose of education is, in her view, to modify behaviour in certain directions, and it is in keeping with this conception that, in the psychological part of her work, she starts with instinctive action and bases herself mainly upon McDougall's well known exposition. In the second part she brings out the leading principles that govern, or ought to govern, the training of the child and the structure of the curriculum, and she has many sensible remarks to make upon syllabuses and time-tables. A couple of contributed appendixes set forth in detail a curriculum for a rural school, and a scheme of independent work for the upper standards of a town school. The book, as a whole, is marked by a liveness and a refreshing absence of pedantry which will be appreciated by the young teacher.

Psychoanalysis in the Service of Education.

By Dr. O. PFISTER. Authorized Translation. (6s. net. Kimpton.)

Dr. Pfister regards this book as an introduction to and amplification of his larger work entitled "The Psychoanalytic Method." As a matter of fact, it is an independent and self-contained book, and will be found of more practical value to the teacher than its bigger predecessor. Like all books on this subject, the present is better on the general aspect than on the detailed application to educational needs; indeed, Dr. Pfister is unnecessarily tantalizing, for at the beginning he gives an intensely interesting list of peculiar lines of error among pupils in dealing with the rudimentary subjects, and suggests that they can all be explained by psychoanalysis. But the reader has to lay down the book at the end without having encountered any explanation of the peculiarities. All the same, we cannot but feel that Dr. Pfister is better acquainted with the needs of the actual schoolroom than are the vast majority of writers on the psychology of the unconscious. The subject is indeed presented in such a way as to prove very attractive to the practical teacher, who, however, must make the practical application for himself. Perhaps Dr. Pfister talks too much about the iniquities of the academic psychologists who stand aloof from the newer movement; but it must be admitted that this book supplies some justification for its author's opinion that "Freud, the much-maligned and much-admired founder of psychoanalysis, will be ranked among the great inspirers of pedagogics." Dr. Pfister emphasizes the educational applications by consistently using the term "pedanalysis." The translation is clumsy, bearing too clear traces of the awkward style of the original. The proof-reading leaves much to be desired, and there is no index.

Paton's List of Schools and Tutors: an Aid to Parents in the Selection of Schools. Twenty-fourth Annual Edition, 1921-1922. (5s. J. & J. Paton.)

"Paton's List" must, we imagine, give to anyone consulting it a strong impression of the energy and resourcefulness which must go to its yearly making, and a feeling of admiration for such good workmanship. The volume can be truly described as the parents' compendium of educational institutions. In *The Journal* office it is found invaluable, offering as it does solutions to many inquiries received. To parents and others needing information as to schools and careers the work should prove equally helpful. The twenty-fourth annual edition appears to be as full and as comprehensive as ever. It contains long lists of good schools for boys and girls, lists of scholarships and exhibitions, information with regard to and lists of schools giving preparation for the Army, Navy, the Civil Service, and various professions, lists of tutors and coaches, and information as to fees. Particulars of physical training colleges, schools offering training in domestic economy, kindergarten training colleges, schools for backward children, &c., are given among much other useful matter. The work is a noteworthy production at a low price.

HISTORY.

Europe, 1789-1920. By Prof. E. R. TURNER. (21s. net. Heinemann.)

Prof. Raymond Turner, of Michigan, is well known in England both as an able and well informed historian of the Old World and as a frequent and genial visitant to its shores. In the light of the

(Continued on page 158.)

MACMILLAN'S LATEST LIST.

NINTH EDITION, REVISED.

Introduction to Physical Chemistry.

By Sir JAMES WALKER, LL.D., F.R.S. Ninth Edition. 16s. net.

THIRD EDITION, REVISED.

A Text-Book of Zoology. By the late T. J. PARKER, D.Sc., F.R.S., and W. A. HASWELL, D.Sc., F.R.S. Third Edition, thoroughly revised. In two vols. 50s. net.

SECOND EDITION, REVISED.

Introduction to the Mathematical Theory of the Conduction of Heat in Solids. By H. S. CARSLAW, Sc.D., F.R.S.E. Second Edition, completely revised. 8vo. 30s. net.

W. & A. K. JOHNSTON'S Publications.

A NEW WALL ATLAS.

W. & A. K. JOHNSTON'S NEW "EFFECTIVE" WALL ATLAS OF EUROPE.

6 Maps (size 28×34 inches), clearly and strikingly lithographed in colours, mounted, dissected to fold, and eyeletted. Price in strong case, 35s. net per set. Single maps, 6s. net each.

[Immediately.]

- No. 1.—Physical and Communications.
- No. 2.—Summer Pressure and Rainfall.
- No. 3.—Winter Pressure and Rainfall.
- No. 4.—Summer Temperature.
- No. 5.—Winter Temperature.
- No. 6.—Political.

These maps have been carefully prepared in order, as far as possible, to "tell their own story," and make Geography teaching really effective by allowing the pupil to visualize together both geographical causes and their effects.

THE EDINA GEOGRAPHIES.

Reduced Prices—Manilla covers, 1s. net; cloth backs and stiff sides, 1s. 4d. net each.

- | | | |
|------------------------|------------------|--------------|
| Book I.—British Isles. | 64 pp., 11 Maps. | Ready. |
| Book II.—Europe. | 72 pp., 14 Maps. | Ready. |
| Book III.—Asia. | 63 pp., 12 Maps. | Ready. |
| Book IV.—Africa. | 64 pp., 21 Maps. | Ready. |
| Book V.—North America. | 64 pp., 14 Maps. | Immediately. |

The characteristics of this series are:—**Conciseness, Clearness, Cheapness.** They are specially suitable for use for University Locals and Civil Service Examinations. Each lesson is followed by appropriate exercises.

THE EDINA HISTORIES.

Reduced Prices—Manilla covers, 1s. net; cloth backs and stiff sides, 1s. 4d. net each.

- | | |
|---------------------------------|---------------|
| Book I.—The Age of Settlement. | B.C. 55–1154. |
| Book II.—The Age of Chivalry. | 1154–1485. |
| Book III.—The Age of Adventure. | 1485–1603. |
| Book IV.—The Age of Strife. | 1603–1713. |
| Book V.—The Age of Empire. | 1713–1815. |
| Book VI.—The Age of Democracy. | 1815–1918. |

These histories are written on the latest approved methods, each chapter being devoted to tracing some historical movement of the period. Natural history is the basis, but it is shown in its proper setting as part of the development of civilization in the World as a whole.

The O.R.E. Atlases (Orographical, Regional, Economic). 32 pp. of coloured and black and white maps, and Index to each part. 1s. 6d. net each.

- | | |
|----------------------------|--------------|
| Part I.—The British Isles. | Ready. |
| Part II.—Europe. | Ready. |
| Part III.—Asia. | Ready. |
| Part IV.—Africa. | Immediately. |

A Commentary on the Holy Bible.

By various Writers. Edited by the Rev. J. R. DUMMELOW, M.A. With Maps.

Old Testament. Genesis—Esther. 4s. 6d. net.

New Testament. St. Matthew—Acts. 4s. 6d. net.

. Also published complete in 1 vol., 12s. net.

A Short History of British Expansion.

By JAMES A. WILLIAMSON, Author of "The Foundation and Growth of the British Empire," &c. With 21 Maps (8 in colour). 25s. net.

The Times.—"Mr. Williamson's excellent book. . . . He has produced a book of exceptional merit, and with all the making of a standard work. He has brought to his task a vast amount of research, great accuracy, clear narrative, and sane judgments, often happily expressed, on men, movements, and eras."

Our Hellenic Heritage.

By H. R. JAMES, M.A. With Illustrations and Maps. Vol. I: Part I, The Great Epics. 3s. 6d. Part II, The Struggle with Persia. 3s. 6d. 2 parts in 1 vol., 6s. net.

Education.—"The author brings to his task a rare critical acumen, combined with deep scholarship, and his book is the outcome of both these gifts. Added to which he possesses a capacity, not unlike Walter Pater, for writing English in such a way as to suggest Greek culture and customs."

Noctes Latinae Alterae.

Written, Adapted, or Arranged by WALTER MADELEY, M.A. With Illustrations. Pott 8vo. 2s. [Elementary Classics.]

SCHOOL EDITION.

The Odyssey of Homer.

Done into English Prose. By S. H. BUTCHER, M.A., LL.D., and A. LANG, M.A., LL.D. School edition. Manilla Cover, 4s.

English Literature Series for Schools. New Vols.

Lamb. Tales from Shakespeare.

Selected and edited by H. A. TREBLE, M.A.
First Series. 1s. 6d. Second Series. 1s. 6d.

Longer Narrative Poems. (18th Century.)

Edited for Schools by GEORGE G. LOANE, M.A., Author of "Dionysus." 1s. 6d.

ABRIDGED EDITION FOR SCHOOLS.

Scott's Kenilworth. With Introduction and Notes by MICHAEL MACMILLAN, D.Litt. Illustrated. 2s. 6d.

Principles & Practice of Business.

With Examination Questions in the Theory and Practice of Commerce, Business Organization, and Commercial Correspondence. By G. MAIRET, Lecturer in Commerce at the City of London School. 5s. [Life and Work Series.]

First Books of Science. New Vols.

A First Book of Applied Electricity.

By S. R. ROGET, M.A., A.M.Inst.C.E., &c. Illustrated. 2s. 6d.

A First Book of General Science.

An Introduction to the Scientific Study of Animal and Plant Life. By A. T. SIMMONS, B.Sc., and A. J. V. GALE, B.A. Illustrated. 2s. 6d.

The A.M.A.—"The aim of the authors is to provide a preliminary course of science which can be readily developed into a serious study of plant and animal physiology, and they appear to have carried out their intention excellently well."

An Introduction to Engineering Drawing.

By J. DUNCAN, Wh.Ex., M.I.Mech.E.

4s. [Life and Work Series.]

English Mechanic and World of Science.—"Will be found useful to young students. . . . It provides a course which will enable them to make drawings in a workmanlike manner, using drawing boards and Tee squares instead of drawing books which are made shift with in many schools."

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

four years just elapsed (viz., 1917-21), during which America emerged from her isolation and intervened with decisive activity in European affairs. Prof. Turner has written a sketch of Continental history from the French Revolution to the present day. It is a highly illuminative and profoundly interesting, if somewhat disorderly, survey. It is disorderly because it is conducted upon no obvious logical plan. Sometimes Europe as a whole is treated; at other times attention is long concentrated upon one individual country. Generally political history is the exclusive theme, but now and again economic, social, and intellectual factors are allowed a spasmodic appearance. But, in spite of chaotic arrangement and inconsistent treatment, it is illuminating and interesting, because it presents the views of a fresh, detached, and original mind on the great Continental problems of the modern world. The book is divided into two parts. The first covers the period 1789-1871: of its thirteen chapters, the most valuable are those which describe the Old Europe of the eighteenth century, and the changes effected by the political and industrial revolutions. The second part takes the story from 1871 to 1920: five of its fifteen chapters treat of the events of the cardinal years 1914 onward, and they give an extraordinarily vivid and impressive account of the crisis through which civilization passed during the terrible years of the war. Prof. Turner is under no illusions as to the causes of the war: it was due not to European anarchy, but to German ambition. The volume is illustrated by no less than thirty-two maps, many of them strikingly good.

The Influence of George III on the Development of the Constitution. By A. N. DAVIES. (4s. 6d. net. Oxford University Press.)

Mr. Davies has produced a slight, but unusually interesting, sketch of the constitutional history of that important period, 1760-1820, which saw the transition from declining oligarchy to dawning democracy in England. The centre of his picture is occupied by the King, George III, and Mr. Davies's representation of this reactionary monarch may be said to be little more than a vivid enlargement of Bagehot's perfect miniature, which depicted him as "a consecrated obstruction." Mr. Davies shows, by apt quotation from numerous letters and other original authorities, the nature of George's relations to his Ministers, to his Parliaments, and to the electorate. A short bibliography enhances the value of this scholarly little work.

MISCELLANEOUS.

Collected Papers: Historical, Literary, Travel, and Miscellaneous. By Sir A. W. WARD. Vol. III, Literary (i) (31s. 6d. net); Vol. IV, Literary (ii) (31s. 6d. net); Vol. V, Travel and Miscellaneous (36s.). (Cambridge University Press.)

A mere list of the subjects treated in these handsome volumes would fill our allotted space. We have studies of the earlier German humanism, sixty very solid pages on Shakespeare's "Henry VI," an even longer paper of considerable interest on "Shakespeare and the Makers of Virginia," a really spirited essay on "Dryden's Verse," studies of universities at home and abroad, and many reviews from the *Saturday* in its palmy days. One of these last deals with Abraham and Sancta Clara, the Spurgeon of Vienna at the end of the seventeenth century, and is remarkable for containing one of the author's very rare epigrams—"Vienna has always been an inviting, if not a promising, field for the exertions of a pulpit moralist"—and a surprising parallel to the chatter of Gorgo and Praxinoe from a sermon of the said Spurgeon. The wide range of the author's learning is apparent throughout, and he has allowed himself one charming paper on a traditional Chinese drama. We have noticed a few misprints, some of them quite bewildering.

I Have Reason to Believe. By STEPHEN PAGET. (5s. net. Macmillan.)

This book is the most recent contribution from the pen of the author of "I Wonder" and "I Sometimes Think." Contrary to expectations, it is addressed to a grown-up audience, and, although unpretentious, is a thought-provoking little volume. That Mr. Paget ranges wide over many subjects may be gathered from the titles of some of his essays: "Town Mice turned Country Mice," "The Writing of a Life," "Reduced Circumstances," "Catch-Words," "A Note on Loyalty," "The Victorian Age," "The Water-Babies," "Our Medical Correspondent," "An Eminent Victorian" (Mrs. Grundy). The essay entitled "He, She, and It" seems to us to be particularly interesting and excellent; also the one from which the book takes its title. Above all, Mr. Paget is an eminent Victorian. One may suspect this from his titles and a reading confirms it. This is no vice, and, at the present time, may be claimed as a virtue. At all events, "I Have Reason to Believe" is a book which any intelligent person can enjoy. Teachers will be interested in his views on children and psycho-analysis.

"Macmillan's Life and Work Series."—*Principles and Practice of Business.* By G. MAIRET. (5s.)

The "Life and Work Series" has a twofold aim—one cultural, the other utilitarian. For such a series business is an ideal subject; it is a matter of intense human interest; in this complicated present-day civilization men are dependent on one another, nations are dependent on one another, and the dealings of both are "business." Man has bartered, bought and sold, throughout his existence, and the study of "business" is therefore one of the humanities. The volume before us is packed full of useful information; many of the descriptions are interesting, and the whole is well arranged. Each chapter is reasonably complete in itself, so that the teacher can, while using the book, follow a scheme in which the order is different from the author's. The volume is full of information, yet the human interest is lacking: the vital spark is not there. By a curious error several dates of correspondence given in the book occur on Sundays. The English at times falls short of the standard set for commerce by the recently published Report on the Teaching of English. The ideal volume, however, has yet to be written. Here is a book, useful, readable, accurate in the main, suitable both to its purpose and to its public, which can be recommended to those teachers who wish for a text-book and to those students who wish to read the subject without the aid of a teacher.

RELIGIOUS KNOWLEDGE.

The Second Epistle of Paul to the Corinthians. A Study in Translation and Interpretation. By the Rev. W. H. ISAACS. (7s. 6d. net. Milford.)

Mr. Isaacs in this volume has made a real attempt to face some of the difficult and fundamental problems that perplex the translator. In a preliminary essay he gives a valuable discussion of the principles on which a real translation should proceed. This certainly is one of the most thorough discussions we have seen, and will well repay careful study. We have space only for the mention of one or two points. Mr. Isaacs enters a protest against what is usually described as "literal" translation. In the case of the Epistles of St. Paul, "its very fidelity to the style and idiom of the Greek would make it unintelligible to the English reader, and would so cancel its claim to be called translation." The translator's duties are defined as follows:—"He must first immerse himself in the language of the writer, to the point of thinking in that language. Only so can he possess himself of the writer's ideas. But, this done, he must turn his back upon the writer's language, and, with the ideas in his mind, disrobed of their literary form, he must transport himself to the language of his readers, and think in their language, in order to express the ideas in a form intelligible to them." Translation of this kind demands high qualifications, and also something (as Mr. Isaacs admits) of "inspiration." A short extract will enable the reader to appreciate the quality of Mr. Isaac's own efforts in translation. The following well known passage from II Cor. xii. ff. is given thus: "To draw attention to myself would indeed be out of place. I am about to speak of visions and unveilings of the Lord. As my mind travels back some fourteen years, I see before me a Christian convert transported (whether bodily or mentally God knows, not I) to the third heaven. I know that he was rapt up to Paradise—whether in the flesh or in the spirit God knows, not I—and heard words unlike aught in human speech—words a man dare not utter if he could."

SCIENCE.

"Cambridge Physical Series."—*Modern Electrical Theory: Supplementary Chapters.* Chapter XV: *Series Spectra.* By Dr. N. R. CAMPBELL. (10s. 6d. net. Cambridge University Press.)

That the author intends to continue his well known book on *Modern Electrical Theory* will please all workers in science. Of all subjects, electrical theory is developing most rapidly, and a book which is abreast of the times when published may in a very few years contain views which are obsolete. The method adopted by Dr. Campbell to keep his book up to date is new, and has much to recommend it. The parts of his original work are to be re-written in the form of monographs, and the present book is the first of this series. It is called Chapter XV, and deals with series spectra, chiefly from the point of view of Bohr's theory of atomic radiation. The book opens with an account of series spectra, more particularly that of hydrogen, and the manner in which the Balmer, Paschen and Lyman series may be derived from terms by the principle of combination. Then follows Bohr's explanation of this principle, by applying the quantum theory to the radiations from the atom in passing in steps from the neutral to the ionized condition, and the resulting explanation of Rydberg's constant

(Continued on page 160.)

HISTORY TEXT-BOOKS

MODERN INDUSTRIAL HISTORY

By F. R. WORTS, M.A., Senior History Master, Bristol Grammar School.

Second Edition. 4s. 6d. net.

A social and industrial history of the period subsequent to the Industrial Revolution, which is treated as the beginning of a new social order.

"Can claim to have fulfilled its purpose of informing and encouraging the student who begins this fascinating and interesting study."—*Schoolmaster*.

A SHORT HISTORY OF MODERN EUROPE

By E. L. HASLUCK, B.A., of the Westminster City School.

With entirely new Maps specially prepared for this volume.

4s.

A treatment of the period from the French Revolution to the Great War.

"A useful and clearly written introduction to the study of recent European history."—*Times Educational Supplement*.

A SHORT HISTORY OF MODERN ENGLAND

By F. BRADSHAW, M.A., D.Sc., Lecturer in History at Armstrong College, Durham.

With Maps and Diagrams. 5s.

A history of England from Tudor times to the outbreak of the Great War (1485-1914), written primarily for matriculation candidates.

"A well-written history, concise but not dull, and the result of a good deal of experience in the needs of students and examinees."—*The Times*.

CITIZENSHIP

By F. R. WORTS, M.A., Senior History Master, Bristol Grammar School.

Second Edition. 4s. 6d. net.

An account of Central and Local Government in this country, and of the rights and duties of a citizen, with a comparison between Roman and British citizenship added in this second large edition.

"A careful and valuable book, attractively written by a skilful teacher of the subject."—*Times Educational Supplement*.

A SHORT HISTORY OF SOCIAL LIFE IN ENGLAND

By M. B. SYNGE, Author of "Life of Gordon," "The World's Childhood," &c.

3s. 6d. net.

The story of the intimate lives of our ancestors, describing their homes, their food, clothes, manners, their education, with an account of the social changes that have taken place.

THE ANCIENT WORLD

By ALBERT MALET. Translated from the French by PHYLLIS WOODHAM SMITH, Lecturer in History at the Maria Grey Training College, London.

With 100 Illustrations. 5s. net.

The history of Egypt, Assyria, Persia, Greece, and Rome, specially adapted for the Middle Forms of secondary schools.

"Challenges comparison with Mr. Wells' *Outline*, and comes out of the ordeal wonderfully well."—*Scottish Educational Journal*.

"An excellent selection of interesting and incisive pictures of ancient social life."—*Teachers' World*.

AN INTRODUCTION TO WORLD HISTORY

By ERNEST H. SHORT, Author of "A History of Sculpture."

4s. 6d. net.

An inspiring and concise treatment of the growth of the Society of Man, with helpful guidance in the matters of note-taking, methods of study, &c.

"A masterly monograph on a great subject."—*Education*.

"An admirable synopsis of the past of humanity . . . capital suggestions for note-taking and study."—*Guardian*.

THE LIGHT OF HISTORY

By K. W. SPIKES, B.A. (Oxon.), History Mistress, Grey Coat Hospital School, Westminster.

4s. 6d. net.

A general European history, intended as a year's course for pupils who are already familiar with the broad outlines of English history.

An interesting and accurate sketch of nineteen hundred years of European history . . . evidence of extensive reading, fresh ideas, and balanced judgment."—*The Journal of Education*.

"Those who are really seeking to understand the problems of to-day—international as well as national—should read this book."—*Education*.

— ADDRESSES, AND INSPECTION IS INVITED. —

from the consideration of central orbits of the electron within the atom. The extension of Bohr's principle to elliptic orbits by Sommerfeld's generalization comes next, with its application to the Zeeman and the Stark effects. The last two sections are short and deal with the intensity of spectral lines and with band spectra. Books of this type are of the greatest value, forming as they do a connecting link between the original papers which are widely diffused throughout a large number of scientific publications and the more formal text-book in which well established facts should appear. This book is well arranged and the exposition clear, and will be valued by every one who is not already a specialist in the subject.

Alternating Currents. By C. G. LAMB. (Part I, 5s. 6d. net. Part II, 7s. 6d. net. Cambridge University Press.)

The author states that this book is primarily intended to assist the student in writing up his lecture notes. This hardly does justice to the book, as it consists of a continuous and concise introduction to alternating current working. It is written from the mathematician's point of view and presupposes the mathematical knowledge of an average third-year college student. Part I introduces the subject and explains the usual terms, the vector and the analytical treatments proceeding side by side. This part culminates in an interesting discussion of the transformer and the problems relating to it. Part II begins with an account of armature spacing and the production of sinusoidal and other forms of e.m.f. curves. Then come polyphase armatures, armature reactions and the problems of parallel running, synchronous motors, and power measurements. The type of senior student for whom the book is written will find it of the greatest assistance in acquiring a sound knowledge of alternating current practice.

Botany for Students of Medicine and Pharmacy.

By Prof. F. E. FRITCH and E. J. SALISBURY. (10s. 6d. net. Bell.)

This volume is mainly compiled from material—suitably modified and amplified to meet the special requirements of students of medicine and pharmacy—selected from the same authors' "Introduction to the Study of Plants" and "Introduction to the Structure and Reproduction of Plants," which we have already commended. It covers the ordinary medical syllabus, and that of the Pharmaceutical Society's Minor Examination, in a very satisfactory manner. Though some portions of the book are perhaps unnecessarily detailed for its particular purpose, keen students will read every page with interest and profit. The illustrations are numerous and excellent.

A Catalogue of British Scientific and Technical Books, covering every Branch of Science and Technology, carefully Classified and Indexed. Prepared by a Committee of the British Science Guild. (10s. net. British Science Guild, 6 John Street, W.C.2.)

Everyone engaged in scientific work is indebted to the British Scientific Guild for the production of this catalogue. The want of such a work has long been felt, as the search through the publishers' catalogues for a list of works on any subject is tedious, and often impossible. There is now a complete and classified list, which renders the search easy and instructive. The preface contains an account of the British Science Guild and its work, written by Sir Richard Gregory, with the names of the compilers of the present catalogue. The handsome appearance of the book and the clear printing do not, at first sight, suggest a catalogue, and it is to be hoped that the promised annual revisions will be produced in a similar form. The arrangement and index combine to enable the books by any author on any subject to be found in a moment, and the publishers, price, and date of latest edition are given. The compilers have done their work very thoroughly.

"The Century Books of Useful Science."—Creative Chemistry. By Dr. E. E. SLOSSON. (12s. 6d. net. University of London Press.)

Dr. Slosson's book originated in a series of articles prepared for the American press during the war, and is intended both for the general reader and as a source of supplementary knowledge for students of chemistry. Unlike much so-called popular science, there is evidence that in the book before us the author has consulted experts in the various subjects of which he treats, and, although obviously the technicalities of chemical technology are omitted, there is left a sound residuum of exact information. In brief, the book contains fourteen chapters which give clear, concise, readable, and well illustrated accounts of fertilizers, coal-tar colours, synthetic perfumes, artificial rubber and plastics, corn products, edible fats, gas warfare, and modern metallurgy. The whole work is the effort of an enthusiast, keenly anxious to get the man-in-the-street to realize what he owes to the labours of the men of science. No more useful book of its kind exists, and it can be most heartily commended.

GUY'S HOSPITAL MEDICAL SCHOOL.

THE HOSPITAL, which is situated two minutes' walk from London Bridge, contains 643 beds.

Students are appointed to Dresserships and Clerkships in the Wards and Out-Patient Departments on the Sixteenth day of January, April, July, and October. All Students hold the following posts in turn:—Surgical Ward Clerk; Clerk to Medical Unit, first three months; Dresser to Surgical Unit, first three months; Clerk to Medical Unit, second three months; Dresser to Surgical Unit, second three months; Obstetric Dresser, Extern, and Clerk in the Children's Department; Dresser in a group of Special Departments. Numerous other posts are open for application.

The Medical School Buildings have all been erected or rebuilt since 1904, the Department of Anatomy in 1904, of Biology in 1905, of Physiology in 1910, of Chemistry in 1910, of Physics in 1910, and of Pathology in 1912. The Wills Library was presented in 1903, the Gordon Museum in 1905.

The Students' Club and Residential College were erected in 1890. The Club contains reading, dining, and smoking rooms, while the College affords accommodation for about 60 Students, chiefly those who may be summoned to the Wards at any hour of the day or night.

Adjoining the Club are the Pavy Gymnasium, a covered swimming bath, and a squash racquet court. The Athletic Ground, of nine acres, is situated at Honor Oak Park, distant about 15 minutes by train.

FEES AND COURSES:

First Year.—For Preliminary Science Course: £22. 8s. for 12 months or less period, deducted from the Entrance Fee payable as a Second Year's Student. A special fee of £7 is charged for materials for this course.

Second or Third Year (after First M.B.): Entrance Fee, £28. Annual Composition Fee, £49, including all necessary materials.

Fourth Year (after Second M.B.): Entrance Fee, £14. Annual Composition Fee, £49, including all necessary materials.

Provided a Student has paid three annual composition fees, a proportionate rebate will be allowed from the last on his obtaining an approved qualification at any time within nine months of the last payment.

Entrance Scholarships to the value of £500 are awarded annually in September.

For further particulars, and permission to be conducted over the School Buildings, application should be made to

THE DEAN, GUY'S HOSPITAL, LONDON, S.E.1.

THE DALTON PLAN.—Miss Evelyn Dewey, the well known American educationist, has written a book describing fully the Dalton Laboratory Plan, adopted in Streatham County Secondary School and elsewhere, which will be published shortly by Messrs. Dent. Messrs. Bell will also issue a handbook on the subject by Miss Helen Parkhurst very shortly. Miss Parkhurst's own summary of the plan was printed in *The Journal of Education* for November last (page 694).

MR. MILFORD has become an agent for the sale of the British Museum Natural History publications.

PRIZE COMPETITIONS.

THE prize for the February competition is awarded to "Mondham"; *proxime accessit* "Emile."

Extract from Balzac's "Le Chef-d'œuvre inconnu."

By "MONDHAM."

"The mission of Art is not to copy nature but to express it," exclaimed the old man, emphatically. Form is a Proteus much harder to capture and more elusive than the Proteus of the tale. Even after long conflict it cannot be prevailed upon to show itself in its true aspect. Now, you people are content with the first appearance that it yields to you, or at most the second or the third; but that isn't the way of those who fight to win. The painter who will not own defeat doesn't allow himself to be taken in by these shifts—he perseveres until nature is reduced to the necessity of revealing itself stark naked and in its true spirit.

This was Raphael's way. His great superiority comes from that inner feeling which, in his work, seems to want to break through the Form. In his faces Form, as with us, is the medium whose function is to communicate ideas and feelings—it is a vast poesy. Every face is a world, a portrait of which the prototype has appeared to the painter in a sublime vision, instinct with light, instigated by a voice from within, stripped bare by a celestial hand, which has revealed, in the past of a whole life, the sources from which the expression has grown. You make for your women a beautiful vesture of flesh, beautiful draperies and hair. But where is the blood which begets the repose or the passion, and is the ultimate cause of certain particular effects? Just because you have made something that is more like a woman than a house you think you have reached your goal. Ah! but you haven't got there yet, my fine fellows. You will have to consume a deal of pencils and cover a deal of canvas before you get there. True, a woman carries her head in this fashion, holds her skirt so, her eyes droop and rest with a look of resigned sweetness, the fluttering shadow of her lashes dwells upon her cheek so. There it is—but there it is *not*. What is missing? Nothing—but that nothing is everything. You get the outward appearance of life, but you don't express that surplus which remains, that indefinable something which is perchance the soul, which hovers like a cloud over its external covering—life, in fact—that flower which Titian and Raphael managed to pluck unawares.

We regret an error in the extract set last time, *ce n'est pas après* instead of *ce n'est qu'après*. Many candidates noticed it and put it right; the prizewinner did not, but we can hardly blame him

for that. But we may fairly criticize his translation of *figure* by "face"; it is certainly "figure," its usual signification of the language of art. *Briser la forme* seems to suggest the compelling of Form to mould itself to express what the painter wants; "do violence to" is a good rendering. "The surplus which remains" is prosaic; "Emile's" "the fullness of life which overflows its continents" was much better. The number of candidates who translated *user bien des crayons* "use many pencils" was remarkable.

We classify the 109 versions as follows:—

Class I.—(a) Mondham, Emile, C.M.I., Gobelins, Mutatis Mutandis, Ardeonaig, Boy, Beda.

(b) Ariel, Thomas More, Bésigue, Dane, Menevia, Bruce, Cadwal, Will o' the Wisp, J.S., Mike, Malvern, Répétitrice, Francine, Fitzalan, Torelore.

Class II.—(a) Nibbidard, Summerhays, C.E.B., Back Number, M.M., Esse quam videri, R.H.A., Curiosity, Narcisse, St. Benoit, J.H.M., Agathos, Péronnelle, J.T.E., Ambitueuse, Baligant, Leander, Benedetto, Traddles, E.M.E., Sedes sapientiae, Puck, A.P., Borealis, Tristan, L.M.B., Gama, Caledon, I.R.A., Woodlea, Chevrolet, Io, Egg, Beegee, D.M.B., Penguin, Ivy.

(b) Erwartung, Emil Jay, Suze la Rousse, Pleiades, Dem, H.P.B., Norna, Maria, Johnny, Chingleput, C.E., Mascot, Senhouse, Inscitia, P.M.T., Theophano, Sirach, C., Renée, K.G.

Class III.—Hobbo, J.S.H., Adrienne, Eugène, Lazy Bones, Tréffe, M.K.R., Dogged, M.S.B., Eiram, Hibernia, Oenone, Jack, Onus, Benediction, S.H.C., Eugénie, Colmar, A.M.L., Carlyle, Loyalty, Columba, Brindavoine, R.M.A., Puella.

Class IV.—M.L.H., Brian Boru, Ouija, E.S.A.

A Prize of Two Guineas is offered for the best translation of the following extract from Mme de Sévigné's letters:—

C'est à vous que je m'adresse, mon cher comte, pour vous écrire une des plus fâcheuses pertes qui pût arriver en France; c'est celle de M. de Turenne, dont je suis assurée que vous serez aussi touché et aussi désolé que nous le sommes ici. Cette nouvelle arriva lundi à Versailles: le roi en a été affligé comme on doit l'être de la mort du grand capitaine et du plus honnête homme du monde; toute la cour fut en larmes, et M. de Condon pensa s'évanouir. On était près d'aller se divertir à Fontainebleau; tout a été rompu; jamais un homme n'a été regretté si sincèrement; tout ce quartier où il a logé, et tout Paris, et tout le peuple étaient dans le trouble et dans l'émotion; chacun parlait et s'attroupait pour regretter ce héros. Je vous envoie une très bonne relation de ce qu'il a fait quelques jours avant sa mort: après trois mois d'une conduite toute miraculeuse, et que les gens du métier ne se lassent pas d'admirer, vous n'avez plus qu'à y ajouter le dernier jour de sa gloire et de sa vie. Il avait le plaisir de voir décamper l'armée des ennemis devant lui; et le 27, qui était samedi, il alla sur une petite hauteur pour observer leur marche: son dessein était de donner sur l'arrière-garde, et il mandait au roi à midi, que, dans cette pensée, il avait envoyé dire à Brissac qu'on fit les prières de quarante heures. Il manda la mort du jeune d'Hocquincourt, et qu'il enverra un courrier pour apprendre au roi la suite de cette entreprise: il cachète sa lettre et l'envoie à deux heures. Il va sur cette petite colline avec huit ou dix personnes; on tire de loin à l'aventure un malheureux coup de canon, qui le coupe par le milieu du corps, et vous pouvez penser les cris et les pleurs de cette armée; le courrier part à l'instant, il arriva lundi, comme je vous ai dit: de sorte qu'à une heure l'une de l'autre, le roi eut une lettre de M. de Turenne, qui dit que les armées sont assez près l'une de l'autre; que M. de Lorges commande à la place de son oncle, et que rien ne peut être comparable à la violente affliction de cette armée.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on March 14, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

The Future Career Association.

Interviews invited.

CONVEYANCING DEPARTMENT.

This Department is under the direction of **MR. F. C. NEEDES, B.A.**, whose experience, advice, and assistance are unreservedly placed at the disposal of **Purchasers** free of charge.

TRANSFERS and PARTNERSHIPS arranged by correspondence or interview.
INSPECTIONS and VALUATIONS undertaken. **FOR SALE** (*inter alia*).

1. **Yorks.—Partner** required in a good class Girls Boarding School. There are 18 Boarders, 22 Day Boarders and 8 Day Pupils. Receipts 1921-22 £3,700. Large House and grounds with tennis lawn &c. Hockey field. Price for one-fourth share of Goodwill and Furniture £600, or one-third share £800.
2. **East Coast.—Flourishing Girls' Boarding and Day School.** Established by the present Principals over 14 years ago. There are about 13 Boarders and 42 Day Pupils, and the receipts for 1920 were nearly £1,600. Good premises with every accommodation. Rent £100. Vendors, who are going abroad, will accept £550 for Goodwill or close offer, and sell the furniture at valuation.
3. **Yorks: Seaside.—Old-established flourishing Girls' School.** 28 Boarders and 45 Day Girls. Receipts last 12 months nearly £1,750. Fine mansion situate in its own grounds, at the low rental of £70 per annum. Goodwill, connexion and Furniture, £750, of which £500 need only be paid down.
4. **Hants.—Partner** required in a good class **Home School** carried on in beautiful freehold premises belonging to Mr. Needes' client, who has spent some £700 or more in improvements, &c. There are about 12 pupils paying good fees. Premises very well furnished. No other school in the place, and one is urgently wanted. Partner required to help develop the school. Or vendor will sell the whole connexion to a married man.
5. **Nuclei.**—(1) North London: 60 girls, 33 boys. Receipts £540. Price £250. (2) Leicester. Dual School. Receipts over £750 p.a. Good chance of developing the **Boys'** branch. One term's fees and furniture at valuation.

For particulars of other Departments apply to the Secretary.

Nearest Stations: South Kensington and Gloucester Road.

THE Froebel Society Summer School

WILL BE HELD AT

**WESTFIELD COLLEGE (University of London),
HAMPSTEAD, N.W.3,**

Applications from intending purchasers are solicited for the following properties:

Middlesex.—Day School for Girls. Established and conducted by vendor since 1911, when she started with only one pupil. Gross receipts past year, £2,625. Net profits past year, about £751. Number of Pupils 211, paying from £3. 13s. to £6 per term, according to age. The vendor has erected a good school building containing 9 classrooms, 6 bedrooms, dining room, kitchen, &c., which has been approved by the Board of Education, costing in 1914 about £1,700 to build. The vendor wishes to sell same, or might grant a lease to a desirable purchaser. There is about 1½ plots of land at the side of the school building that could be leased from the vendor. Goodwill, one term's fees, School furniture at valuation; household if desired. We consider this an exceptional opening, therefore advise early treaty. —No. 7,250.

Sussex (Seaside).—Transfer or Partnership in old-established Boarding and Day School for Girls. Gross receipts about £2,649. Number of Boarders 32, fees up to £60 per annum. Number of Day Pupils 30, fees up to 7½ guineas a term. Rent of good house, facing the sea, £105. Price of goodwill to be arranged. Furniture at valuation. —No. 7,242.

Staffordshire.—For Disposal. Boarding and Day School for Girls. There are about 35 Pupils in all. Average gross receipts for 3 years, about £1,000 per annum. Average profits about £200 a year. Vendor states that two sisters could run the School much more economically than she has

been able to do. Vendor has had the School 12 years, and now wishes to sell as her health will not permit her to continue teaching and looking after Boarders. Price for goodwill and furniture to be arranged. —No. 7,291.

Home County.—Old-established and most successful Private School for Girls. The School is for sale owing to the health of the Principal. 41 Boarders this term and 11 Day Pupils. Fees as per prospectus 20 guineas a term for Boarders, without extras. Gross receipts about £2,700 per annum. Rent £150. The School has a very good record at Public Examinations. Price goodwill to be arranged. —No. 7,288.

Sussex (Seaside).—A client having a Boarding and Day School for Girls is anxious to dispose of same. The School has been established over 50 years. We are not certain as to the present number of Boarders, but believe there are about 15 to 20 at 30 guineas a term, and a few Day Pupils paying 3 to 7 guineas a term. The lease of the present house expires shortly, but our client states that she has the offer of another on the sea front at a rental of £150 per annum. Price asked for goodwill about £450, the furniture to be taken at valuation. —No. 7,289.

Essex (Seaside).—Girls' Boarding and Day School. Established and conducted by the vendor 17 years. Gross receipts past year about £2,500. Net profits past year about £700. Number of Boarders 20, paying up to 60 guineas, and

25 Day Pupils paying from 45 guineas a year without extras. Rent of detached house, near sea front, containing 10 bedrooms, 2 schoolrooms, large recreation room, dining and drawing rooms, and usual offices, electric light, £150; or the vendor would let for say 3 years at a rental of £125, tenant doing all repairs. Price for goodwill about £800, school furniture at valuation. Vendor might accept a capitation fee for all Pupils transferred. —No. 7,292.

Sussex.—Transfer or Partnership in old-established Boarding and Day School for Girls. Gross receipts about £3,000. Number of Boarders 39, paying about £60 per annum. Number of Day Pupils 31, fees up to 7½ guineas a term. Rent of good house, facing the sea, £105. Price for goodwill by arrangement. Furniture at valuation. Terms of partnership to be arranged. —No. 7,285.

Scotland.—Girls' Boarding and Day School (with little boys in Kindergarten). Established 50 years, and conducted by vendor 20 years. Gross receipts past year, £4,645; average gross receipts past 3 years, £3,750. Net profits, about £800. Number of Boarders 25, paying £120 to £140 per annum, and about 50 to 60 Day Pupils, paying from £25 to £40 per annum. Rent of large house, held on lease, which expires in May next, only £79. The vendors would accept one term's fees by way of goodwill. School furniture, and some household furniture, at valuation. —No. 7,241.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—

GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 & 13 Henrietta St., Covent Garden, London, W.C.2. Schools transferred and valued. **No charge whatever** will be made to vendors of Schools or School Partnerships unless a sale is effected or agreed upon. **No commission charge** whatever made to Purchasers of Schools or School Partnerships.

See also page 166.

Scholarships—continued.**UNIVERSITY COLLEGE, READING.****HALLS OF RESIDENCE.**

Wantage Hall (Men).	Wessex Hall (Women).
St. Patrick's Hall (Men).	St. George's Hall (Women).
St. Andrew's Hall (Women).	Cintra Lodge (Women).

THE College provides Courses for London University Degrees in Arts, Science, Agriculture, and Horticulture, and for Diplomas and Certificates. There are Faculties of Letters, Science, and Agriculture and Horticulture, and Departments of Fine Arts, Music, and Domestic Subjects. Courses are provided in Dairying and Commerce. There are Training Departments for Teachers. The Halls of Residence accommodate about 400 Students.

SCHOLARSHIPS IN ARTS, SCIENCE, AND MUSIC.

An Examination for a Major Open Scholarship in Science (of £75 per annum, open to men and women), a Wantage Scholarship in Arts (of £60 per annum, open to men), and a St. Andrew's Hall Scholarship in Science (of £40 per annum, open to women) will be held at the College on April 21 to 25, 1922. Candidates must be prepared to read for a London Degree. Entries must be sent in by March 17, 1922.

An Examination for one or more Scholarships in Music, each of about £26 per annum, will be held at the College on July 12, 1922. Entries must be sent in by June 28, 1922.

The Scholarships are tenable at the College for not more than three years from October, 1922. Further particulars of the Scholarships, and Prospectuses of the College, may be obtained from the Registrar, University College, Reading.

FRANCIS H. WRIGHT,
Registrar.

WYCOMBE ABBEY SCHOOL,
BUCKS.—An Entrance Scholarship Examination will be held in May, 1922. TWO SCHOLARSHIPS will be offered of the value of £60 each per annum. Candidates must be under 14 years of age on May 1st, 1922, after which date no entries can be received. For particulars apply to the HEAD MISTRESS.

Posts Wanted—continued.

These School and Teachers' Advertisements are continued from page 164.

EXPERIENCED MUSICIAN,
L.R.A.M. performer, Registered Teacher (26), highly recommended, requires post in or near London. Piano, Class Singing, &c.—W. A., 5 Pond Road, Blackheath.

EXPERIENCED MUSIC MISTRESS—Pianoforte, L.R.A.M., Registered Teacher—requires post, May Term, in Boys' or Girls' School. Non-res. Modern methods. Address—No. 11, 229.*

REGISTERED TEACHER,
Public High School and College experience, and success in Class Tuition by Correspondence for O. and C. Senior and Higher Exams., has time free. Address—No. 11, 232.*

Posts Vacant.**SCHOLASTIC, CLERICAL, AND MEDICAL ASSOCIATION, LTD.**

THE above Association is in a position to offer to well qualified ladies and gentlemen several first-rate scholastic appointments in all parts of the country. Candidates should write, with full particulars as to age, qualifications, experience, &c., to GENERAL MANAGER, 22 Craven Street, Strand, W.C.2. No charge for registration.

Scholarships—continued.**UNIVERSITY OF MANCHESTER.****HULME HALL.**

An Examination, to award ENTRANCE SCHOLARSHIPS AND EXHIBITIONS for proficiency in Classics, History, Mathematics, Modern Languages, or Natural Science, or in certain other subjects, will begin on Monday, May 8th, 1922, at 10 a.m. Candidates must be under 21 years of age. The Scholarships, each of the value of £20 a year, may be augmented up to £50 a year where satisfactory evidence is given that further assistance is needed. They may be held concurrently with any others, are tenable for three years contingently upon residence in the Hall, good conduct, industry, and proficiency, and may be increased in value or prolonged in tenure on the results of the Honours Examinations of the University.

Unsuccessful candidates wishing to enter the Hall as pensioners or non-scholars will have the advantage, in the event of applications for admission exceeding the number of vacancies, of having their marks in the Entrance Scholarship Examination taken into account, and of the selection for the offer of admission depending in their case not simply on priority of application or on other special claims.

Bursaries not exceeding £25 in annual value may be awarded to deserving students already resident, or about to be resident, in the Hall, if they require assistance to pursue their studies at the University. Bachelors of Arts or Science and Research Students are eligible for such Bursaries.

Candidates should communicate with the WARDEN, Hulme Hall, Victoria Park, Manchester S., from whom forms of application to compete may be obtained, which must be completed and returned between March 24th and 31st.

WEYMOUTH COLLEGE.**SIX SCHOLARSHIPS for CLASSICS or MATHEMATICS,**

of the value of £40 downwards, and open to boys between twelve and fourteen,

are offered annually for Competition.

Next Examination will be in June, 1922.

For Prospectus and other information apply to the HEAD MASTER.

Posts Vacant—continued.**POSTS ABROAD.**

LADY TEACHERS are earnestly advised to consult the Continental Secretary of the Girls' Friendly Society, 14 & 16 Holborn Place, Sloane Square, London, S.W.1, before accepting any post abroad. Apply by letter, enclosing stamped addressed envelope. A small charge is made for verification.

PROFESSORSHIP.

REQUIRED. — PROFESSOR of MATHEMATICS in the UNIVERSITY COLLEGE, COLOMBO, CEYLON. Candidates should be graduates in first-class honours in a British University. The selected candidate will be required to organize the Mathematical Courses and teaching both on the Science and Arts sides at the University College. He will himself take a considerable portion of the teaching, though in all probability he will have two lecturers to assist him. He should have considerable organizing ability and be a capable disciplinarian. Salary during three years' probation, £800 per annum with a temporary increase of £160 pending general revision of salaries. If the appointment is confirmed after three years, salary will be £850 rising by annual increments of £50 to £1,000 per annum. Colombo station allowance is given at the rate of 11% of substantive salary for a married officer, and 7½% for a single officer not living in Government quarters.

After confirmation 4% of salary is deducted as contribution to Widows and Orphans Pensions. Free passage to Ceylon provided for the officer and his wife and family not exceeding four persons.

Applications should be made in writing to the ASSISTANT PRIVATE SECRETARY (APPOINTMENTS), Colonial Office, Whitehall, London, S.W.1.

Scholarships—continued.**WESTFIELD COLLEGE. (UNIVERSITY OF LONDON.)**

Chairman of Council:

T. W. H. INSKIP, Esq., K.C., M.P.

Principal: Miss E. C. LODGE, M.A., F.R.Hist.S.
A SCHOLARSHIP Examination will be held in March, at which College Scholarships of £75 and £50 a year, and two GOLDSMITH Scholarships of £50 a year, and a few small EXHIBITIONS, will be offered for competition.

Students are prepared for the Arts and Science Degrees of the University of London; there is also a two years' course in Citizenship, for which a College Diploma is awarded.

Fees. — Residence £90 a year; Tuition from 38 guineas a year.

For further particulars apply to the PRINCIPAL—WESTFIELD COLLEGE, Hampstead, N.W.3.

WOODBIDGE SCHOOL.—

Three or four HOUSE EXHIBITIONS, open to boys under 14 years of age, will be competed for next May. These Scholarships exempt the holders from tuition fees (£10-£12), and usually carry with them Entrance Scholarships, bringing the total value to amounts varying from £25 to £50, according to the merit of the candidates.

For full particulars apply to the HEAD MASTER.

Posts Vacant—continued.**LECTURERS.****UNIVERSITY OF BRISTOL.**

Applications are invited by the University for the post of ASSISTANT LECTURER IN EDUCATION. The work will be chiefly in the Women's Section of the Department.

Qualifications in Science are necessary, and the appointment will date from the beginning of the Autumn Term.

Applications should reach the Registrar not later than March 8th, and further particulars may be obtained from him.

STAFF.

HEALTH-MISTRESS, or Matron,
or Matron-Caterer, wanted in May for a school of about forty girls. Must be experienced in care of health. Ability to take Home-Nursing classes or Drill, or to cater, a recommendation. Salary to depend on qualifications. Address, giving full particulars, and stating salary required—PRINCIPAL, Claremont, Esher, Surrey.

TYPEWRITING.

TESTIMONIALS, 6d. per dozen.
MANUSCRIPT, 8d. per 1,000 words. Examination Papers. Perfect work. — M. GLENISTER, 3 Friern Park, N. Finchley, N. 12.

HEADSHIPS.**DENBIGHSHIRE EDUCATION AUTHORITY.****RUBON COUNTY SECONDARY SCHOOL FOR GIRLS.**

Applications are hereby invited for the post of HEAD MISTRESS of the above school, duties to commence in September 1922.

Salary £500, rising, by annual increments of £25, to £650.

Candidates must be Graduates in Honours of a British University, and a knowledge of Welsh is desirable.

Candidates who desire the receipt of their application to be acknowledged should enclose a stamped addressed post card.

Canvassing the members directly or indirectly will disqualify.

Applications, endorsed "Head Mistress, Rubon County School for Girls," accompanied by copies of three recent testimonials, must reach the undersigned on or before Wednesday, April 12, 1922—ten copies of the form of application and of the testimonials to be sent by each candidate.

J. C. DAVIES, M.A.,

Secretary and Director of Education.
Education Offices, Ruthin,
10th February, 1922.

LICENSED ANNUALLY L.C.C.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

36 SACKVILLE STREET, LONDON, W.1,

invite applications from qualified Ladies who are looking for posts in the Teaching Profession.

This Agency, which is under distinguished patronage, has been established over 40 years.

The following are some of the Vacancies for Assistant Mistresses for the Easter, 1922, Term, for which MESSRS. GABBITAS, THRING & CO. have been asked to put forward candidates:—

General Form and Classical Mistresses.

ASSISTANT MISTRESS required in an important Girls' Public School in the Home Counties, to take up duties in September. Graduate essential. Salary offered from £130 per annum, resident.—No. 20,821.

CLASSICAL MISTRESS required, in May, for a large Girls' School in North Wales. The post is a resident one, and salary in accordance with the Burnham scale.—No. 20,880.

HISTORY SPECIALIST required, after Easter, for an important School in the Home Counties. Candidates should be able to offer some subsidiary subjects such as Classics or Mathematics. Salary offered £170 per annum rising by £10 annually to £300, in addition to board and residence. Church of England essential.—No. 20,801.

ASSISTANT MISTRESS required in a Girls' Private School in Scotland, to teach English subjects. Salary offered from £100 to £120 per annum, resident.—No. 20,903.

ASSISTANT MISTRESS required, after Easter in a Girls' Private School in the Lake District, to teach general subjects, including Mathematics. Salary offered £80 to £100 per annum, resident.—No. 20,915.

SENIOR ENGLISH MISTRESS required, in May, for a high-class Girls' School in the South-west of England. Subjects required: Geography, Botany, and Literature up to Matriculation standard, together with some subsidiary subjects. Salary offered £120 per annum, resident.—No. 20,833.

Mathematical and Science Mistresses.

MATHEMATICAL MISTRESS required, in May or September, in an important Girls' Boarding School in the Home Counties. Graduate or equivalent essential. The post will be resident, and salary according to the Burnham scale, with Pension Scheme.—No. 20,742.

SCIENCE MISTRESS required, after Easter, for a Girls' Private School in the Home Counties, to teach Geography, Botany, and General Elementary Science. Salary offered from £100 to £110 per annum, resident.—No. 20,818.

ASSISTANT MISTRESS required, in May, in a Girls' Private School in the Home Counties, to teach Geography and Botany. The post will be a resident one, and salary according to the Burnham scale, with Pension Scheme.—No. 20,885.

ASSISTANT MISTRESS required, in May, for Girls' Private School in the North of England, to teach Botany and Mathematics. Salary offered £150 per annum, resident.—No. 20,827.

Boys' Preparatory and General Junior Form Mistresses.

ASSISTANT MISTRESS required, after Easter, for a high-class Boys' Preparatory School in the North of England, to teach General Preparatory School subjects, including Elementary Mathematics and Latin. Salary offered £120 per annum, resident.—No. 20,910.

ASSISTANT MISTRESS required, after Easter, for Boys' Preparatory School in North Wales, to teach General Junior Form subjects to boys between the ages of 7 and 9. The subjects

should include good Drawing and Dancing. Salary offered £80 to £100 per annum, resident.—No. 20,133.

ASSISTANT MISTRESS required, after Easter, in a Boys' Preparatory School in North Wales, to teach Piano-forte and Singing, together with subsidiary subjects. It would be a recommendation if the candidate could offer Dancing. Salary offered from £50 to £100 per annum, resident. A higher salary would be given if Dancing was offered.—No. 20,126.

KINDERGARTEN MISTRESS required, in May, for Girls' Private School in the South-west of England. A candidate holding the Froebel Certificate would be preferred. Salary offered from £80 to £90 per annum, resident.—No. 20,751.

KINDERGARTEN MISTRESS required, in May, for Girls' Middle Class Private School in the South of England. Salary about £60 per annum, resident; but a higher salary would be given if Klocution was offered.—No. 20,774.

JUNIOR FORM MISTRESS required, in May, in a high-class Girls' Private School in the London area. The candidate appointed must hold the Froebel Certificate, and have had previous experience. The post is non-resident, and salary according to the Burnham scale.—No. 20,829.

KINDERGARTEN MISTRESS required, after Easter for a large Roman Catholic Secondary School in the North of England. Subjects to include Singing, Music, and Games. Salary offered £60 to £70 per annum, res.—No. 20,901.

LOWER FORM MISTRESS required, after Easter, for an important Girls' Private School in the London area. Candidate holding Froebel Certificate is looked for. Salary offered £80 rising by £5 to £105 per annum, resident, with Pension Scheme.—No. 20,887.

Gymnastics and Games Mistresses.

PHYSICAL CULTURE MISTRESS required, in May or September, at an important Girls' Public School on the South Coast. A Dartford candidate will be preferred. The post is a resident one, and salary according to the Burnham scale.—No. 20,861.

PHYSICAL CULTURE MISTRESS required, in September, at an important Church of England School in the North of England. A Dartford candidate is looked for. The post is a resident one, and salary offered according to Burnham scale with Pension.—No. 20,876.

PHYSICAL CULTURE MISTRESS required, after Easter, at a high-class Girls' Boarding School in the Home Counties. The post is a resident one, and good salary offered.—No. 20,803.

PHYSICAL CULTURE MISTRESS required, in May, at an important Girls' School run on High School lines, in the Home Counties. A Bedford candidate preferred. The post is a res. one, and a good salary offered.—No. 20,826.

GAMES MISTRESS required, to take up her duties in May, in an important Girls' Private School in the Home Counties. Bedford or Dartford candidate preferred. Salary offered from £100 to £120 per annum, according to qualifications and experience, together with board and residence.—No. 20,982.

PHYSICAL CULTURE MISTRESS required to take up her duties after Easter, in a large Girls' School within easy reach of London.

Her subjects should include elementary Dancing and Remedial Gymnastics. Salary offered from £90 to £100 per annum, according to qualifications and experience, together with board and residence. An extra salary will be given to a candidate who is able to offer good Dancing.—No. 20,945.

PHYSICAL CULTURE MISTRESS required, to take up her duties after Easter, in a large School in the London district. A candidate who has been trained at Dartford, Bedford, or Chelsea will be preferred. The post is resident, and a good salary will be offered.—No. 20,928.

Music Mistresses.

SENIOR MUSIC MISTRESS required, after Easter, for a high-class Girls' Boarding School in the North of England. Salary offered £90 per annum, resident.—No. 20,865.

MUSIC MISTRESS required, after Easter, in an important Girls' Boarding School on the South Coast, recognized by the Board of Education. Salary offered from £90 per annum, resident.—No. 20,842.

JUNIOR MUSIC MISTRESS required, to take up her duties after Easter, in an important Girls' Private School on the South Coast. Salary offered £40 to £70 per annum, together with board and residence.—No. 20,966.

JUNIOR MUSIC MISTRESS required, after Easter, in a small high-class Girls' Private School on the South Coast. Salary offered about £60 per annum, resident.—No. 20,986.

Modern Language Mistresses.

ASSISTANT MISTRESS required, after Easter for an important Girls' School in the London area, to teach French. The candidate appointed must be a communicant member of the Church of England. The post could be held as a resident or non-resident one, and, in either case, a good salary will be offered.—No. 20,892.

FRENCH SPECIALIST required, in May, for a large Girls' Secondary School in the Home Counties. Graduate or equivalent is essential. The post will be a resident one, and salary according to Burnham scale.—No. 20,886.

ASSISTANT MISTRESS required, after Easter, to teach French throughout the School, which is a high-class Girls' Private School on the South Coast, recognized by the Board of Education. Salary offered from £100 per annum, resident.—No. 20,900.

ASSISTANT MISTRESS required, after Easter, in a Girls' Private School on the South-east Coast, to teach French and English up to Senior Local standard. Salary offered £120 per annum, resident.—No. 20,898.

ASSISTANT MISTRESS required, after Easter, to teach French in an important Girls' Boarding School in the Home Counties. Candidates should be able to offer some subsidiary subject. The post will be resident, and salary according to Burnham scale, with Pension Scheme.—No. 20,796.

MISTRESS required, after Easter, for high-class Girls' Preparatory School on the South Coast, to teach French throughout the School, together with some subsidiary subjects. Salary offered from £75 to £85 per annum, resident, rising.—No. 20,815.

Messrs. GABBITAS, THRING & Co. have also on their Books Vacancies for Matrons, Student Mistresses, Private Governesses, and Foreign Mistresses.

Candidates desiring to apply for any of the above or other suitable vacancies should write fully to MESSRS. GABBITAS & THRING, stating their age, qualifications and experience, and enclosing copies of their Testimonials.

A Prospectus will be forwarded gratis on application. NO CHARGE FOR REGISTRATION, and no Fee of any kind is due unless an Appointment be obtained through the Agency.

SCHOOL TRANSFERS AND PARTNERSHIPS.

MESSRS. GABBITAS, THRING & CO. have a large number of BOYS' and GIRLS' SCHOOLS on the books in their Transfer Department. On learning a Purchaser's qualifications and requirements, they will send notices of opportunities likely to prove suitable, without making any charge to Purchasers.

LADIES with University or other teaching qualifications, and teachers of special subjects seeking appointments in Public or Private Schools, at home or abroad, for the Summer or Autumn Terms, should at once register with

Truman & Knightley

SCHOLASTIC AGENTS LTD

who will be pleased to give their requirements careful and personal attention.

THERE IS NO CHARGE FOR REGISTRATION OR MEMBERSHIP.

The terms to those securing engagements through this agency are:

On accepting the engagement 10s.
At the end of the first term of such engagement 2½%
On the first year's salary, with an additional fee of	£1
if the post be resident.	

Special terms for temporary engagements.

These fees are reckoned on the lowest possible basis consistent with efficient service, and compare very favourably with those charged by any other agency.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C.4.
AND AT GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 632.

MARCH 1, 1922.

HISTORY.

ANCIENT TIMES.

By J. H. BREASTED, Professor of Oriental History in Chicago University. 762 pages. Illustrated. 10s. 6d. net.

This book follows the trail of man from the earliest times to the overthrow of the Roman Empire. The Stone Age, the Civilizations of the Orient, of the Aegean, of Greece, and of Rome are studied in turn, but linked in such a way as to present the career of man without a gap in the one great epic of expanding life and civilization. The narrative is enriched by more than 300 illustrations.

"Such books as Prof. Breasted's 'Ancient Times' . . . should be in the hands of every member of a Classical Sixth."—Report of Prime Minister's Committee on Classics.

MEDIEVAL AND MODERN TIMES.

By JAMES HARVEY ROBINSON, Professor of History in Columbia University. 833 pages. Illustrated. 10s. 6d. net.

This companion volume to *Ancient Times* takes up the narrative of man's career where Prof. Breasted left it, and continues it down to the signing of the Armistice. In order that more space may be devoted to developments since the Congress of Vienna, the period prior to that event is treated in much less detail, more than one quarter of the book being occupied with the last hundred years.

By adopting a topical treatment the author is able to discuss in considerable detail the rise and progress of those movements and institutions which have shaped the progress of civilization.

OUTLINES OF EUROPEAN HISTORY.

PART I.—From the Earliest Times to the Opening of the Eighteenth Century. By J. H. BREASTED and J. H. ROBINSON. 730 pages. Illustrated. 10s. 6d. net.

These two books are written from the same broad general standpoint as *Ancient Times* and *Medieval and Modern Times* (see above), but in order to leave space for a somewhat fuller treatment of modern European history, the first sixteen centuries are treated more briefly in Part I, thus confining Part II to the last three centuries.

PART II. From the Seventeenth Century to the Present Time. By J. H. ROBINSON and C. A. BEARD. 793 pages. Illustrated. 10s. 6d. net.

THE DEVELOPMENT OF MODERN EUROPE.

By J. H. ROBINSON and C. A. BEARD. **Vol. I. The Eighteenth Century.** The French Revolution and the Napoleonic Period. 12mo, cloth. xiv + 362 pages, with maps and illustrations. 10s. 6d. net. **Vol. II. Europe since the Congress of Vienna.** 12mo, cloth. 528 pages, with maps and illustrations. 11s. 6d. net.

These volumes will meet the demand for a history of recent times which shall explain the social and economic, as well as the political, development of our own age, and shall also prepare the student to understand the great problems which the nations of the world have to face at the present time. Much less space is devoted to purely political and military events than has been commonly assigned to them in histories of the nineteenth century. On the other hand, the more fundamental economic matters—the Industrial Revolution, commerce and the colonies, the internal reforms of the European States, &c.—have been generously treated. By the addition of three chapters to Volume II, the narrative is brought down to the Peace of Versailles.

READINGS IN MODERN EUROPEAN HISTORY.

Edited by J. H. ROBINSON and C. A. BEARD. Two Volumes. Vol. I, 410 pages. 13s. 6d. net. Vol. II, 541 pages. 13s. 6d. net.

These *Readings* are intended to accompany chapter by chapter and section by section *The Development of Modern Europe*. Each volume contains more than two hundred extracts from a great variety of sources, which will serve the double purpose of enlivening the study of the text and providing useful and interesting material for written exercises.

(An illustrated pamphlet describing the Robinson, Breasted, and Beard histories will be sent post free on application.)

Recently Published.

ENGLAND AND THE EMPIRE.

A Modern History with some account of European Influences.

BOOK I.—From Earliest Times to 1485. 12mo, cloth. Illustrated. 157 pages. 2s. 9d. net. By E. STEVINSON, Lecturer in Handwork and Education at the Rachel McMillan Training Centre.

BOOK II.—From 1485 to 1680. 12mo, cloth. Illustrated. 192 pages. 3s. 3d. net. By EDWARD M. FIELD, sometime Scholar of Trinity College, Oxford, late H.M. Inspector of Schools.

BOOK III.—From 1680 to 1815. 12mo, cloth. Illustrated. 254 pages. 3s. 9d. net. By EDWARD M. FIELD, sometime Scholar of Trinity College, Oxford, late H.M. Inspector of Schools.

BOOK IV.—From 1815 to the End of the Great War. 12mo, cloth. Illustrated. 319 pages. 4s. 3d. net. By EDWARD M. FIELD, sometime Scholar of Trinity College, Oxford, late H.M. Inspector of Schools.

"These four attractive and instructive text-books are written from the point of view of the present; they seek to interpret existing conditions by relating them to their origins in the past; they coordinate British history with the histories of Europe, the Empire, and the world; they emphasize the continuity of human progress, and stress the importance of social development. The volumes are carefully graded in difficulty. Taken in succession they should provide an admirable introductory four years' course."—THE JOURNAL OF EDUCATION.

(A Prospectus of the Series will be forwarded on application.)

Books sent on approval to teachers.

GINN & COMPANY,

7 Queen Square, Southampton Row, London, W.C.1.

M^CDOUGALL'S EDUCATIONAL Co., Ltd.,

8 Farringdon Avenue, London, E.C.4.

FIVE NEW BOOKS

BY GEORGE SAINTSBURY

A Letter Book

Selected and introduced by GEORGE SAINTSBURY.
Crown 8vo. 6s. net.

"Contains an admirable selection of the best English epistles extant. . . . But the selector's introduction, really a complete history of the Art of Letter-writing, is even more notable than his selection . . . a delightful history, which has all the qualities of the best essayists, but, of course, a *bouquet* of its very own."—*Morning Post*.

"His introduction is a masterly summary of the ways and means of correspondents from the earliest ages. . . . The whole essay is, one need scarcely say, amusing and provocative in the extreme. So are the notes."—J. C. SQUIRE in the *Observer*.

BY SIR HENRY NEWBOLT

A Book of Verse

Chosen for Students at Home and Abroad by SIR HENRY NEWBOLT. Small crown 8vo. School Edition. 2s.

Sir Henry Newbolt's new anthology aims at furnishing an introduction to English thought and language, which will be readily understood and welcomed by students both at home and abroad. Modern poetry is well represented, a large proportion of the poems included being copyright.

A Short History of Our Religion from Moses to the Present Day

By D. C. SOMERVELL, M.A., Master at Tonbridge School.
Crown 8vo. 6s. net; or in 4 parts, Manilla covers, 1s. 6d. each.

This book has been written as a contribution to that most difficult subject, "Divinity" teaching in Secondary Schools. The author believes that our Bible teaching has been too much occupied with political, biographical, and geographical details which are only of secondary importance. He maintains that we should concentrate more on the religious aspects of the Bible, together with an extension of the study of Christianity outside the Biblical limits. With these objects in view he has presented in a fresh and interesting way a continuous history of religious development down to our own times.

Readable School Physics

By J. A. COCHRANE, B.Sc. Crown 8vo. With 8 plates and over 60 illustrations in the text. 2s. 4d.

[*Bell's Natural Science Series*: Editor, E. J. HOLMYARD, M.A., Head of the Science Department, Clifton College.]

This book is an attempt to humanize elementary physics without popularizing the subject. Theory has been given the main prominence. Experiments have not been described unless to elucidate principles. References to the makers of scientific history are frequent, and connexion with the pupil's own experience is established as often as possible. It is believed that the book will prove a valuable adjunct to the practical work in the laboratory. Portraits are included of eight of the most celebrated pioneers in physics.

A Short Algebra

By H. P. SPARLING, M.A., Assistant Master at Rugby School. Crown 8vo. 2s. 4d.

Contains examples on the various stages of School Algebra knowledge of which is required in Physics, Trigonometry, and the Calculus. To attain this end within so small a compass, verbal explanation of straightforward processes has been left to the teacher. The exercises on these are all simple and will be found sufficient.

Except for the Calculus, the book will be found to cover fully the ground of the School Certificate Examination of the Oxford and Cambridge Joint Board.

Cambridge University Press

STANDARD BOOKS: FRENCH

Cambridge Modern French Series. Edited by A. WILSON-GREEN, M.A.

Senior Group.

Six Contes, par Guy de Maupassant. Edited, with introduction, exercises, and vocabulary, by H. N. P. SLOMAN, M.A. 3s 6d net.

Ce que disent les Livres, par Émile Faguet, de l'Académie française. Edited by H. N. ADAIR, M.A. With 8 portraits. 3s 9d net.

Manuel de Lecture Expliquée. XIX^e Siècle. Edited by S. A. RICHARDS, M.A. 3s 6d net.

Théodore de Banville. Gringoire. Comédie en un Acte en Prose. Edited by A. WILSON-GREEN, M.A. 4s net.

De Vigny: Prose et Poésies. Edited, with introduction, exercises, and vocabulary, by A. WILSON-GREEN, M.A. Crown 8vo. 4s 6d net.

Middle Group.

Causeries du Lundi: Franklin et Chesterfield, par C. A. Sainte-Beuve. Edited by A. WILSON-GREEN, M.A. 2s 6d net.

Les Ailes de Courage, par George Sand. Edited by F. B. KIRKMAN, B.A. 3s 9d net.

J. J. Jusserand. La Vie Nomade et les Routes d'Angleterre au XIV^e siècle. Edited by A. WILSON-GREEN, M.A. 4s net.

Honoré de Balzac. Le Colonel Chabert. Edited by SYDNEY H. MOORE, M.A. 3s net.

Junior Group.

La Maison aux Panonceaux, par Lady Frazer. With exercises and vocabulary by A. WILSON-GREEN, M.A. 3s 6d net.

Cambridge Plain Texts: French. Edited, with biographical notes on the authors, by H. F. STEWART and A. A. TILLEY. Five volumes now ready, each 1s 3d net.

De Musset: *Carmosine.*

Lamartine: *Méditations.*

Gautier: *Ménagerie Intime.*

Bossuet: *Oraison Funèbre.*

Dumas: *Histoire de mes B tes.*

Cambridge Readings in French Literature. Edited by ARTHUR TILLEY. Crown 8vo. With 24 plates. 8s net.

"This is another most attractive book, containing selections from good French prose and poetry of all periods and reproductions of French pictures. The guiding idea is to illustrate the history of France by a record of some of her famous sons. . . . Mr Tilley's book should have an instant and durable success."—*The Spectator.*

Graduated French Dictation. By SYDNEY H. MOORE, B.A. Crown 8vo. 3s 6d net.

"Mr Moore explains in his preface exactly what dictation can do and how far it helps the pupil in the use of the language. Most teachers will agree as to its great value; many teachers will also agree as to the difficulty of finding hurriedly a suitable passage. Two hundred passages, arranged for different forms, are given; and also some passages in English for a Sixth Form, to be turned into French as dictated."—*The Educational Times.*

A Manual of French. By H. J. CHAYTOR, M.A. Crown 8vo. 4s net. Cambridge Guides to Modern Languages.

"To those who have limited time and opportunities for study, and yet long to appreciate to the full the beautiful passages and gems of French literature, this Manual of French will be the gate to their ambition . . . a valuable key to French literature."—*The Sussex Daily News.*

Cahier Français de Notes Diverses.

A French Note-Book arranged by W. E. WEBER, M.A. Third edition. F^cap 4to. 3s net.

A Manual of French Composition for Universities and Higher Classes of Schools. By R. L. G. RITCHIE, M.A., and J. M. MOORE, M.A. Second impression. Demy 8vo. 8s net.

"The authors are justified in claiming that this is a new departure in French Composition. It aims higher and sets a higher standard than any English manual with which we are acquainted."—*The Journal of Education.*

"It is indeed a fine scholarly piece of work. . . . No teacher who does higher work in French can study it without profiting greatly."—*The School World.*

Annotated Renderings of 100 Passages

selected from *A Manual of French Composition.* By R. L. G. RITCHIE and J. M. MOORE. Demy 8vo. 10s net.

"In this work Prof. Graeme Ritchie and Mr J. M. Moore supply renderings of about one-half of the passages given in their manual, together with excellent and stimulating notes. . . . Used in conjunction with the manual, this book should be an extremely valuable aid in the study and teaching of advanced French prose composition; it is, perhaps, the only English work of the kind fit for university use."—*The Journal of Education.*

Translation from French. By R. L. G. RITCHIE and J. M. MOORE. Demy 8vo. 8s 6d net.

"A book which is clear, helpful, and a pleasure to read and work through. We say 'work through' because the most valuable part is certainly that section which consists of models, or specimens of how fine translation should be carried out. It is in these passages, so carefully and delicately handled, that the science and art of the authors is most evident. . . . This, in short, is a very good book, and it should be bought."—*The Times Literary Supplement.*

A Junior French Reader. By R. L. G. RITCHIE and J. M. MOORE. 4s 6d net.

"A literary reader for third or fourth year pupils. The passages are chosen with the care and skill which one would naturally expect from the authors, and are representative of all branches of French literature. . . . Good notes are given. . . . This is a capital work."—*The Scottish Educational Journal.*

The Romantic Movement in French Literature, traced by a series of texts

selected and edited by H. F. STEWART and ARTHUR TILLEY. Crown 8vo. 7s net.

"Will be welcomed by all students of literature. It gives, what is far more precious than new theories, the ideas of the romanticists themselves about the movement in which they were involved. . . . Excellent introductions and notes throw all the desirable light on the text."—*The Cambridge Review.*

The French Romanticists. An Anthology of Verse and Prose, selected and annotated by H. F. STEWART and ARTHUR TILLEY. Crown 8vo. 6s net.

André Maurois: Les Silences du Colonel Bramble. Edited, with introduction and notes, by E. A. PHILLIPS, B.A., and E. G. LE GRAND, B. es L., and containing a special preface by M. MAUROIS. Crown 8vo. 5s 6d net.

"A well-edited version of this notable outcome (and consolidator) of the Franco-British Entente."—*The Glasgow Herald.*

Pitt Press Series of French classics. 57 titles. F^cap 8vo. With introductions and notes.

A list will be sent on application.

THE GEDDES COMMITTEE REPORT.

RECOMMENDATIONS AND CONCLUSIONS.

THE Report recommends:—

ELEMENTARY EDUCATION.

1. That grants in aid should not exceed an amount equivalent to the statutory obligation of 50 per cent. of the sums expended by local education authorities. (Present grant about 55 per cent.)
2. That children under the age of six be excluded from the schools.

(Continued on page 184.)

Cambridge University Press

RECENT PUBLICATIONS

Selections from the Poems of Sir

Walter Scott. Edited by A. HAMILTON THOMPSON, M.A., F.S.A. Crown 8vo. 4s 6d net. English Romantic Poets.

This volume concludes the series of *Selections from English Romantic Poets*. The principle of selection has been that which has guided the editor in making his selections for the previous volumes, namely, to exhibit the characteristic genius of the author through passages which, so far as possible, are complete in themselves, and may be read independently of the context for the sake of their own merits.

Hampshire. By TELFORD VARLEY. Crown 8vo. 3s 6d net. Cambridge County Geographies.

"For teachers it should be invaluable. . . . It is really a book that one cannot do without. The descriptions of scenery, local characteristics, and the like, are extraordinarily well done, and all through the book the amount of solid information conveyed is really amazing."—*The Hampshire Observer*.

An Introduction to Ecclesiastical Latin.

By Rev. H. P. V. NUNN, M.A. Crown 8vo. 6s net.

This book was written to meet the needs of a special class of students—namely, those who desire to study Ecclesiastical Latin. It is hoped that the book may be of use to ordination candidates; but there is also another class of student that the author had in mind when writing it—namely, those who either begin the study of Latin after they leave school, or who wish to continue their study for the purpose of improving their education.

The Pastons and their England.

Studies in an age of transition. By H. S. BENNETT. With a map. Demy 8vo. 15s net. Cambridge Studies in Medieval Life and Thought.

The Paston Letters have long been known to students for their wealth of information on English life and manners in the fifteenth century. The present volume is an attempt to present, in a systematised form, the information this Correspondence gives us concerning everyday life in fifteenth-century England.

HISTORY

The Teaching of History. By E. L. HASLUCK, M.A., F.R.Hist.Soc. Crown 8vo. 9s net. Cambridge Handbooks for Teachers.

The Cambridge Historical Readers.

Edited by G. F. BOSWORTH, F.R.G.S. In five books, each book containing a coloured frontispiece and numerous illustrations, maps, and plans.

Book I, **Introductory** (Stories of Greece and Rome). 2s 9d

Book II, **Primary** (Stories of Great Men and Women in British History). 3s

Book III, **Junior**. 3s 3d

Book IV, **Intermediate**. 3s 6d

Book V, **Senior**. 4s 3d

The last three deal with the history of Great Britain and Ireland and the Dominions beyond the Seas, and are on the concentric method.

The Story of the People of Britain.

A periodic history, in four books. With numerous illustrations. Crown 8vo. 3s to 4s each.

Britain in the Middle Ages. A History for Beginners. With 28 illustrations. By F. L. BOWMAN. 3s 6d net.

Britain and Greater Britain in the Nineteenth Century. By E. A. HUGHES, M.A. 6s net.

A Short History of the Expansion of the British Empire from 1500–1920. By Professor W. H. WOODWARD. Fourth edition. With 10 maps. 6s 6d net.

An Outline History of the British Empire from 1500–1920. Third edition. By the same author. With maps. 4s net.

A Picture Book of British History. Compiled by S. C. ROBERTS, M.A. Vol I, to 1485. With 190 illustrations. 7s net. Vol II, 1485–1688. With 200 illustrations. 6s net. Also in loose sheets in portfolios at 5s each.

History of England for use in Schools.

Greek History for Schools. By C. D. EDMONDS, M.A. 6s 6d net.

A Short History of Rome for Schools.

By E. E. BRYANT, M.A. 4s 6d net.

Outlines of Ancient History, from the Earliest

Times to the Fall of the Roman Empire in the West, A.D. 476. By HAROLD MATTINGLY, M.A. Crown 8vo. With 35 illustrations and 12 maps. 10s 6d net.

FETTER LANE, LONDON, E.C.4: C. F. CLAY, MANAGER

3. The closing of small schools.
4. A revision in the staffing. At present the staffing, according to the Report, is in the ratio of one teacher to 32.4 children. The ratio 1 to 50 is suggested.
5. A reduction in the remuneration of teachers.
6. A diminution in the expenditure on special services (medical inspection, schools for defectives, provision of meals, &c.).

It is estimated that the carrying out of these proposals would effect a reduction in anticipated expenditure by local education authorities, in 1922-3, of £13,729,000 as follows :

	Anticipated Expenditure.		Suggested. Expenditure.
Teaching cost	£44,975,000	...	£36,000,000
Loan charges	3,146,000	...	3,146,000
Special services	3,910,000	...	3,000,000
Administration and other expenditure ...	14,844,000	...	11,000,000
	£66,875,000		£53,146,000

This, under the strict application of the 50 per cent. grant obligation, would represent, in round figures, a saving to the tax-payer of £10,000,000, and to the rate-payer of £3,700,000.

HIGHER EDUCATION.

Secondary Schools.

7. That the number of free places should be limited to 25 per cent.
8. A substantial increase in fees.
9. The limitation of secondary education to pupils who show ability and industry.
10. A revision of the Grant list. It is suggested that schools which could hardly be considered as requiring State aid are now receiving assistance from rates and taxes.
11. A revision in the classification of schools. The Report suggests that the practice of disbursing direct grants to schools not fully controlled by the local education authorities should cease, and that in future no grant should be made to such a school, except through the local authority as an intermediary.

Technical Schools (including Continuation Schools).

12. The postponement of progressive development.

Training of Teachers.

13. A reduction in the number of students in training to become teachers.
14. A closer approximation of fees to the actual cost.

Aids to Students.

15. A review of the grant on behalf of local expenditure on maintenance allowances to ex-elementary pupils continuing their education at secondary schools.
16. That the recently introduced State scheme of scholarships at the universities should cease.

If the recommendations with regard to higher education are carried out, the estimated saving will be :

To the tax-payer	£3,500,000.
To the rate-payer	2,500,000.

Miscellaneous Expenditure.

17. A reduction in the expenditure on museums.
18. Further staff economies as regards the Board's administration and inspection.

TEACHERS' PENSIONS.

19. That teachers' superannuation should be placed on a contributory basis. It is suggested that a full inquiry should be held, and that meanwhile a 5 per cent. levy should be paid by the teachers.

GRANTS TO UNIVERSITIES AND COLLEGES.

20. The carrying out of the Treasury notification that the total Grant would be reduced to £1,200,000 is regarded as satisfactory.

SUMMARY OF CONCLUSIONS.

(As given in the Report.)

As a result of our consideration, we are of the opinion :—

(1) That of recent years the national expenditure on education has far exceeded what the country can at present afford. The cost of elementary and secondary education *per pupil* has increased unreasonably. The incidence of cost has been transferred increasingly from the local rate-payer to the tax-payer, and this has had the serious effect of decreasing the financial responsibility of those who actually spend the money. The Board of Education Vote has since 1918-19 grown from £19,000,000 to £50,000,000.

(2) That children should not be taken into State-aided schools until they have reached the age of six.

(3) That the cost of teaching must be brought down by the local authorities, and that the only way to effect this is to tell each local authority how much money it can have, and leave it to the local authority to reap thereafter the full benefit of any economies it may make, and we have suggested ways in which we think that such economies can be made. We are impressed by the position of impotence of the Board of Education in either controlling expenditure or effecting economies, once the policy has been determined. There is no doubt, on the other hand, that local authorities have been urged into expenditure upon a scale which they would not have contemplated if left free.

(4) That the grants for secondary education are providing State-aided or free education to a class which can afford to pay an increased proportion or even the full cost of education, and that children whose mental capabilities do not justify this higher and much more costly education are receiving it. We wish to make it clear that we do not recommend any serious reduction in free secondary education, but suggest that it should be confined to children whose mental calibre justifies it and whose parents cannot afford to pay for it.

(5) That as regards higher education generally and scholarships, the expenditure is in excess of the nation's ability to pay, and must be reduced.

(6) That the estimates for the Board of Education for the year 1922-23 should be reduced from £50,600,000 to £34,500,000 (which is approaching twice the 1918-19 provision), a reduction of £16,100,000, which, with the automatic reductions in Scotland, will yield £18,000,000, and we recommend that whatever proportion of the reduced sum is to be paid to local authorities should be so allotted by the Board of Education that the vicious results of the percentage grant system shall be terminated forthwith.

(7) That the question of superannuation of teachers should be examined, and we suggest that this should be put upon a contributory basis. We view with alarm the liability under this head which is accruing, and which, we are told, may well amount ultimately to £12,000,000 per annum.

We have suggested that a 5 per cent. contribution on salaries should be made by teachers, which would have an immediate effect upon the Exchequer, but the whole question should be gone into forthwith before the growth of vested interests makes it incapable of modification.

FINANCIAL EFFECT OF RECOMMENDATIONS.

Our suggestions on different portions of the Vote would produce the following result :—

Grant for elementary education	£26,573,000
Grant for higher education	6,050,000
Miscellaneous expenditure	4,055,000
	36,678,000
Deduct superannuation contributions	2,000,000

Net total £34,678,000

This figure compares with the Board's estimate of £50,600,000. It may be added that there would be a consequential saving of £2,000,000 on the Vote for the Scottish Education Department, making a total reduction on these Votes of £18,000,000.

PATON'S LIST OF SCHOOLS 1922

Principals wishing to have their schools included in the next issue should apply at once for particulars to

J. & J. PATON, EDUCATIONAL AGENTS,

143 CANNON STREET, LONDON, E.C. 4.

Telephone: Central 5053.

FREE PUBLIC LECTURES.

[Under this heading a list of free public lectures of especial interest to teachers will be published month by month. The figure in parentheses indicates the number of a lecture if it is one of a series. Titles of lectures for possible insertion in this list should be received at the *Journal Office* not later than the middle of the month preceding that in which the lecture is to be delivered.]

MARCH 1.

L.C.C. (at Horniman Museum, Forest Hill, S.E.), at 6.—Mr. W. W. Skeat: The Living Past in Britain (6). Also on Mar. 8, 15, 22, and 29.
KING'S COLLEGE, at 5.15.—England in the Eighteenth Century (6). Mr. J. L. Hammond: Society in England in the Eighteenth Century.
UNIVERSITY COLLEGE, at 5.30.—Miss E. Jeffries Davis: Some Printed Materials for the History of England. Sir Courtenay Ilbert: The New Constitution of India (Government of India Act, 1919) (1) (Rhodes Lectures). Also on Mar. 8 and 15. At 8.—Dr. Percy Stocks: Scheme of the Anthropometric Measurements in the Biometric Laboratory.

MARCH 2.

UNIVERSITY COLLEGE, at 5.30.—Dr. C. Pellizzi: Giordano Bruno in Inghilterra (in Italian). At 5.15.—Prof. J. E. G. Montmorency: Welsh and Irish Tribal Customs (4).
SCHOOL OF ORIENTAL STUDIES, at 5.—Dr. L. D. Barnett: The Hindu Culture of India (1). (Forlong Bequest Fund Lectures.) Also on Mar. 9, 16, 23, and 30.
CIVIC EDUCATION LEAGUE (Leplay House, Belgrave Road, S.W.), at 8.15.—Miss Margaret Tatton: Art in Relation to Education.

MARCH 3.

METEOROLOGICAL OFFICE, at 3.—Sir Napier Shaw: The Structure of the Atmosphere and the Meteorology of the Globe (7). Also on Mar. 10, 17, and 24.

MARCH 4.

L.C.C. (at London Day Training College), at 11.—Prof. John Adams: The School Class (7). Also on Mar. 11.
L.C.C. (at Polytechnic, Regent Street, W.), at 10.30.—Prof. A. Harden: Vitamines.
HORNIMAN MUSEUM (Forest Hill, S.E.), at 3.30.—Mr. F. Balfour-Browne: Dragon-flies and their Life History.

MARCH 6.

L.C.C. (at City of London Boys' School, Victoria Embankment, S.W.), at 5.30.—Miss Rosa Bassett: A Year's Experiment with the Dalton Plan in a London School (5).

ALDENHAM SCHOOL, NEAR ELSTREE, HERTS.—ENTRANCE SCHOLARSHIPS.—An Examination will be held on June 1 and 2, 1922, for Scholarships tenable for two years and open to boys under 15 on May 1—namely, one Alfred Smith Scholarship of £50, about four Junior Platt Scholarships of £40. Assistance, by partial remission of tuition fees, may be given at the discretion of the Governors to scholars and other boys showing promise in cases where need of such assistance exists. Application should be made at the time of entry. Further particulars may be had from the HEAD MASTER.

BEDFORD SCHOOL.—Head Master: REGINALD CARTER, M.A. An Examination will be held at Bedford in March, 1923, for 4 Exhibitions £50-£40, and 6 Nominations £10-£20 for Boarders, and 4 for Day Boys. Apply for particulars to—HEAD MASTER, Bedford.

OLD BEDFORDIAN WAR MEMORIAL EXHIBITIONS.—Seven Exhibitions are offered to Sons of Old Bedfordians on certain conditions. For particulars apply—HEAD MASTER, Bedford School.

BISHOP'S STORTFORD COLLEGE. ENTRANCE SCHOLARSHIP EXAMINATION.—AN EXAMINATION is held annually in June, when SCHOLARSHIPS, EXHIBITIONS, and BURSARIES, varying from £50-£10, are offered.—Apply to the Head Master, Mr. F. S. YOUNG, M.A.

BLUNDELL'S SCHOOL, TIVERTON.—Six FOUNDATION SCHOLARSHIPS, including two of £60 a year, are competed for annually at the end of May. Candidates must be between 13 and 14 years of age on May 1st. The names of candidates must be sent in before May 20th to the HEAD MASTER, from whom entry forms and full particulars can be obtained.

BRIGHTON COLLEGE.—An Examination will be held June 6-7 to elect to EIGHT SCHOLARSHIPS varying in value from £60 to £45 a year. Full particulars on application to the HEAD MASTER.

CHELTENHAM COLLEGE.
TWELVE SCHOLARSHIPS AND EXHIBITIONS (not open to members of College or Junior School). These include five of £80 (one increased to £100 for special merit); "James of Hereford" Scholarship of £35 for boys born, or brought up, in Herefordshire; R.A.M.C. Scholarship of £50 (preference to sons of fallen officers). Awards made for all-round excellence, or special proficiency in any main subject. A Preliminary Examination will be held at the Candidate's School on Tuesday, May 23, and the Final Examination for Selected Candidates at Cheltenham on Wednesday and Thursday, May 31 and June 1.—Apply BURSAR, CHELTENHAM COLLEGE.

DULWICH COLLEGE.
SCHOOL SCHOLARSHIPS are open for competition in May. Candidates for the Senior Scholarships must be under 17. Candidates for the Junior Scholarships must be under 13. Full particulars and entrance forms may be obtained on application to the SCHOOL SECRETARY, Dulwich College, S.E. 21.

SCHOLARSHIPS.
FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—Examinations for SCHOLARSHIPS tenable in College and Manufacturing Works are held annually in April. For particulars apply to CHIEF CLERK, 66 Southampton Row, W.C.1.

FRAMLINGHAM COLLEGE, SUFFOLK.

PUBLIC SCHOOL. Incorporated by Royal Charter. Head Master: F. W. STOCKS, M.A. Inclusive Fees, £57 to £66 per annum. Modern Laboratories and Workshops.
EXAMINATION FOR ENTRANCE SCHOLARSHIPS in March.
Illustrated prospectus and full particulars on application to the HEAD MASTER or the SECRETARY.

GIGGLESWICK SCHOOL.—THREE SCHOLARSHIPS will be offered in June of the value of £70, £40, and £30.—Further details from THE BURSAR, Giggleswick School, Settle, Yorks.

GRESHAM'S SCHOOL, HOLT, NORFOLK.

ANNUAL SCHOLARSHIPS EXAMINATION.
JUNE 7TH AND 8TH.

ENTRIES received not later than 13th May. Apply to the HEAD MASTER.

GUY'S HOSPITAL MEDICAL SCHOOL.

OPEN ENTRANCE SCHOLARSHIPS.

TWO OPEN ENTRANCE SCHOLARSHIPS, each of the value of £100, will be awarded, one in ARTS and one in SCIENCE, in September, 1922.

AN OPEN WAR MEMORIAL SCHOLARSHIP, of the value of £200, will be awarded in SCIENCE in September, 1922.

GUY'S HOSPITAL DENTAL SCHOOL.

OPEN ENTRANCE SCHOLARSHIPS.

AN OPEN WAR MEMORIAL SCHOLARSHIP in ARTS, of the value of £40 per annum for four years, will be awarded in September, 1922.

AN OPEN ENTRANCE SCHOLARSHIP in SCIENCE, of the value of £40 per annum for not more than four years, will be awarded in September, 1922.
Full particulars of the conditions and copies of previous Examination papers can be obtained from the DEAN, Guy's Hospital Medical School, London, S.E. 1.

HEREFORD CATHEDRAL SCHOOL.

AN ancient Public School of 140 boys, offering great advantages to University Candidates. Leaving Scholarships annually. B.N.C., Oxford, £70 (sometimes two); St. John's College, Cambridge, £50, £40; also Leaving Exhibitions, £50, tenable with one of the foregoing.

Seven or eight Entrance Scholarships, ranging from £90 downward to be offered in June, 1922. Boating: O.T.C. Summer Term begins on May 5. Vacancies. For further information apply to Dr. J. H. E. CREES, Head Master.

KENSINGTON HIGH SCHOOL (G.P.D.S.T.)

MUSIC TRAINING DEPARTMENT.

Admission in September, January, and May.

THREE SCHOLARSHIPS awarded annually.

For information apply to the HEAD MISTRESS, Kensington High School, St. Alban's Rd., Kensington, W.8.

KING'S SCHOOL, CANTERBURY.—ENTRANCE and KING'S SCHOLARSHIPS. Some FIFTEEN SCHOLARSHIPS each June and November. For particulars apply to Head Master—A. LATTER, M.A.

KING'S SCHOOL, BRUTON, SOMERSET.

THIS School, which was founded in 1519, is an endowed Public School in which boys are prepared primarily for University, Army, and Professional Examinations. Three Scholarships (£50, £40, and £30 per annum) tenable in the School, are offered annually in June, and there are two Leaving Exhibitions and one Leaving Scholarship. There is a Junior School for boys under 12. Fees, £80 13s. to £85 15s.—C. H. TREMLETT, M.A., Head Master.

LIVERPOOL COLLEGE FOR GIRLS. Huyton Hall, Huyton, Near Liverpool.—An Entrance Scholarship Examination will be held in May, 1922. A Scholarship of £50 and a Bursary of £30 per annum will be offered. Candidates must be under 14 years of age on May 1, 1922, after which date no entries can be received. For particulars apply to the Head Mistress.

NEWMHAM COLLEGE.—NINE SCHOLARSHIPS, one of £60, and others of £50 and £35, are offered in March on the results of a joint examination with Girton College. A certain number of EXHIBITIONS may also be awarded. Particulars can be obtained from the PRINCIPAL.

POCKLINGTON SCHOOL, EAST YORKS.
Founded 1514 A.D.

ENTRANCE SCHOLARSHIPS in June, when two Scholarships of £50 a year for CLASSICS will be awarded. Age limit 16 on June 1st. Fees £75 a year inclusive. Apply—Head Master, P. C. SANDS, M.A., late Fellow of St. John's College, Cambridge.

ST. JOHN'S SCHOOL, LEATHERHEAD.

—HEAD.—In addition to sons of living clergy elected on the Free Foundation, Supplementary Foundationers (sons of living clergy only) are received at the annual fee of 45 guineas. The School is also open to sons of Clergy or Laymen paying full fees, viz. Clergy 95 guineas, Laymen 105 guineas per annum. Day-Boys 33 guineas per annum. Modern School buildings for 240 boys. Boys prepared for the Universities, Army and Civil Service Examinations, etc. Leaving Scholarships. One or two Albany Scholarships awarded each year. Also three Entrance Scholarships, value £45, £35, and £25 per annum. Scholarship examination for 1922 and 1923 on the first Wednesday in July—entries close the last day of June. For Prospectus, &c., apply to the Head Master, the Rev. E. A. DOWNES.

S. PETER'S SCHOOL, YORK.

AN Examination for Scholarships and Exhibitions, varying from £50 to £15, is held annually in May. General knowledge is required in preference to specialization in one subject. Exhibitions also awarded on the Common Entrance Examinations.
Further details from—
S. M. TOYNE, M.A., Head Master.

University of London. University College.

THE SESSION 1922-23 will begin on October 2. Intending students are invited to communicate with the Provost as soon as possible.

ENTRANCE SCHOLARSHIPS.
Examinations will be held, beginning on or about May 2, 1922, for the following Scholarships:—

A.—Tenable in one of the following Faculties—
Arts, Laws, Science, Medical Sciences, and Engineering.

THREE ANDREWS SCHOLARSHIPS, value £30 each.

The Scholars are eligible for Andrews First or Second Year Scholarships at the end of their first and second years.

ST. PANCRASS SCHOLARSHIP, carrying exemption from College Composition Fees.

B.—Tenable in the Faculty of Arts only—
WEST SCHOLARSHIP in English and English History, value £30.

ROSA MORISON SCHOLARSHIP, value £30 a year for three years.

C.—Tenable in the Faculty of Science only—
GOLDSMID SCHOLARSHIP, value £30 a year for three years.

D.—Tenable in the Faculty of Engineering only—
GOLDSMID SCHOLARSHIP, value £30 a year for three years.

Special concessions have been arranged for Candidates who have been on War Service.

Examinations will be held, beginning in June, for the following Scholarships, tenable in the Faculty of Medical Sciences:—

BUCKNILL SCHOLARSHIP, value 135 guineas.

TWO EXHIBITIONS, value 55 guineas each.

Application for full Regulations of the above-mentioned and other Scholarships, or for Prospectuses of the College in all Faculties, or for particulars of Post-graduate and Research work should be made to

WALTER W. SETON, M.A., D.Lit.,
Secretary.

University College, London.
(Gower Street, W.C.1.)

Continued on page 195.

Scholarships—continued.

SHERBORNE SCHOOL.

AN Examination for **ENTRANCE** **SCHOLARSHIPS**, open to Boys under 14 and over 12 years of age on June 1, 1922, will be held early in June. Further information can be obtained from the **HEAD MASTER**, School House, Sherborne, Dorset.

ST. PAUL'S GIRLS' SCHOOL,
BROOK GREEN, HAMMERSMITH, W. 6.

The **NEXT EXAMINATION** for **FOUNDATION** **SCHOLARSHIPS** will take place on Tuesday, Wednesday, and Thursday, July 4, 5, and 6. These Scholarships exempt the Holders from payment of Tuition Fees. Application should be made to the High Mistress at the School. The last day for the registration of Candidates is Friday, June 16.

SOLIHULL SCHOOL, WARWICKSHIRE.

SCHOLARSHIP Examination for boys between 12 and 14 is held annually in June.

Full particulars (and Prospectus, &c.) can be obtained on application to **W. F. BUSHELL, M.A.**, Head Master.

Scholarships—continued.

TONBRIDGE SCHOOL.—Scholarships Examination on June 6, 7, and 8, 1922. One Scholarship of £100 p.a., one of £80 p.a., and one of £40 p.a., and not exceeding six Foundation Scholarships entitling to exemption from payment of the Tuition Fee, will be offered for competition. Entry Forms, &c., of intending candidates must be received at the School on or before May 20, 1922. For particulars, apply to the **SECRETARY** to the **HEAD MASTER**, School House, Tonbridge.

WESTFIELD COLLEGE.
(UNIVERSITY OF LONDON.)

Chairman of Council:
T. W. H. INSKIP, Esq., K.C., M.P.
Principal: **Miss E. C. LODGE, M.A., F.R.Hist.S.**
FOUR SCHOLARSHIPS, one of £75, the others of £50, will be offered for competition in March, 1923. A certain number of **EXHIBITIONS** may also be awarded.
Students are prepared for the Arts and Science Degrees of the University of London.
Fees.—Residence £90 a year; Tuition from 38 guineas a year.
For further particulars apply to the **PRINCIPAL**—**WESTFIELD COLLEGE, Hampstead, N.W. 3.**

Scholarships—continued.

WEYMOUTH COLLEGE.

SIX SCHOLARSHIPS for **CLASSICS**
or **MATHEMATICS**,

of the value of £40 downwards, and open to boys between twelve and fourteen,

are offered annually or
Competition.

Next Examination will be in June, 1922

For Prospectus and other information apply to the **HEAD MASTER**.

WYCOMBE ABBEY SCHOOL,
BUCKS.—An Entrance Scholarship Examination will be held in May, 1922. **TWO** **SCHOLARSHIPS** will be offered of the value of £60 each per annum. Candidates must be under 14 years of age on May 1, 1922, after which date no entries can be received. For particulars apply to the **HEAD MISTRESS**.

A LIST OF SCHOOLS.

[Cost of insertion under this heading sent on application.]

NORTH OF ENGLAND.

THE
CALDER GIRLS' SCHOOL,
Seascale, Cumberland.

Mountain and Sea air,
dry, bracing, and sunny.

The aim is to give a sound education to Girls on Public School lines.

One of the six houses is set apart for Juniors under 14 years of age.

Well equipped classrooms, laboratory, gymnasium, and good playing field.

Illustrated Prospectus on application to the Head Mistress.

WOODARD SCHOOL.
SCHOOL OF S. MARY AND S. ANNE, ABBOTS BROMLEY, RUGELEY, STAFFS.—Public Church of England School for gentlemen's daughters. Separate boarding houses. Beautiful country; pure, bracing air. Extensive playing fields. Preparation for Universities. Oxford and Cambridge Joint Board examinations. Associated Board and Royal Drawing Society examinations. Fees from £135 a year. Head Mistress: **Miss MARCIA RICE, M.A.**

ST. JOHN'S HIGH SCHOOL,
NEWPORT, MON.

PUBLIC SECONDARY BOARDING AND DAY SCHOOL FOR GIRLS. Recognized by the Board of Education. Healthy situation on Stow Hill, close to open country and fine scenery. Staffed by University women. Preparation for public examinations and University Entrance. Music, dancing, painting, physical training, games; good playing-field. Domestic science. Good accommodation for boarders. Moderate fees. Reduction for daughters of clergy. Apply—Head Mistress, **Miss E. G. WILKINSON, B.A.** (London).

NAUTICAL COLLEGE, PANG-BOURNE.

Primarily for training officers for Mercantile Marine. Age: over 13 years and under 15 years 6 months. Fees: £160 p.a. Subject to Admiralty regulations, nominations to Royal Naval College, Dartmouth, and for R.N.R. training as Probationary Midshipmen; preparation for Special Entry into Royal Navy.

Early application should be made to Messrs. **DEVITT & MOORE**, 12 Fenchurch Buildings, London, E.C. 3.

The Chalet, Posenhall, Suffolk (Preparatory School)

PREPARES boys for the Public Schools, Navy, Army, Civil Service, and Universities. Boys are accepted at any age, and the Preparatory is kept entirely separate.

Backward and delicate boys receive every attention. Fees are very moderate, and special reductions are made for the sons of naval and military officers, members of the clerical and scholastic professions, those killed in the war, and for brothers.

THE DOWNS SCHOOL,
SEAFORD, SUSSEX.

Head Mistress:

Miss LUCRETIA CAMERON,

Honour School of Modern History, Somerville College, Oxford.

ASHETON MODERN PREPARATORY SCHOOL, TENTERDEN, KENT. Entire charge if desired.—Apply for prospectus, or vide Public Schools Year Book, 1921.

HEREFORD CATHEDRAL SCHOOL.—There will be some vacancies for Summer Term, commencing May 5. (See advertisement Scholarship section.)

Special School for Backward Children.

PRIVATE Residential School for children needing individual help with lessons. Usual school subjects. Modern methods. Highly-qualified staff. Specialist for Dancing and Physical Exercises. Resident Medical Officer. Country surroundings. Grounds 5 acres. Sunny aspect. Fees from £100. No extras. Prospectus from **Miss MARION BRIDIE**, The Vineyard, Longbridge Lane, Birmingham.

Training Colleges
and **Technical Schools.**

See also pages 189-195, 227, 229, 240;
[Halls of Residence] 190, 240, 244;
[Physical Training] 191, 193, 217;
[Scholarships] 194.

ST. ANDREWS UNIVERSITY.

Dundee School of Social Study and Training.

Chairman:
PRINCIPAL OF THE UNIVERSITY.

Training Course for Students desirous of making social work their profession. Courses for graduates and non-graduates. University Diploma. Students are trained to become Welfare Workers. Club Leaders. After-Care Committee Workers. Property Managers, &c., &c. There is accommodation for resident students at the Settlement.—For Syllabus, apply to the **SECRETARY**, St. Andrews University, or the **WARDEN**, Grey Lodge Settlement, Dundee.

UNIVERSITY COLLEGE,
READING.

DEGREE COURSE IN AGRICULTURE FOR
INTENDING TEACHERS.

Students of the College receiving grants under the Regulations of the Board of Education for the Training of Teachers are now permitted, if suitably qualified, to take the London B.Sc. Degree Course in Agriculture (as an alternative to a course in Arts or Pure Science). Further particulars may be obtained from the Registrar.

FRANCIS H. WRIGHT,
Registrar.

INTERNATIONAL GUILD,

6 RUE DE LA SORBONNE, PARIS

(sous la direction de professeurs agrégés de l'Université de Paris),
offers to Students, especially those intending to be teachers, a sound training in the **French Language**. Classes are held in

French Literature, History and Phonetics, Grammatical Commentary, Translation and Lecture Expliquée.

Preparation for the
Certificat d'Etudes Françaises of the Sorbonne. Diplôme d'Etudes Françaises of the Guild.

Simpler course for less advanced students. A speciality is made of exchange lessons and social intercourse with the students of other nationalities.

ROYAL HOLLOWAY COLLEGE
(UNIVERSITY OF LONDON.)

PRINCIPAL: Miss E. C. HIGGINS, B.A.

The Easter Term commences on Monday, May 1, 1922. The College prepares Women Students for the London Degrees in Arts and Science.

For further particulars, apply to the **SECRETARY**, Royal Holloway College, Englefield Green, Surrey.

Continued on page 240.

TEXT-BOOKS ON BIOLOGY AND NATURE STUDY

TEXT-BOOK OF BOTANY.* By J. M. LOWSON, M.A., B.Sc., F.L.S. *Fifth Edition, Revised and Enlarged.* 9s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

"This is a first-rate volume and its usefulness has been demonstrated by the number of editions through which it has run."—*Guardian*.
"It represents the nearest approach to the ideal botanical text book that has yet been produced."—*Pharmaceutical Journal*.

BOTANY FOR MATRICULATION.† By FRANCIS CAVERS, D.Sc. 8s. 6d.

This book is specially adapted to the best modern methods of teaching the subject, and covers the requirements of the London University Matriculation Syllabus in Botany.

"The prominence given throughout to ecology and physiology, the very exact instructions for experiments and the examination and sketching of specimens, and the constant insistence on the student's personal contact with the fundamental facts of the science make the book a sound introduction to botany."—*School World*.

SENIOR BOTANY.† By FRANCIS CAVERS, D.Sc. *Second Edition.* 6s. 6d.

A school course of Botany in which great stress is laid on outdoor and indoor observation and experiment. The standard is that of the Oxford and Cambridge School Certificate Examinations.

"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature*.

SECOND STAGE BOTANY. By J. M. LOWSON, M.A., B.Sc. *Fourth Edition.* 6s. 6d.

"The book is good throughout. The illustrations are excellent."—*The School World*.

THE AIMS AND METHODS OF NATURE STUDY.

A Guide for Teachers. By JOHN RENNIE, D.Sc., F.R.S.E., Lecturer in Natural History in the University of Aberdeen. With an Introduction by Professor J. Arthur Thomson. 5s.

"We have nothing but praise for this comprehensive and practical volume. It is just the book for the teacher who wishes to make his teaching really objective and practical."—*Schoolmaster*.

LIFE HISTORIES OF COMMON PLANTS.† By FRANCIS CAVERS, D.Sc., late Lecturer in Biology at Goldsmiths' College. 4s. 6d.

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

"The author is to be congratulated on the excellent features of his book, a clear diction, a logical sequence, and a recognition of the essentials."—*Nature*.

PRACTICAL BOTANY. By FRANCIS CAVERS, D.Sc. *Second Edition.* 6s. 6d.

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

"Much careful information is given on the management and preparation of material, and a hundred and one points connected with laboratory practice which bewilder the untaught student."—*The Journal of Education*.

PLANT BIOLOGY.† By FRANCIS CAVERS, D.Sc. 6s.

This is a text-book of Elementary Botany arranged for modern methods of teaching, specially suitable as a school course of Botany. Chief emphasis is laid upon a course of practical work which will provide a sound basis for theoretical knowledge.

"The freshness of treatment, the provision of exact instruction for practical work really worth doing, and the consistent recognition that a plant is a living thing, should secure for Professor Cavers' book an instant welcome."—*The School World*.

JUNIOR BOTANY. By FRANCIS CAVERS, D.Sc. 4s.

Suitable for use in Junior forms: encourages observation and experiment on living plants, and the study of adaptation to environment. Every endeavour is made to stimulate the pupil's individual activities.

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.

"Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

FIRST STAGE BOTANY. By A. J. EWART, D.Sc., F.L.S. *Second Edition.* 4s.

"The arrangement and treatment of the subject are excellent. The book will be found suitable for all beginners."—*Secondary Education*.

SCHOOL LESSONS IN PLANT AND ANIMAL LIFE.

By JOHN RENNIE, D.Sc., F.R.S.E. 6s. 6d.

This book contains a course of eighty lessons in Nature Study, with full guidance to the teacher as to how to learn and how to teach the subject.

"This very comprehensive volume is one of the most useful nature-study handbooks for teachers which we have yet seen."—*London Teacher*.

A FIRST COURSE IN PLANT AND ANIMAL BIOLOGY.

By W. S. FURNEAUX. 3s. 6d.

The object of this book is to provide young beginners with a course of Nature Study in touch with scientific methods.

It contains a simple yet practical treatment of selected types of plants and animals.

"A very attractive introduction to the study of plant and animal life."—*Schoolmaster*.

* Two sets of microscopic slides designed for use with this book are obtainable. Set A—*Angiosperms*, 86s. net; Set B—*Gymnosperms and Cryptogams*, 86s. net

† A set of microscopic slides specially designed by Dr. Cavers for use with his books is supplied at £1 10s. net

Complete Catalogue of Books post free on application.

OCCASIONAL NOTES.

MR. FISHER'S speech at Kingston is evidently intended to be reassuring to educationists. But the policy which he outlines will demand searching examination before it can meet with anything like general approval. The preposterous proposal to make a cut of eighteen millions in the education estimates has indeed been defeated. But even now the Government put forward as their policy a cut of six and a half millions, that is to say, they propose to reduce the education estimates by one-eighth. As the Bishop of Manchester has pointed out, this sum is a large one, and if six millions instead of eighteen millions had been mentioned in the first instance, the outcry of protest would probably have been just as insistent. A close scrutiny of Mr. Fisher's speech invites questions which demand very definite replies. The Minister for Education, while agreeing that the method of financing Local Authorities demands the fullest investigation, says that in the meantime the present grant system continues. This is reasonable. But there is to be a certain rationing of Local Authorities. The grants will be related to a total maximum expenditure both for primary and secondary education. This must be considered in connexion with another part of the speech, where the fact is emphasized that the Burnham agreement is one between Local Authorities and Teachers, and not between Teachers and the Government. Authorities which continue to pay upon the allotted scales may count upon the Board honouring its part of the bargain. But the Board does not say to the Authorities, "You must pay upon the scales formulated by the Burnham Committee." If then the grants are reduced, without

this stipulation being made, will not some Local Authorities be tempted to modify the Scales with a view not only to keep within the ration but also to reduce the rates?

IT has been too readily assumed that teachers will consent to a contributory scheme of pensions. It is true, as Mr. Fisher says, that salaries have risen since the passing of the Superannuation Act. But it is undeniable that when the Burnham Scales were accepted, their effect on pension rights was taken into account by the teaching profession, and that therefore the agreed scales are lower than otherwise might have been the case. Moreover, it is decidedly one-sided to suggest that teachers, alone among public servants, should have to contribute towards a pension fund. If the state of the national finances is such that a contributory scheme is necessary, why should this be not applied all round? If the Lord Chancellor will contribute, if every Civil Servant will contribute, if every naval and military officer will contribute, then so will the teacher. But all indications point to vigorous opposition being offered to the discrimination which is apparently contemplated.

MR. FISHER'S pronouncement on the size of classes is unsatisfactory. In more than half the classes in elementary schools the average is already between 40 and 50 pupils; in one-fifth of the classes the average is over 50. In what part of the country are the areas where the staffing arrangements are "on a somewhat lavish scale"? The plain fact is that the classes are too large already and that in many of them efficient teaching is impossible. No decrease in the number of teachers can be reasonably attempted. And if places are not found for the teachers at present in the training colleges there will be a renewed reluctance to enter the teaching profession, and an early return to the alarming shortage of teachers which has been such a disquieting feature of the last few years.

IT is difficult to understand how Mr. Fisher has been able to convince himself of the necessity of suspending the further development of secondary education. Apparently not only is no effort to be made to meet the growing demand for secondary education, but the demand itself is to be stifled by increasing fees. Thus we return to the once-prevalent idea that secondary education is a luxury to be enjoyed only by the few. No educationist can let this pass without protest. Our primary education is largely nullified because it is not followed up by secondary education. If we wish to stop waste we should increase the number of our secondary schools. The years from 14 to 16 are as important in school life as the whole of the years from 7 to 14 put together. There is nothing to prevent the best use being made of these years except the peculiar brand of commercialism with which the education section of the Geddes Report is tainted, and which seems to affect the mentality of so many of our "business" men. We may be, after the war, a disillusioned people; but there is still the determination that our children shall have better opportunities than we had, and there will be resistance to any attempt to make them suffer from the catastrophe which their fathers were powerless to prevent.

THERE is a suggestion in the concluding paragraph of the speech that the good will and confidence of ordinary men and women will be forfeited if teachers fail at this crisis to rise above the level of purely professional interests to an intelligent appreciation of a great national issue. There will be no such failure. But it is the very greatness of the issue which compels teachers not to relax their vigilance. The easy path would probably be to say that if salaries are safeguarded, other "economies" should not be opposed. But the teaching profession is too acutely conscious of its duty to the children to do anything of the kind. They will offer full opposition to making the children pay for the war in any shape or form. Classes should not be enlarged—on the contrary they should be reduced in size at the first opportunity. Medical and dental facilities must not be curtailed. Defective children must be properly cared for. While the educationist may rejoice that the frontal attack on education has for the moment failed, he must be on his guard against those who will attempt to secure the same result by more insidious means. Mr. Fisher's task in combating the attack is not an enviable one, but he possesses in no small degree the confidence of the teaching profession, and he can rely on their earnest co-operation with his efforts.

**The Attitude
of the
Teachers.**

A ROYAL Commission is an expedient for crystalizing a movement of the public mind. It may review a comparatively small area such as is now allotted to the Asquith Commission on Oxford and Cambridge, or it may tackle a vast field of endeavour, such as fell to the lot of the Bryce Commission on Secondary Education. It might be regarded as a study circle *in excelsis*, collecting relevant opinion from all quarters and illuminating this with the ripe experience of the best minds. Problems of education seem to be specially suited to such treatment, for while they include the collection of information of facts, statistical and other, they demand quite as much that these facts shall be set out in the light of large ideas relating to national life and purpose. Obviously, such inquiry and report is needed. The general public is certainly moved by anxiety about the work of schools and colleges; and this interest has been stimulated by action and re-action following on the upheavals of the years 1914 to 1918. First of all the Act of 1918 stimulated hopes and gave promise of ideals to be fulfilled; thereupon the Geddes axe, along with the restrictive policy pursued by the Treasury since 1920 has served as an irritant, creating unrest in every corner of national life where education penetrates. From Government quarters it will probably be pointed out that the duty of inquiry has been allotted by law to the Board of Education, whose officers (partly as the result of the Bryce Commission) are largely concerned with looking into the needs of education up and down the country. The Inspectors in early days were exclusively employed in examining scholars or teachers; they still do this to some extent, but they have more and more assumed the functions of commissioners, and the ablest of them undoubtedly possess a fund of information and experience which the country could not dispense with. But, after all, they are biased. They cannot help being bureaucrats; they have grown up in the system devised by Morant and others since 1902, a system in which, although

**A Royal
Commission on
Education.**

large scope is given to the Local Education Authority, the power of the Board, willy-nilly, has steadily increased.

THE real objection to any such Commission is the vast range which it would have to cover. The Commission would, virtually, have to expound a philosophy of the English people, a view of our evolution since the '70s, when we first set to work to employ schools and colleges as deliberate agents in the control of national destiny. "Who is sufficient for these things?" It would be a fine, "sporting" adventure for the nation to undertake; we say "the nation" for, whoever appointed the Commission, the entire population—those, that is, who really think about national progress—would watch the enterprise from month to month. Even if nothing practical came out of the finding of the Commissioners, the very attempt to undertake so vast a study would serve to quicken national interest in education, and help all who care for education to pursue their mission. On a smaller scale this has already happened in the case of "English" studies. There can be no question that the Committee which Mr. Fisher appointed to deal with that field of study has aroused a most lively interest in all sorts of quarters; what has been done in one corner of the field can—or at least might—be done for the whole.

**The Probable
Effect.**

A MEMBER of the Court of the University of Wales, Councillor G. Arbour Stephens, M.D., who is also a member of the Swansea Education Authority, suggests, in *The Western Mail*, February 24, that all teachers in elementary and secondary schools in Wales should become Civil Servants and be placed under a Civil Education Commission for Wales. His belief is that the centralizing of educational administration and the abolition of local educational authorities would effect great economies in finance. A central office at Swansea (say) would take the place of all the local educational authorities in Wales. As an example of how such an organization would work he quotes the Post Office. Other advantages of such a system, we are told, are the greater choice in selecting teachers, and the "standardization" of their qualifications, the disappearance of local wirepulling in the case of appointments, promotion according to efficiency, the elimination of the uncertificated teacher. Apparently there is some confusion in the mind of Councillor Stephens. The centralization of educational administration does not necessarily mean the adoption of a scheme of Civil Service. You can have the one without the other. While there may be good reasons for creating larger areas for administration purposes the teaching profession will be wise if it shows a profound distrust of the suggestion to convert its teachers into Civil Servants. Not only would the teacher's freedom of action be curtailed but the individuality of schools, one of the characteristics of our educational system, would be seriously undermined. Bureaucracy has shown little evidence of adaptability to the ever-changing demands of education. As a member of a University Court, Councillor Stephens ought to know that education is not like sorting letters and distributing stamps. Here uniformity may be a merit; in education it would be the reverse. We note that the Councillor carefully refrains from suggesting

**Teachers as
Civil Servants.**

that University teachers should be included in his scheme.

WE welcome the birth of the new "Parents' Association," and we think that many Heads of schools will echo this welcome. The only misgivings we have, arise from a fear that the Association may be run on wrong lines. If it is guided by common-sense we have every reason to hope that it will be fruitful of excellent results. But there is a danger of such an organization falling into the hands of cranks and faddists, of people who know nothing of how schools are run, and take no trouble to find out. They look for an entirely utilitarian form of education, without knowing or caring what education, in the fullest sense of the word, is best for their children in the long run. They talk glibly of high fees and fortunes made by schoolmasters, without having the haziest notion of the economics of school-keeping. They theorize on children's health, and, in the holidays, transform a child in the pink of condition into a pasty-faced lump by late hours and injudicious feeding. They write to *The Times* about the dietary of boarding schools, and at home stuff their children with rich dishes and cream buns, so that their digestions are only saved by their return to school where their overloaded stomachs may be given a rest and a change to what is wholesome. If the "Parents' Association" will give such cranks a wide berth, but discuss suggestions with school authorities with common-sense and open-mindedness, it will grow into an association to which schools, parents, and children alike will owe a great debt.

THE organizers of the new "Parents' Association" were a little unfortunate in their choice of the principal speaker at their inaugural meeting. Sir Rennell Rodd leaves us with the impression that by some mischance he devoted too much time at Haileybury to Latin Grammar, which, to use his own words, "created a permanent distaste for any other form of knowledge." To this we must attribute his mistaken impression of present day education. If he looked into a school nowadays and heard the boys of all ages talking on every conceivable subject, games, politics, their own future careers, or anything that comes into their minds; if he took the trouble to see some of the papers set in public school scholarship examinations, the English paper at Winchester for instance; if he studied the Curriculum Report of the Head Masters' Conference, on which many preparatory schools base their teaching; if he did any or all of these things, he would, we believe, have totally different views about education in this country, of which at present he is evidently misinformed, however much he may have studied education on the Continent. He would find, amongst other things, that schoolmasters realize that education includes discipline as well as instruction.

A CIRCULAR (No. 1251, dated February 22nd) issued by the Board of Education, marks a welcome improvement in the position which Manual Training occupies in the educational system of the country and develops the plan adumbrated in Circular 1177. In paragraph 6 of the earlier circular, it was proposed to

introduce such modifications into the syllabuses of the "Certificate" and "Preliminary Certificate" examinations as would, without lowering the general standard, make them more suitable for the special requirements of handicraft teachers. Circular 1251 announces arrangements by which candidates who pass certain handicraft examinations undertaken by the City and Guilds of London Institute are exempted from special groups or subjects in the Board's examination for the Certificate. These show that the Board of Education have studied and, to a large extent, endorse the policy recommended by the National Scheme of Handwork Committee and issued as an interim report by that body of experts.

HITHERTO, one of the weak links in our educational system was that due to the difference in status of "instructor" and "teacher."

When our manual "instructors" become teachers of handicraft, the weak link is strengthened. The Board of Education now seem to recognize that

handwork is an indispensable element in a complete education and that a new conception of the function of instructor is desirable. The fundamental necessity of the new teacher is, obviously, efficiency in some craft: mere empiricism is valueless. This efficiency must involve a real grasp of principle as well as ability to criticize and illustrate a piece of work in all its details, so that knowledge of the psychology of the child mind must be linked with the technique of lesson-giving and a good general education. In practice, Circular 1251 should afford some test of the finished product. But since the training of the future teacher of handicraft must be on the same broad lines as that of any other teacher, and since there must be equality of status and scope if the full educational value of the work is to be developed, we should welcome a further circular suggesting such modifications of the training course as would lead all teachers to give the subject of manual training that sympathetic consideration its importance deserves.

ONE reads the London County Council's Report on Education in the metropolis during 1920 with mixed feelings. Regarded in itself, and apart from the melancholy effects of the financial difficulties which began to disturb the public mind before the close of 1920, the educational work of the Council during that year must extort admiration from the most grudging of critics. In every department "Forward" was the Council's watchword. Most of the new developments received attention in these columns at the time, but it will be useful to recapitulate them briefly. Notwithstanding adverse conditions, too well known to need description, the re-modelling of out-of-date school buildings was vigorously proceeded with; twice as many school journeys were authorized as in any previous year; the whole cost of educational visits was undertaken by the Council; about 150,000 children were enabled to see Shakespeare's plays, suitably staged and acted; school libraries were carefully organized on a definite plan; lectures to teachers were revived with such success that the number of applications to attend rose to 18,500, the highest on record; the number of aided secondary schools rose from 39 to 49; and the day continuation schools made a most promising start.

We can only express the fervent hope that the Council's plans, so well begun but so grievously interrupted, may yet be realized.

THE New York *Nation* which, like its English counterpart, is conspicuous in its depreciation of the quality of "nationality" (unless the nationality happens to be Irish), has an interesting article in its issue of March 1, on "History and International Goodwill," from the pen of Prof. H. E. Barnes, of Clark University. The writer begins by quoting the words of Henry Morse Stephens concerning "the dreadful result of exaggerated nationalism as set forth in the patriotic histories of some of the most eloquent historians of the nineteenth century," and concludes that "the past modes of teaching and writing history have been among the most influential factors in creating belligerent national attitudes and in glorifying the nature and achievements of war." The Germans, he admits, have been the worst offenders in respect of both excessive nationalism and rabid militarism; but he holds that few peoples are wholly innocent. As to our own folk, he considers that "the fact that Kipling is co-author of a much-used English text-book of history would, if it were needed, be a sufficient commentary on the status of the teaching of history in English schools."

PROF. BARNES, however, does not pursue the theme of history teaching in English schools. He devotes the main part of his discourse to the delinquencies of American historians, and what he says makes extremely edifying and diverting reading. He points out how their patriotic prejudices have led them persistently to distort the truth in their narratives of the relations of America with the rest of the world. In particular, with reference to England, he goes so far as to say that no text-book would be a financial success if it told the essential truth regarding any important phase of Anglo-American history. Prof. Barnes concludes an impressive and courageous article by pleading first for historical impartiality, secondly for a world-outlook, and thirdly for an enlargement of the scope of history so as to include social, economic, and intellectual aspects.

SINCE the passing of the Education (Scotland) Act in 1918, the prospect of an extension of the ordinary school age to fifteen has concentrated the attention of Scottish educationists on the re-organization of post-primary school arrangements. Out of much discussion has emerged agreement that neither the Supplementary nor the Intermediate Course—which are the present alternatives for pupils who prove their fitness for more advanced instruction by passing the Qualifying Examination about twelve—are quite satisfactory. The Intermediate Course, being part of a full secondary course, tends to be too "bookish" for some of those who go only half way. The Supplementary, on the other hand, tends to be too practical, even when it is not spoiled by the stigma of social and mental inferiority. The recent Circular of the Scottish Education Department must be read as an attempt to solve the problem. It sets forth two main proposals: (1) that the oversight

of the Qualifying and Intermediate Examinations should pass from the Department to the Local Education Authorities, and that the latter should put the responsibility for the transfer of pupils at the different stages on the teachers immediately concerned; and (2) that all pupils not going on to the full secondary course are to be dealt with in non-secondary schools and continuation classes—three years of the one and a year of the other—and that the non-secondary courses are to be as far as possible separate from the secondary.

IN spite of the distracting influence of the "economy" threat, these proposals have been discussed up and down Scotland, and the verdict on them is unusually clear. Everybody is content to let the old Qualifying Examination go, and leave the transfer of pupils to Authorities and teachers. But all the teachers and most of the Authorities are up in arms against the rigid distinction of secondary and non-secondary scholars. What they seem to want is a variety of Intermediate courses of equal standing, leading up to a national Intermediate certificate. The report of the National Advisory Council, which is expected at an early date, is believed to contain concrete recommendations on these lines. On its appearance, the battle will be renewed, unless the Department before that time have declared that, for lack of money, neither their own scheme nor that of the Council is practicable just now.

THE FUTURE OF EDUCATION IN IRELAND.

(Concluding Article.)

IN our previous article we discussed the future of Education in Ireland from a general point of view, and we saw that for the present the partition of the country will lead to the pursuit of different ideals in the North and South, while the administration of education in both will probably run on the same modern lines which have become familiar in other countries. We shall in this article treat of more specific topics, the position of the teachers, registration, finance, correlation, local control, syllabuses.

The importance of the teacher, more particularly of the assistant teacher, and of the lay teacher, has grown considerably in recent years and, while twenty years ago the Vice Regal Commission on Intermediate Education was able to ignore the claims of teachers to consideration, and could proceed upon the assumption that the introduction of inspection into Secondary Education would be a panacea for all its defects, the Vice Regal Committee of 1918 placed in the very forefront of its recommendations 'The great and urgent need of improvement in the salaries and security of tenure of intermediate teachers.' This recommendation, which will one day be recognized as the charter of Irish intermediate teachers, has not yet been carried into effect, but it is now treated as a truism, and there is full recognition on all sides that among the many reforms of education it must take a prominent position.

So glaring indeed was the case of intermediate teachers that almost all recent Chief Secretaries felt themselves compelled to throw to them various sops which, always insufficient, served no other purpose but to accentuate their grievance. At the present time the average annual salary of a lay assistant teacher in an Irish Intermediate School, inclusive of all grants, is less than £200. In England it is considerably over £300. In both South and North attempts are being made to improve this, and both Governments have agreed that Sir Hamar Greenwood's

last 'Interim grant' of £50,000 should be doubled for the present year. Next year it is hoped that the Irish Parliaments will be able to agree to measures of reform which will include provision for adequate salary scales and pensions for intermediate teachers. The salaries of primary teachers were placed upon a satisfactory basis two years ago, but their pensions still require to be dealt with, while the case of teachers in technical schools will also come up for consideration.

In the North of Ireland the Minister of Education has raised the question of intermediate schools working for private profit as a difficulty to be considered, and there are no doubt other difficulties that will arise under a more centralized scheme of control, such as the overlapping of schools in various areas, but all anomalies cannot be remedied at once. By itself the firm establishment of the great principle of a well paid and highly qualified teaching profession will do more than anything else to improve Ireland's future education. There is already in operation an excellent scheme of registration for secondary teachers, nearly 3,000 of whom are already on the register. It is true that the majority of these have been admitted to registration under transition conditions, as was inevitable at the first establishment of the register; but in 1925, when the permanent regulations will come into operation, the requirements for every intermediate teacher will be (1) a University degree or its equivalent, (2) a University diploma in teaching, and (3) three years' satisfactory experience in teaching. If the life prospect is adequate to attract teachers to satisfy those conditions, the development of Irish education in the next generation cannot fail to be remarkable.

It will be necessary to spend money on education. Will the country agree? It is not merely a question of teachers' salaries and pensions. At the present moment, for reasons easily comprehensible, the minds of many teachers have not advanced much beyond this, but much more is necessary. Many of the buildings in Ireland in which education is carried on need to be rebuilt. In recent years fine buildings have been erected in Dublin and elsewhere for higher education, but little has been done for primary and secondary schools, which in many instances compare very unfavourably with those of other countries. Not that bricks and mortar make education, but a high ideal should be worthily housed.

Adequate school equipment is also essential, and if Ireland is really in earnest about educational reform, she will not be content with less than the best. But there will be many demands for money in the new Ireland; as elsewhere, politicians will be looking for votes, and teachers have never been a political force. But the friends of education may urge that it has been starved in recent years; even in the last three years Ireland has received from the British Treasury less than her fair share by more than a million pounds, and she may therefore put forward a preferential claim over many other interests. One thing at least is certain in secondary education; all the grants hitherto made in so many different ways will be consolidated and no longer will any part of them be paid as results fees dependent upon the examination of individual students.

The basis of payment will be a capitation grant from the central authority. Will there be also local grants? and, as a corollary, local control? This is uncertain. It was proposed in Mr. Macpherson's Bill for Primary Education, with limitations designed to prevent interference with denominational management; but the feeling in the North and South is different on this question. In the North the desire for local authorities and local control after the English model has always been strong. The aim there has been for undenominational education. In the South the feeling has been the reverse. The distinction is largely due to the different attitudes towards religious teaching, but the solution will probably be found in a compromise, and the religious difficulty, so called, will

prove easier of solution under an Irish than under an English government. Ireland is, after all, a small country, and divided into two, the sections are, of course, still smaller.

One of the leading motives towards local control in a country like England was the difficulty of managing a large number of schools scattered over a wide area inhabited by large populations with varied outlooks and ideals. Another leading motive was the creation of local interest. This, however, should be amply secured by the existence of national Parliaments where educational estimates would be freely discussed, whereas local committees having large powers and possessing liberal views on the different branches of education would in many parts of the country be difficult to set up. We shall therefore be likely to see no local control as in England, but a single central authority controlling the whole country, assisted by advisory committees representative of various local interests and of those actually engaged in educational work of different kinds. Especially is this necessary in secondary education, as with the scattered population of large parts of the country and the sparseness of middle-class families, something broader than a local outlook will inevitably be essential. This will also render the financing of education easier. With a national tax rather than local rates, the task of administration will be appreciably simplified. Another great need in Irish education is the proper correlation of its different branches.

In an ideal state primary education will be the foundation and will lead up to secondary and technical education, and these again will be continued into university and higher scientific and technical education. The theory is simple, but the task of working it out in practice will not be easy nor quickly accomplished. It is one for a great organizer. Hitherto the various sections—primary, secondary, technical, university—have been practically independent. The Intermediate Board, for example, had no cognisance, even in Intermediate Schools, of any pupils under twelve years of age. Already primary teachers are putting forward a claim that the proper age for transference from a primary to a secondary school should be fourteen, and are urging that the secondary schools should adapt themselves to this in drawing up their programmes. It is hard to believe that such a claim will be allowed, but it illustrates the difficulties that will arise. Again, primary schools must in the main be of a similar pattern.

There may be variations between town and country schools. In the latter recognition will be taken of the claims of agriculture as Ireland's leading industry, and the readers used, and the arithmetic taught in them, will aim in part at creating an intelligent interest in country pursuits, but the leading aim will naturally be to teach reading and arithmetic and other subjects everywhere essential to primary education. In the highest education of all, in universities, there are various schools, and in the higher technical and scientific colleges there are a large number of different branches.

What about the secondary schools? Under the Intermediate Board attempts to create a variety of types have not been very successful, and speaking generally, all secondary schools are very much alike. Is this to continue, or are we to have various classes of secondary schools as in France and Germany? How is the type suitable for various localities to be defined? Is it to be done by the central authority or will schools be allowed to adapt themselves? Will secondary schools be entirely distinct from primary? Or will the distinction be abolished? Or shall we have distinct primary and secondary schools in some localities, and primary schools with a higher division, a higher primary or continuation school, practically a secondary school, in other localities? Too much rigidity is undesirable. Freedom is the essence of education, but there has been little freedom in the schools hitherto, and adaptation to new conditions is not always easy.

Both in the North and in the South the Governments have recognized the need of the reorganization of education. One of the first acts of Sir James Craig's administration was the appointment of a committee representative of all sides to make a report on necessary reforms, and an Act of Parliament is promised embodying their suggestions at the earliest possible date. The committee is unfortunately a large one consisting of between thirty and forty members.

In the South, Dail Eireann, about a year ago, several months before the truce, appointed a Commission on Education, and its work has been continuous ever since. It has drawn up a report on Primary Education and it has appointed a number of sub-committees dealing with the different subjects of both primary and secondary programmes, mathematics, English, Irish, modern languages, art, music, commerce, science, manual training, history, and geography, economics and sociology; a committee to co-ordinate the work of primary and secondary schools, and a standing committee on secondary education to consider the reports of the various sub-committees and to draw up a scheme of education for secondary schools to take the place of the present intermediate system. The Commission has not dealt with the financial side of the question. It had by the end of last year issued a number of draft reports, and asked for criticisms, and from the published result of its work a fair idea of the general tendency of its scheme can be gathered. This is as follows: The present three intermediate examinations, junior, middle, and senior grades, will give place to two, one at 15-16 corresponding to what is usually known as a junior certificate examination, and the other at 18, which may be called a senior or final certificate examination. Irish is to be at least on a level with English, but neither is to be obligatory against the wishes of the majority of the parents of the children in any particular school. In primary schools, on the other hand, Irish is to be compulsory, and to be taught at least one hour every day. Further, in secondary schools no grants are to depend on written examinations, and teachers are to have the greatest possible freedom.

It is a good sign to see both Irish Governments taking an early and active interest in education. Our education has been backward and we have now a chance of redeeming our past reputation. It is a cause for regret that Ireland should have two systems of education, more or less antagonistic, but in education, as in other matters, common interests may eventually bring the country under a common system, to the increased benefit of the whole community.

THE PSYCHOLOGY OF "HOWLERS."

By C. M. BOWEN.

PROFESSOR ADAMS, speaking at the conference of Educational Associations held recently in London, suggested that the psychology of pupils' "howlers" was well worth studying, and anticipated the publication of an elaborate scientific treatise on the subject some day. This article does not profess to be more than a very slight and somewhat superficial contribution to the literature of the subject, but it may be of some interest as being based on genuine "howlers" which have come within my own experience or the experience of other teachers personally known to me. Most of the examples given are taken from papers on literature and general knowledge—a fertile field for the production of ludicrous mistakes.

A certain number of "howlers" are due to an inadequate command of language on the part of the writer, who has the right idea, but expresses it so awkwardly that he conveys something quite different from what he intended to say. Two examples of this may be taken from a paper on "The Merchant of Venice": "When reading the play, one is filled with the vileness of Shylock's character"; and "There is some excuse for Shylock's want of revenge

against Antonio," "want of" being here used in the sense of "desire for." The English language, with its many varieties of shades of meaning, is full of pitfalls of this kind for the imperfectly educated. The definition of an epigram as "a part of speech" is a mistake of the same kind, if, as I suppose, the writer meant to say "a figure of speech."

A commoner kind of mistake is due to the confusion of two words of similar appearance or sound, but different meaning. Thus the pupils who defined "illicit" as "ill-read, ignorant" and "clear or plain" must have been thinking of "illiterate" and "explicit" respectively; while the girl who gave "not clear" for the same word was, on her own confession, really thinking of "illegible." The definition of an epitaph as "a short sarcastic poem" was no doubt due to a confusion with "epigram," and was not intended ironically; while "epigram" appeared variously as "Something spoken at the end of a play," "Something put on the outside of an envelope," and "A conundrum," "Monogram" for the second of these, and "anagram" for the third seem to me the most satisfactory explanations. It was perhaps a natural mistake to suppose that the distinction between "factitious" and "fictitious" was that the former referred to something based on fact, and the latter to something imaginary. This appeared in several papers. Other definitions of "factitious" were "troublesome, naughty—applied to a child," and "a person who tries to be funny." One of the most amusing examples I have come across of this kind of mistake was a sentence from a paper on the literature of the eighteenth century: "Much of the poetry of this period was superfluous, and written in very artificial language." It was only my knowledge of the source of this student's information which made me guess that she had meant to describe the poetry as "superficial."

A somewhat similar class of mistake is due to a confusion between two different meanings of the same word. This occurs frequently when the commoner meaning of the word, with which the pupil is familiar, is not the one used in the particular context. Thus the "Three Estates of the Realm" were defined in one paper as "land owned by the Government," and in another as "Windsor, Sandringham, and Balmoral." The train of thought is less obvious in the statement: "The Monroe Doctrine has just started in Scotland, especially on the east coast"; but presumably the writer thought of "doctrine" as meaning a religious belief, and the Scottish flavour of the name "Monroe" made her connect it with the religious revival to which she had recently seen references in the press. I confess I have been unable to classify another description of the Monroe Doctrine as "the theory that we are descended from monkeys," but it is worth recording for its ludicrousness.

Many of the foregoing mistakes might have been avoided if the writers had had a greater knowledge of the derivation of words. This would not, however, have prevented mistakes arising from a confusion of proper names, in which the same psychological processes can be traced as in the examples already given. Thus Lord Northcliffe was described as "British Prime Minister at the time of the American War of Independence," and Lady Astor as "a lady who writes books about her own life." "Auld Reekie" was given as "the name of some hills in the south of Ireland"—presumably Macgillicuddy's Reeks; and the description of Dr. Nansen as "one of the Chinese Ministers present at the Cannes Conference" was no doubt due to a confused recollection of Chinese names in which the syllable "sen" occurs. The student who called Mr. Michael Collins "an author of fiction" probably did not intend any imputation against his political honesty, but was confusing him with the author of "The Woman in White"; I am not, however, sufficiently familiar with the record of sporting events to know whether the description

(Continued on page 204.)

Cambridge University Press

LETTERS ON EDUCATION

By EDWARD LYTTTELTON, M.A., D.D., D.C.L. Crown 8vo. 5s net.

The theories which Canon Lyttelton seeks to expound are here cast into the form of a familiar correspondence between two friends, of whom one is a bachelor and the other the father of three young children, and the main topic of their discussion is the proper training of the young. The result is to advance, as a fundamental requisite of education, the Christian principle that the personal relation to God, as interpreted in Christ, is the only sound basis both for intellectual and moral training.

THE GROUNDWORK OF SOCIAL RECONSTRUCTION

By WILLIAM GLOVER, Author of *Know your Own Mind*. Fcap 8vo. 2s 6d net.

"A little book of condensed wisdom, extremely bright in style, and with that rare gift of simple and popular elucidation of abstract ideas . . . it opens up a new method of intellectual and spiritual approach to minds quite closed against the truth expressed in traditional ways and terms."—*The Sunday School Chronicle*.

THE STORY OF DR JOHNSON

Being an introduction to Boswell's Life.

By S. C. ROBERTS, M.A. Crown 8vo. With a portrait of Johnson. 2s 6d

This book was first published in 1919 and quickly reached a second edition. A cheap school edition is now produced in the hope of introducing a larger circle of young readers to the study, and the charm, of Johnson and his age. Copies of the earlier edition (containing 16 illustrations and a bibliography) may still be obtained, price 5s net.

"Mr Roberts has succeeded," says *The Scottish Educational Journal*, "in painting a wholly successful picture of the Great Cham and his times. . . . No better book could be placed in the hands of pupils in English."

Secondary Education in the Nineteenth Century.

By R. L. ARCHER. Crown 8vo. 12s net. Contributions to the History of Education.

"To any one who desires a description of the educational position in England at the beginning of the nineteenth century, and of the forces that have shaped the course of educational development down to our own time, we cordially commend Prof. Archer's really excellent work. The work needed to be done, and he has done it remarkably well."—*The Journal of Education*.

Selections from Virgil's Georgics. Edited with introduction, notes, and vocabulary, by JOHN MASSON, M.A., LL.D. Fcap 8vo. 4s. Pitt Press Series.

"The present edition is meant to meet the needs of pupils in the higher classes of Secondary Schools and those of the 'ordinary' Latin class in the Scottish Universities. Lovers of Virgil may also find it convenient to have these passages collected."—*From the Preface*.

Seneca and Elizabethan Tragedy. By F. L. LUCAS, B.A. Crown 8vo. 7s 6d net.

To estimate the influence of Seneca and to trace the line of descent from him to the Elizabethans is the main purpose of this book. It is prefaced by a sketch of the rise of the Greek drama, which made him possible, and of the Roman, which led up to him.

The Cambridge Medieval History.

Planned by J. B. BURY, M.A., *Regius Professor of Modern History*. Edited by H. M. GWATKIN, M.A., J. P. WHITNEY, D.D., J. R. TANNER, Litt.D., and C. W. PREVITÉ ORTON, M.A. Vol III, *Germany and the Western Empire*. With 11 maps in a separate portfolio. Royal 8vo. 50s net.

"Will prove indispensable both to teachers and learners. . . . The names of the contributors. English and foreign alike, are a guarantee of sound work, and the whole level is one of scholarship and distinction."—*The Oxford Magazine* on Vols I and II.

Social Life in the Days of Piers Plowman. By D. CHADWICK. Demy 8vo. 10s 6d net. *Cambridge Studies in Medieval Life and Thought*.

Miss Chadwick has collected and arranged under definite headings the details of fourteenth century life and opinions given in "Piers Plowman." "Few other works," she says in her Introduction, "give a better insight into English life and thought in the fourteenth century than 'Piers Plowman'."

Alternating Currents. Parts I and II. By C. G. LAMB, M.A. Demy 8vo. Part I, 5s 6d net. Part II, 7s 6d net.

Parts I and II are the first of a short series of notes intended primarily to assist the student in writing up his lectures. They are of the nature of a full explanatory syllabus of the course of lectures given to third-year students in the engineering laboratory.

Arithmetic, Part II. Exercises only. By C. GODFREY, M.V.O., M.A., and E. A. PRICE, B.A. Crown 8vo. Without answers. 2s.

This part has been issued separately in response to a demand for its publication in this form.

Principles of Geometry. Vol I, Foundations. By H. F. BAKER, Sc.D., F.R.S., *Lowndean Professor of Astronomy and Geometry*. Demy 8vo. 12s net.

"The volume is a most interesting and pertinent one, and the student will learn more from it in a month than from many of the text-books crammed with intricate details of what—we have often wondered why—is called 'elementary geometry.'"—*The English Mechanic*.

Elementary Analysis. By C. M. JESSOP, M.A. Crown 8vo. 6s 6d.

The first part of this book deals with the elements of plane co-ordinate geometry, and the ideas and methods derived therefrom are made use of in the second part to develop the theory of the calculus. This latter part contains an explanation of first principles, together with the differentiation and integration of the simpler functions and simple applications.

Stories of Exploration and Discovery. By A. B. ARCHER, M.A. With 21 maps and illustrations. 3s net.

"This supplies a most interesting, unified account of the progress of exploration and discovery from the very earliest times. . . . No pupil, who has read through the account, will come away from his task feeling wearied; he will indeed be led to explore himself among the books mentioned in the excellent 'reference and study' list appended to the book."—*The Scottish Geographical Magazine*.

Cambridge Geographical Text-Book. Junior.

By A. R. CHART-LEIGH, M.Sc. With 65 illustrations and 5 diagrams. Crown 8vo. 5s.

"Amongst the multitude of geography text-books which find their way to the office of *Education* to-day, we know of few that merit commendation more than Mr Chart-Leigh's work. Clearly written, containing a vast amount of information, simply paraphrased, and beautifully illustrated, it represents the high-water mark of such work."—*Education*.

Cambridge Geographical Readers. Book IV, Western Europe and the Mediterranean Region.

General Editor: G. F. BOSWORTH, F.R.G.S. Crown 8vo. With 64 illustrations. 4s 6d. This volume completes the series.

This book was written in accordance with the Board of Education's Circular (834) on the Teaching of Geography. The earlier chapters on the Principles of Geography have special reference to Europe; and the last chapter, on "The New Europe," gives a comprehensive review of the changes which the war has brought about.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

of the same gentleman as "an American who has won great fame as a golfer" is due to a similar coincidence of name.

There are other mistakes which perhaps hardly deserve to be stigmatized as "howlers," since, though they show the pupils' ignorance of particular facts, they often give evidence of intelligent reasoning, or at least of intelligent guess-work. Thus, various students who had not heard the Duke of Wellington referred to as the Iron Duke, applied the phrase, with some show of reason, to William, Duke of Normandy, Richard III, the Duke of Marlborough, and the Kaiser; and less appropriately to Cromwell, whose association with the "Ironsides" was no doubt responsible for his inclusion. Similarly, the description of Pitt as the "Pilot that weathered the storm" was evidently unfamiliar to many, and considerable ingenuity was displayed in finding historical characters to whom the phrase might apply. These included Jesus Christ, Columbus, Cromwell, Nelson, Admiral Jellicoe, and St. Peter, the last name being accounted for by the fact that the writer had recently been studying "Lycidas." The students who explained "The Cockpit of Europe" as meaning Austria and the Balkans respectively had at any rate some idea of the meaning of the phrase, though they did not know to what country it had been applied. ("Spain," which appeared in several papers in answer to this question, was apparently due to a confused association between cock-fighting and bull-fighting.) A most ingenious example of this class of mistake was the explanation of "Auld Reekie" as "a famous Scotchman round whom a tradition has been woven." This seems to be almost entirely a work of imagination, based perhaps on a slight recollection of "Old Mortality."

There is another kind of "howler" which can only be attributed to slovenly thinking. This is shown in the vagueness and inaccuracy of the information possessed by the pupil, or in the careless and unintelligent way in which it is set down. Such mistakes, though less interesting psychologically, are often humorous in their effect. Thus a number of students who had evidently a general impression that Lord Northcliffe occupied a prominent position in public life, but had not informed themselves further about his activities, described him variously as "Chancellor of the Exchequer," "Viceroy of India," "First Sea Admiral," "a favourer of the Socialist movement," and "Editor of *John Bull*." For a reference in an examination paper to a poem called "Ode on a Grecian Earl" I have perhaps partly to blame my own faulty enunciation when lecturing on Keats; though, if the student had read the poem, as she was recommended to do, instead of merely "getting up" her notes, the mistake need not have occurred. Another student, intending to quote a passage from one of Stevenson's essays, in which he says, "Books are good enough in their own way, but they are a mighty bloodless substitute for life," substituted for "bloodless" a word which is not generally heard in polite society, and which means the exact opposite. In an examination paper on Shakespeare's "Henry IV," the writer was describing the scene in which Falstaff, wishing to avoid speaking to the Lord Chief Justice, whom he has accidentally met in the street, pretends to think that the latter's servant, who has been sent to accost him, is a beggar. "What! a young knave, and begging!" exclaims the knight. "Is there not wars? Is there not employment? Doth not the king lack subjects? Do not the rebels need soldiers?"—and so on at some length. This was reproduced as, "Is there not wars? Is there not unemployment?" One cannot suppose this was intentionally humorous, as an examination is too serious an occasion for such levity; but the idea of using the unemployment "dole" as a means of livelihood is so thoroughly in keeping with Falstaff's character that one can only regret Shakespeare lived too early to make use of it.

REMINISCENCES OF AN EX-HEAD MASTER.

By "RUDE DONATUS."

IV.

OF MASTERS.

WHAT can be said, except repetition of what has already been said over and over again? This is, however, solely from the point of view of a head master. In some ways his office is a very lonely one. We may put aside his private life, family life, and so on. In his official capacity he is, and perhaps must be, a very lonely man. If he is not, danger walks on either side. Among a large number of masters he must, of course, be much nearer to some than to others. And yet, even so, complete intimacy there can hardly be with any. With his senior colleagues he consults on all weighty matters, but the ultimate decision must be his. With the younger he has to encourage enthusiasm, inculcate the feeling of comradeship, condone blunders, suggest kindly criticism. He has men of all characters and of varied gifts—all-round men, specialists, athletes, stupid men. For each there is a place: every one has his own value, and it is the head's duty to discover it and make it serve the school's ends. One guiding principle must be not how far is A. or B. of use to me as head, but how far is he valuable to a portion of the school's life? There is, however, one failing which, unless overcome, should never be overlooked, and that is, incapacity for preserving discipline. Even here a young man who seems at first a failure need not despair. It may well be that, though in his first school he learnt that he was failing and listened to counsels of retirement, yet by a complete change he carries the lessons of his failure with him and can be a success elsewhere. But it is the head's duty to counsel and to bring about a parting. Nor should it be too long delayed. If he shirks so manifest a duty, he is false to his trust and helping to spoil a young man's career. Even though there be an inner and an outer circle of masters, the wise man never allows the latter group to feel that their advice is not wanted, and that, when given, it is not considered. "Mysteries are" not seldom "revealed unto the weak."

In one respect a latter-day head master is severely handicapped as compared with the more spacious direction of old-time seminaries, when every head master did that which was right in his own eyes and ushers were as nothing. This is by the introduction of pensions for assistant masters. But pensions have the compensation of compulsory retirement at a definite age. Aforetime it was the head's unpalatable duty to ease away the ancients. Now they pass away automatically. How, then, is this a difficulty? Is it not better than that the onus should lie on one man's shoulders? Certainly it is, if the one man cannot square his shoulders, straighten his back, and harden his heart. Moreover, it was for long years nothing short of a scandal that a man who has done faithful work should be, as it were, turned out upon the streets. The head, therefore, knows that the pension scheme—inadequate as the yearly sum earned may be—is just and needful. He also knows that it does not decrease his difficulties with masters. For what is it that he needs in a large school? He must have the support of experience among those who are house masters or who are valuable for length of service and sound judgment: at the other end, he must have the young enthusiasts who are learning their work, who are closer to the age of the boys, who are keen to undertake this duty or that, and are prepared to forget that they have ever *agreed* to do something to the exclusion of anything else which came in their way—in short, young men who are malleable and joyous, full of the fire of endeavour, and ready to find time for what they may think to be the head's fads, but which they gradually discover to be of the first importance in the school life. Between those two classes there comes in the trouble. Men who have no chance of a house, or no chance until it is not worth their while to take

(Continued on page 208.)

one; men who are not suited for a house—an alarmingly large class; men who have taught and taught until the routine has entered into their souls and they are fast bound in time-tables and “copies”; men whose outlook has become dimmed and who watch the slow terms pass until they find release—and a pension. What can be done with such? They are too often clogs in the school wheels, even though they continue to fulfil adequately the daily task, even though their work in days past has been beyond price and their faithfulness in duty a crown of glory. Shall the head suggest to them voluntary retirement? Is it not to curtail their pensions? Shall he harden his heart, as head masters did in olden time, and give them notice to quit? It sounds as if he ought; and yet appeals *ad misericordiam*, the sight of wives and children, the facing dissension among his staff, and, maybe, a mighty struggle at a coming governors’ meeting—all these are thorns in the flesh and a sure prelude to sleepless nights. And the result is, in many, very many, cases, that a school suffers immeasurably from the solid phalanx of those who are of the past in effectiveness, but immovable till the pension clock strikes.

In quite another way the head finds difficulty with his masters. It need scarcely be said that one essential for success is to have a band of men united in aim and united with one another. The two are not always found together. When they are not there is waste of power and the grinding of friction. Can these be traced to any sure source? In many instances the source of all is the masters’ common room and the meals taken together. Can this be so? Is it not the best possible thing for shoulder to rub against shoulder, for grey head to sit next to stripling, for discussion to be free, untrammelled by procedure, without thought of a too straightlaced reverence for seniority? Does not the common room mean that all can meet on common ground? It sounds well theoretically. It often works out ill in practice. If boys live an artificial life for the weeks of term, so do the masters. Proximity has its worries. “I really won’t sit next to that man again during the term.” “You’ve got to keep old X. going: he can’t stand me.” “Can’t you induce Z. to shut up? He becomes insufferable with his boring stories.” And so on, and so on. The term passes and irritation quickens. It can well be that before the examination days arrive—when nerves are jumpy, and reports have to be written—when epigrams abound—some members of the common room are not on speaking terms with others, and there is a general acerbity which has effect outside the magisterial circle. It is the head’s duty to know and soothe; to come into common room in the best of spirits and dine; to try to be all things to all men, even to one who is a bit of an outsider and a philistine.

To have no common dining-room brings the danger of isolation for some, and it is more difficult for a head to come across those members of his staff who have no gifts of intercourse, but it avoids friction and jealousies. It is hard to choose. Probably a comfortable library and reading room where all can find a place, but without the daily enjoyment of communal baked meats—these fulfil all that is needful and avoid much that can be disastrous. As he looks round his staff when term begins, the head will stifle a sigh and say to himself, “Would that masters were as easy to manage as boys!”

SCIENCE AND SOCIAL PROGRESS.—The Unity History School, organized by Mr. F. S. Marvin, will be held this year at Woodbrooke, Birmingham, on July 27–August 4. Dr. Charles Singer, of the University of London, has co-operated with Mr. Marvin in the arrangement of the programme under the general title of Science and Social Progress, and the list of lecturers includes, in addition to Dr. Singer and Mr. Marvin, Prof. J. L. Myres, Dr. J. L. E. Dreyer, Prof. J. A. Platt, Prof. A. N. Whitehead, Prof. C. G. Desch, Prof. J. A. Thomson, Mr. Julian Huxley, Mr. A. E. Heath, Lord Dawson, Prof. F. G. Donnan, and Prof. A. S. Eddington. Mr. Marvin summarizes the scope of the meeting in the following words: “First the historical retrospective, then the living problem and the whole looked at from the completely human, not merely nationalist, standpoint.”

INTERNATIONAL LEAGUES IN HISTORY.

By A. J. EVANS.

THE League of Nations is now an accomplished fact and even the most pessimistic must acknowledge that it has done some useful work; the Washington Conference, too, its friendly rival, has effected much which its convener, President Harding, and his secretary, Mr. Hughes, proposed, to the astonishment of the world, at its first meeting. There is not only an agreement among the Pacific Powers, but also a mutual promise of the United States of America and the leading European Powers to carry out a policy of partial naval disarmament. These events are unparalleled in history, yet they remind us of institutions which attempted, on a smaller scale, the same beneficent work of giving peace to a distracted world—such, *e.g.* as the Amphictyonic League and similar bodies in ancient Hellas.

The greatest, and for a long time the most successful, of such attempts, was the Roman Empire; throughout its territory by land and sea there was profound peace, wars were waged only on its distant frontiers, and the Apostle Paul did not have to count among his perils those of pirates or of armies. But at last the Pax Romana broke down and the “barbarian” invasions of the fourth and following centuries brought in the “Dark Ages” of turmoil from which Karl the Great (“Charlemagne”) for a time delivered western Europe. His coronation as Roman Emperor in 800 was, as it were, the beginning of that idea which, under the name of the Holy Roman Empire, possessed the minds of men as the rule of God upon earth for many years; it could never be realized, partly because it was so closely associated with the German kingdom and partly because of the rivalry between its two heads, the German king-emperor and the Bishop of Rome. It was only after it had shown itself incapable in the middle of the thirteenth century that Dante, in his “Divine Comedy” and in his prose work “De Monarchia,” pictured it as the only form of government that could give peace to a distracted Italy and a Europe at war.

What the Holy Roman Empire might have effected was attempted by clergy striving to introduce a Pax Dei, or, failing that, a Treuga Dei, a truce which would stop the petty wars of nobles, at least during week-ends; Henry V of England is represented by Shakespeare as dreaming of a united crusade to defend Constantinople from the Turk, and Charles V of Germany (Charles I of Spain) had a large dominion which might have kept the peace but for his long quarrel with France and the troubles which arose out of the Reformation. But then came the sixteenth and seventeenth century wars of religion and the eighteenth century wars of dynasties, and Grotius of Holland and his followers planning an international law, and the Mystics and their disciples, the Society of Friends (“Quakers”), with their objection to the use of force, were the only advocates of peace. Napoleon once said he had had a scheme for a league of peace, of which we may presume he would have been the president, but after his time the only followers of the Quakers were American and other peace societies. When in 1851 Queen Victoria’s consort, Prince Albert, planned the great exhibition which was to inaugurate an era of peaceful commerce, it proved instead to be an epitaph, not a prophecy, and when, in 1901, the Crystal Palace celebrated its jubilee, it was with a naval and military exhibition. And so Europe descended into the inferno of 1914–18, and it was not until she had so fallen that the greater minds of our own time have worked for a rise toward salvation; it is, perhaps, but the dawn, but the hopes of the world are with the League and the Conferences.

THE League of Nations Union have received from the American School of Citizenship League a list of American schools which desire to arrange for their pupils correspondence with boys and girls in similar schools here. Teachers interested should write to the Union, 15 Grosvenor Crescent, S.W. 1.

The Individual and the Environment.

SOME ASPECTS OF THE THEORY
OF EDUCATION AS ADJUSTMENT.

By J. E. ADAMSON, M.A., D.Lit.,
Director of Education, Transvaal Province.

8vo. 14s.

In this book the author has tried to establish the view that in the conception of the adjustment of individual and environment we have a fundamental principle, about which a rational theory of education can be developed.

MASON'S SCRIPTURE MANUALS.

IN these Manuals each chapter and verse of the Bible has been taken in order, and Questions similar to those set in the Oxford and Cambridge Local, the Pupil Teachers', and Diocesan Examinations carefully selected in every chapter, together with numerous Explanatory Notes collated from various commentaries. After each question, the answer is either given in full, or the number of the verse or verses in which it occurs.

The following Manuals are already published :—

	s.	d.
The Four Gospels	each	0 9
The Acts of the Apostles	1	6
Genesis and Exodus	1	6
Joshua and Judges	1	0
Samuel I.	0	9
Samuel II.	0	9
Kings I.	0	9
Kings II.	0	9
Jeremiah	0	9
Ezra, Nehemiah, Esther, and Haggai	0	9
Corinthians II.	0	9
The Church Catechism	0	9
Morning and Evening Services and Litany	1	6

A Catechism on the Ten Commandments, with one hundred Practical Questions specially adapted for Children of all Religious Denominations in Elementary Schools. Price 4d.

Euclid (Book I.) made easy for Young Beginners. Price 1s.

SIR JOHN McCCLURE—AN APPRECIATION

SIR JOHN McCCLURE died at Mill Hill in the afternoon of February 18, after a week's illness. Even now it seems almost incredible: and this is not merely another way of saying that we cannot bear to believe it; it is because he was so vivid, so full of radiating energy, that it was difficult to think of him as of any particular age, and his death at the age of sixty-two affects us as might the death of one cut off suddenly in his prime. We feel that Death has stolen a march upon us: he has died before his time. Yet it is not an inconsolable thought, for it means this, at any rate, that our memory of him is and always will be not only the memory of a great and splendid character, but also the memory of that character in the full vigour of its active encouraging influence upon all who came within its reach.

Perhaps of all his qualities—if indeed it can be called a single quality and not rather the fundamental condition of the exercise of all of them—this gift of encouragement was the greatest. Others have been famous in counsel, skilful in many arts, kind as well as prudent in their dealings; of few can it have been more truly said than of McClure that nobody was ever in his company without being in the fullest sense of the words the happier for it. He was an extraordinarily wise counsellor; quicker than any man to see into the heart of a problem, never allowing his judgment to be distracted from the pursuit of the exact truth, never flinching from the sight of it, content with nothing less—and allowing no one to be content with less—than the completest solution that the case allowed; and so clear was his devotion to truth, and so penetrating his criticism that even his most disconcerting verdicts were seldom challenged, never resented.

He was an almost demoralizing person to have on a committee, because he paid such continuous attention to the business and was so shrewd in his observations that there was a temptation to wait and see what he had to say instead of trying to make up one's own mind; not that he ever attempted either to monopolize or to dominate an argument, but that somehow, when the discussion was over, what he said was pretty sure to be the last word on the subject. Most head masters have to do a good deal of public speaking, and some have become respectable orators. McClure must have been born with the gift. It may be doubted whether he ever made a speech of which the end did not come too soon for his audience, and it fell to him in the exercise of many functions to make many speeches. His serious discourses will not be easily forgotten by those who heard them; there was never any doubt about his aim; he said what he thought with a direct simplicity of language that was the natural expression of a strong and simple character served by a singularly powerful intellect. And who was ever so amusing, when he spoke to amuse? As an after dinner speaker he can hardly have been surpassed; he had to perfection the art of thinking ahead as he spoke, and yet giving the impression that he was expounding a series of unexpected and delightful discoveries, with the consequence that you never knew what he was going to say next, but when he had said it you saw that it was the only possible thing to say—if a man had the wit to think of it.

We are apt to suspect versatility as likely to be incompatible with wisdom, but McClure's versatility was not of that kind; he knew more things thoroughly than ordinary people have the time or the ability to know superficially, and all his knowledge was at the service of his neighbours. One of the most delightful examples of this was his organization and direction of the musical programmes given in 1921 and 1922 in connexion with the Annual General Meetings of the Head Masters' Association; the second of these entertainments was almost his last appearance among his colleagues, and will be among their happiest memories of him.

But when all is said, what we shall think of longest is not his intellectual vigour, not his eloquence, not even his wisdom and his wit, which are comparatively easy to describe and estimate, but that inestimable unrecordable beauty of character which shone through his ordinary intercourse and made his friendship incomparably precious. "Vereor," said Pliny on the death of his friend—and Pliny, if something of a pedant, was capable of friendship—"Vereor ne negligentius vivam." There must be not a few to whom life will be more difficult in future, deprived of such a companion.

R. F. C.

[John David McClure was born at Wigan in February, 1860. He was educated privately and at Owens College, Manchester; from 1878 till 1882 he was an assistant master at Hinckley Grammar School, taking the London B.A. degree in November, 1878. In 1882 he entered Trinity College, Cambridge, and in 1883 obtained a sizarship and also one of the Goldsmiths' Company's Exhibitions; in 1885 he graduated as a Senior Optime; but for a breakdown in health he would undoubtedly have been a Wrangler. He was a lecturer—chiefly on astronomy—for the Cambridge University Extension Syndicate from 1885 till 1893, and Professor of Astronomy at Queen's College, London, from 1888 till 1894. In 1890 he was called to the Bar as a member of the Inner Temple; in 1891 he was offered and accepted the head mastership of Mill Hill, then a school of about sixty boys; in 1913 he received the honour of knighthood—an honour never bestowed upon any other schoolmaster during his exercise of his profession. This is but a formal summary of his professional career; besides his official duties he did an extraordinary amount of public work, particularly in connexion with the Head Masters' Conference and Association and the Congregational Union; he was for nine years joint Honorary Secretary of the Head Masters' Association, and was President in 1914, and was Chairman of the Congregational Union in 1919-20.]

PERSONAL PARAGRAPHS.

By the death of Professor J. A. Green of Sheffield University, a well-known figure has been removed from University and other educational circles. Born in 1867, he received his early education at an elementary school in Sheffield. Passing through Firth College, he proceeded to Borough Road Training College. Later he became tutor at Borough Road, and obtained further experience on the staff of a Pupil Teachers' School in London. He was appointed Lecturer in Education at University College, Bangor, in 1894, and promoted Professor in 1899. Seven years later he accepted the chair of Education at Sheffield. His reputation as an educationist and administrator at Bangor was more than maintained in his new sphere of work, where his unusually wide experience gave him much influence in administration in connexion with the University. Few men were more versatile in their occupations than Professor Green. He represented the University on many public boards and he took a prominent part in the work of the Local Education Authority. Members of the British Association will remember with appreciation his term of office as Recorder of the Education Section. Among his published works are: "Educational Ideas of Pestalozzi," "Pestalozzi, His Life and Work," and "An Introduction to Psychology," and he acted as editor of the *Journal of Experimental Pedagogy*. Professor Green's activities extended into all manner of out-of-the-way directions. It is not usual for a university professor to take an active part in such diverse matters as are presented by the Froebel Union and the various

A WISE ECONOMY

A wise economy is a duty laid upon every one at the present time.

Happily, this necessity has arisen when the prices of paper and materials are at a lower point than they have reached since 1916; consequently at the present time

STOCKS CAN NOW BE REPLENISHED AT MOST FAVOURABLE PRICES.

The E.S.A. have just issued a revised price list which shows very large reductions in the prices of all paper goods, and in addition to their well-known, high-grade standard makes, they are offering "Good enough" Exercise Books, Foolscap Paper, &c., at remarkably low prices; but although the prices are exceptional, all writing materials are guaranteed as efficient.

EXERCISE BOOKS.

Superior Paper. Exceptional Value.

Price 28/- per gross.

Containing 80 pages; bound in limp watered silk cover. The books are supplied in different colours and in various rulings.

EXERCISE BOOKS.

Bound in strong paper covers.

80 pages, 23/- per gross.

40 pages, 13/- per gross.

We hold a huge stock of Exercise Books in all quantities and prices, ready for immediate delivery.

PAPER.

Foolscap Paper from 3/3.

Examination Paper, 2/9.

Sermon Paper, 1/7.

All per ream 480 sheets.

CATALOGUES.

STATIONERY CATALOGUE,

giving particulars of Exercise Books, Drawing Books, Examination Paper, and every School Requisite will be sent free on application.

At lowest current prices.

HOLBORN RING BOOK.

A stiff cloth cover with nickel-plated rings affixed to cover that open and close quite easily by pulling one ring apart to open, and snapping it together to close.

Covers only from 1/9 each.

Guides, per set of 5, 6d.

Paper to fit, 2/4 ream.

FILING CASES WITH CORDS.

A cloth case with two flanges inside eyeletted, with two holes through which cords are passed to hold several Exercise Books or loose leaf paper.

Covers only, from 1/2 each.

Guides, per set of 5, 6d.

Paper punched to fit, 2/4 ream.

FLAT FILES.

Files from 5 1/2d. each.

A strong Manilla cover with a flange inside containing two brass pins, paper with punched holes are placed on the pins and kept in place by a metal fastener.

FOLDING DESK No. 181, 18/6 each.

Do. Fitted with folding Bookshelf underneath, 23/6 each.

GEOMETRY BOXES.

Exceptional Value. Strong Metal Box of Instruments, containing Brass Pencil Compass and Compass Lead; Metal Set Square (45°), Metal Set Square (60°); Boxwood Rule, 1/10 in., 1 in., cm., and mm., Protractor marking on the reverse; Lead Pencil, H, and Piece of Rubber.

1/4 per box; 6 dozen boxes, 1/3 per box.

A TWO PENNY PENCIL for a PENNY.

The "Holborn" Round Red Polished Real Cedar Pencil. 12/- gross.

H, HB, and B degrees.

PENS.

The ESA's series of Pen Nibs comprises a large selection of patterns all specially designed for School use.

From 1/9 gross. Samples post free.

associations of handwork trainers. One of his most important offices was membership of the Teachers' Registration Council, where his knowledge of continental practice in the training of teachers enabled him to render notable service on the Training Committee. In connexion with the W.E.A. he did some of his best work, and had much to do with the great success of that movement in Sheffield.

* * *

OXFORD has suffered grievous loss by the death of Dr. Henry Boyd, Principal of Hertford College, at the age of ninety-one. Dr. Boyd was the oldest College "head" at the University, and his life embodies a long chapter of Oxford history. When Hertford College was refounded in 1875, he was one of the first Fellows, and two years later he succeeded Dr. Michell as Principal. Backed by the Barings he added materially to the first meagre buildings, and Hertford, as it is now, is largely his creation. As a fatherly autocrat and an instinctive judge of men, Boyd ruled his College without friction, and acted as Vice-Chancellor for four years without dispute. He always kept in close contact with the undergraduates, and his unflinching example of kindness and devotion deeply influenced College life. Boyd "discovered" Dean Inge whom he appointed as a brilliant scholar to a tutorial Fellowship at Hertford. Other notable Collegers under Boyd were Lord Hugh Cecil, John Campbell, F.R.S., and Dr. Williams, now Bishop of Carlisle.

* * *

"OLD BLUES" of many school generations will deplore the death of the Rev. Richard Lee, late Head Master of Christ's Hospital, London, who had been living in retirement since 1902, when the ancient Foundation was transferred to Horsham. A son of the late Rev. Richard Lee, he was himself a Bluecoat boy under the Spartan rule of Dr. G. A. Jacob, and went with a School Scholarship to Jesus College, Cambridge, where he obtained a Foundation and a Rustat Scholarship. Bracketed first in Class II of the Classical Tripos, he took his B.A. in 1869, and accepted appointment as second master at Weymouth Collegiate School, where he quickly proved to be a born teacher and disciplinarian. In 1870 however Lee returned to his old school as first assistant in the counting house, and obtained experience in a side of school administration with which schoolmasters are seldom familiar, and which afterwards counted for so much in his career. He was removed from the counting house to a lower mastership in 1871, and three years later he was promoted first assistant Upper Grammar Master. Here his firm hand and sound methods quickly influenced school life. In 1876 the Rev. G. C. Bell, the head master, was elected to the Mastership of Marlborough, and the Governors occasioned surprise by appointing Lee to the vacancy, and thus breaking the tradition that no assistant, however good his record, could be directly promoted Head Master. The choice proved sound for in the difficult circumstances in which the school was placed, a man of strong personality, determination, and organizing power was needed, and Lee fulfilled these requirements. His tenure of office bristled with difficulties, not only those inherent in a big school in the heart of the City, but also those involved in the reorganization of the institution under the new scheme of the Charity Commissioners. Lee proved fully competent to deal with successive problems as they arose, and under his rule the school made notable progress. All "Old Blues" of his time will remember how successfully and with what a masterly hand he organized the great evening preparation school; his clear and methodical, if not very expansive, teaching; and his quaint and pithy sayings, succinct, compressed, and with a touch of sarcasm. He was above all a wise and cautious man; but the few who got to know him more intimately felt the sterling warmth of a kindly heart.

CORRESPONDENCE.

FIRST THOUGHTS ON THE GEDDES REPORT.

To the Editors of The Journal of Education and School World.

SIRS.—Mr. J. L. Holland's "First Thoughts" (published in the March issue of the Journal) will be shared generally by his colleagues in the educational service. These have suffered long enough from the tradition of penury associated with the provision of elementary education; they have seen visions of developments unfettered by financial considerations, and they can hardly be expected to agree with the proposals of the Committee on National Expenditure. The Committee, I venture to suggest, performed a difficult task with remarkable discernment and efficiency, and if, as may well be, the axe is a clumsy weapon with which to prune our educational policies, they certainly need the cold steel of common sense. As, however, the chief proposals regarding elementary education, the subject of Mr. Holland's "First Thoughts," have been rejected by the Government, it is not necessary to discuss them.

I differ from Mr. Holland, and agree with the Committee, regarding the "vicious system" of grants in aid of approved expenditure. He sufficiently condemns the system by reminding us that "the control of the Board of Education extends to almost every detail of expenditure to-day; the Local Authorities are hardly more than agents and ministers of the Central Authority." This must become increasingly so while of every pound expended by the Local Education Authority, the Government has to find a definite proportion. And as expenditure depends upon policy, the policy of the Local Education Authorities will be determined for them. In this connexion, it should not be forgotten that the intention of the Act of 1902 was to diminish, not to extend, the interference of the Board of Education. "One great advantage," said Sir A. J. Balfour, when he introduced the Act, "which I foresee, from the local government point of view, is that education will now be largely decentralized, and that it will be for each authority to determine what is the species of education most needed by the children in its area to fit them for their work, which, after all, no central department could so well judge of as those whom their parents elect and who are acquainted with the circumstances in which they live."

The percentage grant system may very readily encourage Local Authorities to incur expenditure which, if left to them selves, they would not incur. Not many years ago the Ministry of Agriculture were endowed with resources that enabled them to offer substantial bribes to Local Authorities for purposes that would rarely have survived an appeal to the rates, and it may be doubted whether the orderly and progressive solution of the salary problem would have been equally progressive if the Government had not been committed to meet three-fifths of salary expenditure. It was urgently necessary for the remuneration of teachers to be permanently augmented; it was not, however, urgently necessary to augment the remuneration to such an extent that the cost of salaries per unit of average attendance should jump from £3 os. 10d. in 1913-14 to £8 8s. in 1922-23, and thereby arrest indefinitely other educational reforms and developments. But perhaps as the Government Actuary was not consulted on the question of teachers' pensions, the Burnham Committee adopted the Standard Scales without trustworthy estimates of cost.

In nearly all administrative areas, as in Derbyshire, there are many small schools, some of them very small. I agree with Mr. Holland as to their communal importance, but the question arising is this. Is the service that such schools are capable of rendering to the community commensurate with the expenditure involved in maintaining them? The "benevolent, intelligent, and scientific educationists in Utopia," have now made the relatively simple process of teaching young children the rudiments of knowledge so costly, that expenditure in other directions must be limited, and essential reforms retarded. The limitation and the retardation are to be deplored, but the responsibility rests, not with the Committee on National Expenditure, but with the Board of Education and the Local

USE

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE) (British owned)

EARLY in the EASTER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the
ROYAL SANITARY INSTITUTE,
and is strongly recommended by Medical and other expert authorities.
It costs little and is easily applied. Not sticky—the ordinary daily dry sweeping alone required—scrubbing being optional.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for
2 to 12 months, according to the traffic, not only during each sweep-
ing (without sprinkling of any kind), but also throughout all the inter-
vening periods — which is even of greater hygienic importance.

"FLORIGENE" has been continuously used for many years on the floors of The Royal Naval Colleges and other important Government
Buildings ; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

Authorities. They, in their wisdom, surrendered their functions to the Burnham Committee, and that Committee has determined the destination of the major proportion of the money available. It has been prodigal in spending pounds and has left the Board of Education and the Authorities the troublesome task of saving the pence. It may have solved one difficulty, but it has created many others.—I am, Sirs, Yours &c.,

A PUBLIC SERVANT.

CONFERENCE OF EDUCATIONAL ASSOCIATIONS.

To the Editors of The Journal of Education and School World.

SIRS,—Having seen the letter under this heading in the Supplement of your February issue, I wish to reply to some of "B's" remarks on the Conference held during the last days of 1921 and the first week of this year.

The Conferences of Educational Associations arose from a desire (a) to save the multiplication of meetings held simultaneously in various parts of London during the Christmas vacation, and (b) to bring members who belong to various sectional and subject Societies into touch with one another so that they may exchange views on principles and ideas common to them all, and also may learn something of what teachers of subjects other than their own are doing.

The idea underlying these Conferences is to form a British Association of Education, not of the Teaching Profession, if those words are confined to actual teachers. The British Association of Science is not confined to experts only in any science.

These Conferences of Educational Associations are managed by a Committee of representatives of all the affiliated Societies. The Committee settles date, place, joint meetings, social gatherings, exhibitions, and so on, but each Association arranges the subjects and speakers for its own meetings. It may, therefore, be assumed that the subjects and speakers chosen are those particularly desired by the members.

In the view of the Joint Committee "Teachers" is a very comprehensive word, including those who are Teaching Privately, in Nursery Schools, or Lecturing in the Universities, with all the various grades between them. "B" would find that more than three-quarters of the appointed speakers and chairmen at the last Conference are included within this category, instead of his one-fifth. "B" does not know, for example, that there were three Associations of Teachers holding private meetings at the Conference, and not publishing the names of their speakers and chairmen, all of whom were teachers. Two thousand five hundred members of the affiliated Associations attended the meetings, and nearly one thousand non-members were sufficiently interested in educational questions to wish to hear them set forth and discussed.

Is it not counted against Teachers that they keep too much to their own grooves, and is it not desirable that they should not only meet each other, but also mix with those who see educational problems from a different angle? These Conferences were initiated by two or three people who were not teachers, but who belonged to one of the Associations. They saw the benefit of bringing all kinds of teachers and those actively engaged in furthering education into close contact with one another for the exchange of ideas.

The encomiums bestowed on the Conferences by those attending them are sufficient guarantee that they supply a great need, and probably if these meetings were confined to school teachers speaking to school teachers there would not be so much widening of outlook, nor so much inspiration as these Educational Conferences are said to afford to all the members.—I am, Sirs,

Yours faithfully,

HENRIETTA BUSK,

Honorary Organizing Secretary and Treasurer.

NOTE.—This letter was held over from the March issue.—THE EDITORS.

To the Editors of The Journal of Education and School World.

DEAR SIRs,—I am obliged to you for permitting me to see Miss Busk's letter. Her estimate of the number of teachers amongst the chairmen and speakers would be more convincing if she had gone into details. I stated definitely that amongst these were "one head master of a secondary school, three head

mistresses, one assistant master, one assistant mistress, and some five or six teachers in elementary schools." If this statement was incorrect, why does not Miss Busk prove its inaccuracy by giving the correct figures?

It is true that I took no note of university professors and lecturers. This was because university education is not discussed at the Conference, and therefore university teachers must rank at the meetings rather as amateurs than professionals. Of course it is a great pity that university teaching is considered to be above criticizing; discussions on such crimes against youth as the university schools of modern languages and English might be very useful. But I can hardly imagine such practical subjects being discussed at the Conference.

On one point I entirely agree with Miss Busk; it is a good thing for teachers to hear addresses from those outside their profession, and this is what was in my mind when I wrote, "Such a series of meetings may have its value." Only I should like to see the part played by laymen greatly reduced, and that played by teachers greatly increased.—Yours,

B.

THE TEACHING OF DYNAMICS.

To the Editors of The Journal of Education and School World.

SIRS,—In your account of the meetings of the Science Masters' Association, you refer to the discussion on the teaching of Dynamics, and note that "the usual treatment is not sufficiently experimental, and that there is a striving after logical sequence which is quite unnecessary"; a further reference is made to a scheme of work in which these "faults" are avoided.

As I opened the discussion, and insisted upon an attempt at logical clearness in teaching the subject, may I be allowed to make a few comments on the above misleading statement? In the first place, it is probable that the complaint of insufficient experimental work does not apply to many schools at the present time. With regard to the second point—it will surprise many to hear that the usual treatment suffers from the fault of striving after logical sequence! An examination of the text-books will soon dispel the notion. This treatment is supposed to be based upon Newton's "Principia," and the chief criticism of it is that, on account of slight faults in that great work, and a perverse interpretation of what is accomplished in it, a quite inordinate amount of time and labour is expended on the mere rudiments of the subject.

In the first place, Newton did not define "mass" clearly, and a knowledge of the mass of a body is required in his subsequent statement of the mode of measuring force. Next, the substance of the first and second laws of motion has already been given in the preceding definitions of force and of the way in which it is to be measured; these laws are therefore superfluous.

The unsatisfactory people who "strive after logical sequence" merely suggest that the well-known facts just mentioned should be recognized. They contend that the meaning of mass should be explained, and that the method of measuring it, suggested by its meaning, should be defined. This is quite a simple matter, admitting of experimental illustration, and requiring comparatively little time. The manner in which force is to be measured is deduced, and is the same as that given in the Second Law of Motion (or the equivalent definitions which precede it).

In the usual treatment, "mass" is first stated to be "the quantity of matter in a body," although the futility of this expression is obvious when bodies of different composition are considered. A little later, the laws of motion are stated, and usually followed by experiments to "prove the second law"; that is, Newton's statement of the mode of measuring force is "proved" by experiments requiring an independent method of measurement. Further, although the numerical values of the masses are required, it has not been explained how these are to be obtained; indeed, other experiments are commonly given for the purpose of showing how mass may be determined as a consequence of this second law.

This exposition certainly appears to be innocent of any striving after logical sequence, but why it should therefore be regarded as specially suitable for boys—or any one else—has

(Continued on page 216.)

THE DALTON LABORATORY PLAN

By EVELYN DEWEY.

Author of 'Schools of To-morrow'

With a description of the application of the method by Miss Rosa Bassett of the Streatham Secondary School for Girls. Diagrams, 192 pages. Crown 8vo.

At all Booksellers, or direct from the Publishers
5/- net. post free.

J. M. DENT & SONS LTD.,
BEDFORD STREET, W.C. 2.

SUMMER SCHOOL OF SPANISH.

Liverpool, July 27th to August 12th.

Santander, August 17th to September 13th.

Reduced Fees for Liverpool Course for those enrolling during May, and for Santander Course for those enrolling for Liverpool also. Full prospectuses for each Course issued on April 24th. Information may be had in advance now by those needing it.

Apply: E. ALLISON PEERS, The University, Liverpool.

All Persons interested in Phonetics are recommended to join the INTERNATIONAL PHONETIC ASSOCIATION.

Subscription, 8s. per annum. Entrance fee, 4s.

Members receive free of charge *Le Maître Phonétique*, the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. JONES, University College, London, W.C. 1).

New Members receive in return for the Entrance fee: *The Principles of the I.P.A., What is Phonetics?* by H. E. Palmer, and *La Phonétique appliquée à l'Enseignement de la Lecture*, by P. Passy.—List of other publications and prices and back numbers of *Le Maître Phonétique* (from 1889) on application.

Economy with Efficiency

We have elaborated a scheme for reducing expenditure on School text-books, whilst maintaining thorough efficiency.

Our Organization is concentrating on this special purpose.

May we send full particulars?

Expressions of gratitude for prompt and efficient service have been received from the leading Schools throughout the country.

FOYLE'S EDUCATIONAL, Ltd.,

Booksellers to Schools,

Barham House, Handel Street, London, W.C. 1.

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W. 1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

A. & C. BLACK'S FIRST (REFORM) FRENCH COURSE

Edited by

F. B. KIRKMAN, B.A. Oxon.

PETIT COURS PRÉPARATOIRE.

By L. H. ALLISON, Organizing Mistress in Modern Languages to the West Riding Education Committee. A two-term course in phonetic transcript leading up to the *Première Année*. May be used independently. Containing Frontispiece in colours, several black-and-white illustrations and 65 drawings in the text. Price 2s. 6d.

Chief features: (1) The systematic and thorough training in the production of French sounds; (2) Vocabulary built up on the sounds as taught; (3) Intonation Exercises; (4) All the lessons have been practically tested in various classrooms during the last four to five years; LESSON NOTES (supplied gratis) provide all the information necessary for the teacher.

An entirely new edition of *La Première Année*.

LA PREMIÈRE ANNÉE DE FRANÇAIS.

By F. B. KIRKMAN, B.A. A Day passed by an English Boy in Paris. Sixty-five illustrations, of which four are in colour. Tenth edition. Price 4s. 6d.

Chief improvements in this edition: (1) New *Leçons préparatoires*, giving systematic instruction in pronunciation, both with and without use of phonetic script; (2) Text of *Un Petit Anglais à Paris* shortened, and certain chapters rewritten; (3) Exercises rewritten, brought up to date, and reset in larger type; one Grammatical point each exercise; Systematic revision of the Grammar Tables simplified; verb list added; (5) Important new pronunciation section for periodic practice throughout the year; (6) Only one wall picture required: the *Famille Pascal*; (7) SUMMARY OF METHOD at the end of the book, as well as separately published detailed FRENCH LESSON NOTES on each starred lesson; (8) Lesson Notes so arranged that a teacher can take up the book at any point without difficulty.

TRANSCRIPTION PHONÉTIQUE

LA PREMIÈRE ANNÉE DE FRANÇAIS.

LEÇONS PRÉPARATOIRES.

Transcribed by Prof. D. L. SAVORY, M.A. Illustrated. Price 1s. 6d.

LESSON NOTES

To accompany the above two editions of *LA PREMIÈRE ANNÉE*.

Gives full particulars as to how to make the best use of the book. Price 1s.

SOIRÉES CHEZ LES PASCAL.

By F. B. KIRKMAN, B.A. A First Reading Book. Evenings with the Fairies. Five Coloured Plates. Second Edition, completely revised. Price 1s. 4d.

FIRST FRENCH SONG BOOK.

By R. B. MORGAN, B.Litt. Forty-four Songs, of which fifteen are in Phonetic Script. Airs and Tonic Sol-fa. Third Edition. Price 1s. 4d.

COLOURED WALL PICTURE.

To accompany *La Première Année de Français*. *La Famille Pascal à Table*. Drawn from French Models and Photographs. Measurement: 45 by 35 in. Price, on linen, with rollers, varnished, 15s. net; unmounted, 5s. net. Write for post card (reproduction in colour facsimile).

Published by **A. & C. BLACK, Ltd.,**

4, 5, and 6 Soho Square, London, W. 1.

never been made quite clear. Perseverance in the use of these methods is not really due to their superiority for purposes of instruction. It is due to a conservatism which resents any criticism of time-honoured methods, especially when the introduction of much ingenious experimental illustration has tended to suggest that these methods are rational.

Other methods, indicated by modern criticism and knowledge, have not usually been tried.—Yours, &c.,
Trowbridge.

T. J. GARDNER.

To the Editors of the Journal of Education and School World.

SIRS,—May I beg leave to clear up a misunderstanding which Mr. T. J. Gardner's letter reveals? My report of the discussion on the Teaching of Dynamics which took place during the recent meetings of the Science Masters' Association was necessarily restricted in length, and I could do no more than express my own opinion on the outcome of the debate.

Mr. Gardner, of course, is quite right when he says that Newton gave no clear definition of mass. It is equally true that many, but not all writers of elementary text-books find themselves in difficulties through trying to follow Newton's presentment. But whatever course is pursued, it is a mistake to attempt too early to give young pupils a grasp of the whole sequence of ideas in a difficult argument. While listening to Mr. Gardner's address, I gathered that he laid stress, in his teaching, on philosophical matters, which in my opinion is of little value as compared with imparting a working knowledge of the subject. One wonders how Newton himself viewed this matter. It is incredible that, if he was *striving* after logic, he would not have seen his own failing. Surely it is more likely that he felt intuitively that his premises were sufficiently accurate to allow him to pass on to the development of his argument.

Boys, young boys, want 'to get on with it.' Reasoning, when overdone, is apt to impede them; and few of them can appreciate the pleasure which grown-ups find in fitting together the pieces of a complicated puzzle such as is presented in the fundamental ideas of dynamics. That joy may well be left to be discovered later. So many teachers seem to wish to teach every branch of science as if it were a book of Euclid. Would Mr. Gardner refuse to let a boy use a thermometer until the mysteries of expansion were fully grasped? Or does he go further still into Kelvin's absolute scale of temperature! Does he think, as some do, that it is necessary to define the second as well as the gram before allowing boys to deal with the unit of force? Of course not. The illustrations are given merely to show that there are natural limits to the insistence on logical sequence in these matters.

In short, it is not logic to which objection was raised, but unnecessary *striving* after it, where beginners are concerned.

THE WRITER OF THE REPORT.

MENTAL ABILITY TESTS.

To the Editors of The Journal of Education and School World.

SIRS,—I have read with interest Miss Hughes' account, in the January number of the "Journal," of the Terman's Mental Ability Test she applied in her school and the deductions made from it.

We have just completed here the second half of the Otis Group Intelligence Scale (devised by Arthur S. Otis, published by World Book Company, Yonkers-on-Hudson, New York). In September we gave Test A to our two Lower Fifth and our two Upper Fourth forms (average age fourteen years five months, and twelve years ten months). Last week we gave the same forms Test B. Eighty-eight girls were tested.

The results were compared with the September results and with the Christmas Examinations and comparisons made between the increase in the Index of Brightness made since September by—

- (a) Girls who had come up the school;
- (b) Girls who had entered in September from other proprietary schools;
- (c) Girls who had entered in September direct from the Government elementary schools;

our object being to find out how far the girls were responding to the more stimulating individual teaching given in a secondary school of this kind than is possible in the formal work required of the large classes in the Government elementary schools.

The Lower Fifth Form, where twenty-four out of twenty-seven girls had come up the school, had a higher average Index of Brightness in September than had the Lower Fifth, where fourteen out of the twenty-three tested were new girls, ten of whom had entered from the elementary schools, but in February their average Index of Brightness had gone up twenty points, exceeding that of the Lower Fifth (1) by one point. Their response, therefore, had been good during the four months of teaching.

Of the twelve girls who came first, nine were among the first twelve at the Christmas Examinations—one, low in examinations thereby revealed herself as idle as she was brilliant, and two had a rank in the Index of Brightness not accounted for by our knowledge of them or by their examination results.

In the Fourth Forms' Test the form average went up fourteen points in the half year, and the children were noticeably more familiar with what they were to do and ready for it. Thirty-eight children were tested, and of the fifteen first, nine were also among the first fifteen by examination, and their Index of Brightness corresponded very fairly with the judgment of their teachers.

It is proposed in future years to examine all new girls in September and February, and also to examine as a Form the Upper Fourth Forms as a guide in placing the former and in promoting the latter into the Upper School course designed for Matriculation.—Faithfully yours,

H. WALSH, M.A. (Dub.).

The Bishop Strachan School, Toronto.

Principal.

MATRICULATION ENGLISH PAPERS—UNIVERSITY OF LONDON

To the Editors of The Journal of Education and School World.

DEAR SIRS,—It is admittedly difficult to set a "general" paper on a subject so extensive as English, but surely the Matriculation Examiners of the University of London are doing an ill-service in devising, year after year, questions of a reactionary kind, which are a direct incentive to cram. For many years they have shown a curious affection, very hampering to schools, for the literature of the eighteenth century. If we are to believe Sir Arthur Quiller-Couch, it is difficult to arouse any interest in this period even among undergraduates; much less, then, is it likely to be studied by boys and girls of sixteen. Even on the hypothesis that the examiners have good grounds for their preference, charity would suggest that they were nodding when they asked for a summary of "Tom Jones." But other of the selections are only a little less unfortunate. "Rasselas" and "Under the Greenwood Tree," though on very different grounds, are hardly likely to have found a place in any scheme of study for matriculants. "Evelina" would have difficulty in making good a claim as against other classics; while "Dr. Faustus" is more appropriately to be found in a University than in a school course. To answer such questions, it would be necessary to revert to the old bad days of text-books with lists of authors and their works and ready-made summaries of the latter.

Again, it is doubtful whether the pre-occupation of the examiners with "style" is in the interests of sound teaching. An intelligent boy or girl would doubtless be conscious of differences of style between the various authors read and, to a very limited extent, could express a sense thereof; but it is hardly probable that such tentative comment as could be offered would satisfy the examiners. Here, again, is the incentive to stock with ready-made answers young minds which could be better employed than in precocious criticism of their betters.

It is not sufficient to argue that teachers should rise superior to the temptation to cater for examination requirements. When the subsequent career of a boy or girl depends on passing an examination, the teacher is not without some justification, who, knowing the better way, regretfully sets himself to follow the worse.—Yours truly,

Chester.

BEATRICE CLAY.

EDUCATIONAL GYMNASTIC PRACTICE

EN-TOUT-CAS:

By courtesy of the Chelsea College of Physical Education, London, S.W.3.

By means of a Cheap-Corrugated-Iron-Roofed-Over-open-at-the-side structure, connected by cover to main building, the above Frame can be used in all weathers, with the unusual advantage of frequent practice in the fresh air.

The structure is fitted with cheap Wood Revolving Shutters, like shop fronts, and closed the weather side during class practice to exclude rain or heavy wind, leaving remaining sides open for the circulation of fresh air.

WHEN WINTER COMES

Each item of apparatus is easily dis-assembled and fixed in existing Room or Hall.

WHEN THE NEW GYMNASIUM IS BUILT

the apparatus may form part of the outfit, the only extra cost would be the attendance of an expert erector to set apparatus safely in position.

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

IV.

MODERN LANGUAGES.

BY WALTER RIPMAN.

IN recent times the scope of the modern language teacher's work has been greatly extended. In my school days learning French was largely a matter of translation from and into the foreign language. When I had decided to compete for what was, I believe, the first scholarship in modern languages offered by any English University (certainly the first one offered at Cambridge), I was recommended to read certain books, but to all intents and purposes I was left to my own devices. That was thirty-five years ago, when "advanced work" in modern studies was not part of the school curriculum.

Nowadays the outlook has changed. Skill in translation is not the only aim; some ability to use the spoken language, some acquaintance with the life and ways of the foreign country, and a more ambitious study of the literature are required. The modern language teacher now feels that he needs various auxiliaries which in the old days would have been regarded as luxuries.

If we regard the books used in class as the normal instruments, we may consider as auxiliaries all other books that assist in making the study of a foreign language profitable. One of our aims must be to encourage private reading. The teacher sometimes does this by lending books from his private library; but it is better if the school provides an incentive by adding attractive books to the Form libraries. These mostly contain English fiction; it would be well to include good fiction, books of adventure, travel, etc., in foreign languages. In some schools the pupils have formed a magazine club, with a small terminal subscription, for the supply of magazines,

such as "Lectures pour tous" or "Mon Journal." These magazines when bound can be added to the library. Mr. Purkiss has done a good service by his French magazine "La Petite Revue"; and more recently the enterprising firm of Evans Brothers has launched a French weekly, "La France," with every prospect of success. It contains interesting extracts from French newspapers, original articles, anecdotes, competitions, etc., and is well illustrated; and the price of a single number is only 2d.

Where higher work is done, a different type of book is required. Few schools as yet are adequately equipped with books of reference for the study of language, literature, and history. There has been a very gratifying increase in the number of schools taking the "modern studies course," since the year when English came to be eligible as a modern language; but it coincides with a time when expenditure on education is being reduced most painfully. It is justly felt that the axe must not cut down salaries; but there is a real danger that the money available for "materials" will be withheld to a degree that will seriously impair efficiency. It will not be possible to carry on post-Matriculation work in modern studies in a sound way unless our students have ready access to books which they cannot be expected to buy for themselves.

In the early stages of instruction the teacher does not require much in the way of auxiliaries. In connexion with the phonetic work he needs a chart of the sounds and a little mirror for each pupil. The sound chart saves much time; a diagram of the organs of speech may also be used, but blackboard sketches serve the purpose almost equally well. The liprounding that is essential for the production of certain French and German vowels can be taught without mirrors, perhaps; but it is certainly taught much more quickly and effectively with their aid.

The singing of songs in the foreign language adds interest and affords a welcome change. Several little French song books have been issued. It is best to have one which also provides a phonetic transcription: unless the sounds are quite correct, singing may simply lead to the confirming of bad habits.

The use of talking machines has often been advocated; several "methods" have been issued based on it. It is disappointing that the companies interested in the manufacture and sale of records have paid so little attention to the needs of schools. Their efforts in this direction have been fitful and often ill-advised. Thus the Gramophone Company, while developing the educational side of its business in musical records, has never had any settled policy with regard to records of the spoken language. Fifteen years ago I arranged for an issue of thirty-one French dialogues, which were not at all bad; they remained little known—because the Company did nothing to bring them to the notice of schools—until (oddly enough) the war took them into the trenches. The latest I have heard about them is that they have been withdrawn from stock. Another scheme provided for in 1906 has been repeatedly taken up and dropped again. This curious lack of vision has checked the use of talking machines owing to the small number of records suitable for school purposes. What is wanted above all is a good representation of normal speech, with an average pitch that is fairly high. Records giving this would be very valuable aids in conveying intonation, a subject difficult to teach. For guidance as to individual sounds the talking machine is of much less importance, and must always remain much inferior to the well-trained teacher. There are some very fine records of a different type, famous pieces of literary interest spoken by great actors and actresses, which are a treat for an advanced class and fascinating to the student of intonation; but they are not of any direct service in the school.

What, in the present economic circumstances, must also be regarded as a luxury, is the moving picture. There are some beautiful films of foreign architecture and scenery

which one would like to be available in every school; but that is a dream of the future. In the meantime good lantern slides serve the purpose very well.

The appeal to the eye is a powerful one, and even a moderate expenditure will secure good reproductions of the world's great pictures. In many schools the walls present a distressing jumble of pictures, good, bad, and indifferent, arranged according to no plan. The Americans have wisely instituted a "Better Speech" week; I wish we could institute a "Good Picture" week. For the first occasion we might ask Dr. Hayward to write us a Thanksgiving Service to Great Artists, to be followed by a bonfire of all the bad pictures now dishonouring the school walls. Only the best pictures should be allowed to remain; and these should be grouped according to subject matter, schools of painting, &c. One of the rooms might be set aside for the works of French artists. The pictures on the walls should not be too numerous; and it is well to have frames of which the back can be readily removed, so that the pictures can be changed from time to time.

There are many smaller pictures that can profitably be used for illustrating lessons: picture postcards, illustrations taken from magazines and newspapers, advertisements, posters, can be contributed by the pupils, who can easily be made to take a pride in adding to the school collection of pictures. These should be mounted on stout brown paper. I have found it convenient to have paper cut in two sizes, 5 by 6½ and 8 by 10 inches; larger pictures can be kept in a portfolio. These can be regarded as three series, indicated by A, B, and C, the pictures in each series being numbered consecutively. A card-index will show which pictures deal with any particular subject, and may be used also for references to illustrations in books available in the school library. Such a picture collection will serve the purposes not only of modern language teaching but will also be useful to those concerned with art, history, geography, &c. One great advantage of this plan is that the work connected with it can be done largely by the pupils, one of whom can be appointed curator of the school picture collection.

Attention may also be drawn to the use of the stereoscope. Messrs. Underwood & Underwood have a World History series, which includes a set of stereographs of the "French Revolution and Napoleon," and 100 stereographs of France, and 100 of Germany, in their "Travel System."

A little museum may also be established in which a variety of interesting objects can be displayed: specimens of coins, stamps, railway tickets, &c.; characteristic peasant pottery, embroidery, &c.; dolls dressed in national costumes; a model of a theatre in Molière's time, and so on.

The modern language teacher will also be glad to have a good map of the foreign country with which he is concerned, and it should preferably be one in which the names have their normal foreign form. There are some excellent maps of France by Vidal-Lablache. It need hardly be said that maps, as well as sound-charts, should never be suspended on the wall of the classroom except when they are needed; they are not objects of intrinsic beauty. For the same reason the wall pictures often used in connexion with the early teaching of a foreign language should be removed as soon as the lesson is over. These, like maps and charts, naturally have to face the class, and occasionally they are placed over the top of an easel blackboard. This is objectionable for several reasons. It is not costly to fix pulleys in such a way that pictures can easily be raised to a suitable height and removed when not wanted.

I have dealt with music and art as providing auxiliaries to the modern language teacher; and it may not be out of place to consider the help that can be derived from the drama. I do not refer to the reading of plays, which is part of the ordinary curriculum; though it may not be superfluous to utter a note of warning against the pre-

mature study of seventeenth century French plays. The worthy desire to introduce pupils to classical literature often leads to its being studied before the First School Examination, although the pupils have not yet read anything like enough modern prose or acquired any idea of the social and political conditions of seventeenth century France. Without the required foundation and background, "Athalie," and even "Les Femmes Savantes," may fail to attract and even produce a lasting distaste instead of stimulating to a further study of the classics.

Much attention has been given in recent years to the application of dramatic methods in securing the appreciation of English literature and in vivifying the study of history. In the teaching of a foreign language they are valuable as a means of instruction. Especially in the early stages nothing is better worth learning by heart than simple dialogue; and some of the first courses in use recognize this by supplying conversations that lend themselves to this purpose. The pupils identify themselves with the characters that appear in the book; the scene is translated into action; and unconsciously the use of common words and phrases is impressed on the mind. Even in the middle Forms an occasional scene, like those in Mr. Stewart Walters's "Épisodes en Action," may be memorized with advantage; or selected scenes from such an amusing and well-known play as "La Grammaire" may be acted. The performance of a French play at speech-day is a familiar feature; but I doubt whether quite enough use has been made of acting in the classroom, with every pupil learning every part.

I need hardly say that membership of the Modern Language Association may prove helpful to the teacher in many ways. Apart from the inspiration to be derived from "Modern Languages," which I am glad to say has recovered from its temporary aberrations, there are several forms of its activity that can be utilized with a view to interesting our pupils. Thus there are two ladies who arrange international correspondence for boys and girls respectively. For a trifling fee schools are "paired" for this purpose, or individual pupils are brought into touch with foreign children. During the last two years 58 boys' schools in England and France have been paired. It is interesting to note that in 1921 the number of applications from France has declined noticeably; this can only be explained by what we hope is a passing cloud in the Entente Cordiale. The deficiency has been to some extent made up by a good demand for correspondents from Belgium. Owing to this it was possible to supply 1,100 French-speaking correspondents in 1921. Successful efforts have been made to get into touch with schools in German-speaking Switzerland, and this branch of the work is expected to develop considerably in the near future.

The children usually write about once a fortnight in French (or German) and English alternately, and letters in the foreign language are corrected and returned. From the fact that very few complaints have been received it may be inferred that the correspondence is in general satisfactory, and there is no doubt that, while it furthers knowledge of the foreign language, it is also the means of broadening the outlook of those engaged in it. Sometimes it leads to an invitation to visit the foreign country in the holidays. The Modern Language Association has a special department for arranging the exchange of children in the holidays. Some schools have availed themselves of this with excellent results. Before the War as many as 100 exchanges were effected in a year, but in the last few years the number has been much smaller, chiefly owing to the increased expense for fares, passports, &c., and—in the case of France—to the unfavourable rate of exchange. Beyond travelling and incidental expenses, the child (or adult student) has nothing to pay. Each family boards its guest and in many cases entertains him very generously. The fee charged by the Modern Language Association for each applicant is 10s. 6d. The period of exchange is from

one month to one year, and the age of the applicant must be over 12.

Occasionally an enterprising teacher takes a group of picked pupils for a short visit to Paris. If carefully arranged, the cost is not great; and under expert guidance most of the famous buildings can be seen and appreciated in ten days. It is of course not enough time for exhausting all that Paris has to offer, but it is very stimulating, and may well lead to further visits when the pupil has left school. It serves a different purpose from the individual's stay in a family, and naturally does not increase the knowledge of the language in the same way.

There have been boys' camps, usually somewhere on the north coast of France. They are no doubt interesting for a change; but I do not think that they often bring much gain from the French teacher's point of view; the boys talk English among themselves, and they do not get much opportunity of observing French life and ways.

This enumeration of various ways in which the modern language teacher can supplement his class work shows how much progress has been made since the days when I was a boy. I am not sure that it is complete, though on reading it through I have noted only one omission: the French "cercle" or German "Kreis," which I have found established in a number of schools. At these reunions, which take place fortnightly or monthly, the foreign language only is spoken. Plays are read with divided parts or rehearsed for performance, games are played, songs are sung, and the more advanced pupils read papers on some subject of literary interest. The management is best entrusted to the pupils, the staff acting in an advisory capacity.

I should be glad to think that this article may prove suggestive to some of my fellow-teachers; and I am sure the columns of this journal will be open to any who desire to add to it from their own experience.

TOPICS AND EVENTS.

MUSIC TEACHING IN SECONDARY SCHOOLS.—The report, which the Principal Inspector of Music has recently issued through the Board of Education, now makes its appearance as Circular 1252, and the criticisms and recommendations contained therein should be noted by all engaged in the work of music teaching.

The progress made in the last seven years—i.e. since the circular on Music in Secondary Schools was issued—gives one a general impression of disappointment, says Dr. Somervell, and he proceeds to give the following criticisms which are here briefly summarized:—

1. The teachers seldom work to a definite syllabus.
2. The pupils are not given a definite standard to work to.
3. The material used for sight reading is often unsuitable, and the supply of books inadequate.
4. The number of songs learnt by the children is much smaller than it should be.
5. The teaching of the staff notation is often unnecessarily postponed.
6. Aural training is seldom found to include ear tests for rhythm.

In this report Dr. Somervell offers much sound advice as to the way the necessary improvements may be effected. The music class teacher of the past has had but little preparation for his important task, and has generally approached it with but the knowledge derived from the study of his particular instrument, or the human voice alone. But now, all the leading musical institutions have special courses for the training of music teachers, and the class teacher of the future should be better equipped for his task, than were his immediate predecessors.

THE TEACHING OF NATURAL HISTORY IN SCHOOLS.—There has recently been issued by the Zoology Organization Committee (Section D, British Association) a Report calling attention to the neglect by school authorities of the animal side of Biology, and strongly urging the claims of Zoology to be included in the

curriculum as part of the education of every boy and girl. The Report of the leading Zoologists who compose this Committee points out that, among civilized countries, in England alone can a boy or girl leave school at the age of 18 without having received any instruction in animal physiology or the natural history of animals. In Japan the middle school (14-19 years of age) courses include, in addition to Botany and Physiology, a two years' course of Zoology of a very high standard, which is taken by all scholars without exception. Objections that are raised against Zoology as a school subject are considered in the Report; valuable practical suggestions are made as to how such difficulties as do exist may be satisfactorily and without heavy expenses overcome; and a schedule of subjects, based on what is actually being done in a few schools, is offered. Nor is the moral aspect of the matter omitted: knowledge of the ways and adaptations of animals is the surest remedy for cruelty; of the structure and working of our own body almost a guarantee of self-respect and clean living; while it is only by means of animal biology that the phenomena of sex-reproduction can be adequately and wholesomely imparted.

A PICTURE FILM OF BURMA.—Solar Films, Ltd., are presenting at the Philharmonic Hall, London, a film story of Burma as the first of a series of travel films by means of which it is hoped to arouse interest in, and stimulate good feelings towards, distant parts of the world. The film is orally described during its presentation by the leader of the expedition which was specially made to obtain the photographs, and one is glad to miss the laboured text usually thrown on the screen. When the film has been cut by the elision of many feet where the interest is neither human nor pictorial, so that the performance will take about an hour, it will be a valuable study in geography suitable for use in schools. Without the flashes of dry wit from the lecturer the presentation as made at the Philharmonic Hall would have been tedious for at least a third of the time. The film does not aim at presenting a complete picture of the country, for we noted the omission of pictures of the ruby mines, Burmese at work in the paddy fields, overseas shipping at Rangoon; on the other hand, the novelty of the pictures of a Shan woman and her earrings, the Burmese dancers, and the leg rowing of dug-out canoes for passenger or cargo transport appeals strongly to the wonder element in children, both young and old.

CONFERENCE OF EDUCATIONAL ASSOCIATIONS.—Copies of the Report of the Conference of the Educational Associations, held during January, can be obtained from the Conference Secretary, 9 Brunswick Square, W.C. 1; price 5s. 6d.

BRITISH ASSOCIATION REPRINTS.—A number of reprints of reports presented to, and discussions which took place at, the Edinburgh meeting in September last of the British Association for the Advancement of Science, have been published from the office of the Association at Burlington House, Piccadilly, W. 1. The following will be of interest to teachers: No. 1, "Science and Ethics," by Dr. E. H. Griffiths, price 9d.; No. 2, "The Structure of Molecules," price 9d., a report of the joint discussion held by Sections A (Physics) and B (Chemistry) on this subject; No. 5, "Charts and Pictures for use in Schools," price 1s., consists of the report of the committee appointed to inquire into this matter; No. 6, "An International Auxiliary Language," price 1s., another committee report presented to the Association; and No. 7, Report of the Conference of Delegates of Corresponding Societies, price 2s. The latter includes Sir Richard Gregory's presidential address, "The Message of Science." It will be extremely useful to have noteworthy papers, reports, and discussions of this kind in a handy pamphlet form, and it is to be hoped that the practice of issuing these reprints from the Annual Report will be continued.

THE LIBRARY IN AMERICAN SCHOOLS.—ASSOCIATION OF UNIVERSITY WOMEN TEACHERS.—At a meeting of the Association of University Women Teachers, held at the London Day Training College on February 13, Miss Alice Woods gave an account of library work in America. The great object of American libraries is to educate the people by covering every subject and uniting recreation with æsthetic pleasure. In Massachusetts there are 114 libraries, which are of three kinds: (1) public libraries, almost entirely supported by the State; (2) free libraries, established by gifts and receiving grants from the State; and (3) institution and private libraries belonging to colleges, schools, &c. Much is done to interest the general reader, especially when the library is connected with a museum, by the arrangement of exhibitions and classes and by the lending of pictures as well as books. A prominent feature of the library system is the importance

attached to school libraries. For the post of school librarian a degree and good training is in most cases essential. The librarian, generally a woman, is expected to give lessons and talks on books and the use of libraries and also to supervise each child's reading; an interesting feature in this connexion is the writing of reports by the children on the books they read. She is responsible for the purchase of books and often has to act as adviser not only to children but also to teachers and parents. The public libraries frequently provide books and illustrations in connexion with particular subjects for use in schools.

AN EXPERIMENT IN INDIVIDUAL TRAINING.—An experiment in operation at the Clapton Secondary School was described by Mrs. O'Brien Harris at a meeting of the Association of University Women Teachers, held on February 13 last. The three middle school years are united by the introduction of a house system, and a girl remains in one house for at least three years before joining girls from other houses. Each girl is given an individual time-table within the limits imposed by examinations, and the main subjects are divided into ten stages. Stages 1 and 2, covering about a year, are taken before the girl enters her house; stages 3 to 7 inclusive cover a minimum of nine terms, during which period the girl remains in her house; stages 8, 9, and 10 belong to the matriculation year. This scheme leaves considerable freedom in the choice and arrangement of work, so that it is not necessary to do every subject during the whole of the three or four years. Girls can pass from one grade to another in a given subject without being restricted by the necessity of keeping with the other members of a form, and, in addition, the arrangement allows time for outside reading. About one-third of the time is devoted to manual work, such as drawing, weaving, spinning, and needlework. At the beginning of the term a time-table is drawn up to include all the stages that were likely to be wanted in any subject. The work of each girl is then adjusted in accordance with this and she is allowed freedom of choice in so far as her individual work will fit in with the general time-table, while she may, if not at a class, work in the library. The system, while allowing the girls considerable individual freedom, allows a larger proportion of teaching than is possible under the Dalton plan.

UNIVERSITIES AND SCHOOLS.

WALES.

Welsh Local Education Authorities do not look with a favourable eye upon the Government proposals to cut down expenditure on education, and protests have already been made in several of the most important areas against any measures which will tend to diminish the efficiency of education. The general trend of opinion in Wales is that there is only a very limited scope for curtailing expenditure in education, since the educational services have been carried on in the past at a minimum cost and with inadequate resources. Secondary education in particular, owing to the absence of endowments and large benefactions, has been severely restricted in its developments, and it is only by considerable sacrifices on the part of the middle classes and the artisans that the present system has been established and maintained. Salaries were low, and the funds available for appliances were scarcely sufficient. It is therefore felt very strongly that if the more favourable conditions under which the work has been carried on during the last few years are upset, the country will lose much more in efficiency than it will gain financially.

In the domain of higher education it is also notorious that the proper development of the University has been seriously handicapped throughout by lack of funds, and therefore the suggestion that there should be any curtailment of its resources is viewed with grave concern by the University authorities. Whatever may be possible therefore in England in the way of economy, there is little room in Wales for cutting down educational expenditure, for in all branches of education the struggle against adverse financial conditions has been continuous. The traditional attitude of Wales towards education is a sufficient guarantee that it will not be enthusiastically in favour of reducing its present educational facilities.

The Cardiff Education Committee have resolved to support the protest of the Manchester authority against the proposal to decrease the facilities for secondary education by limiting the number of free places and to increase the size of classes in the

Educational Expenditure.

Higher Education.

Attitude of Authorities.

elementary schools. Intermediate education is estimated to require a sum of £30,962, of which £18,511 is allotted to salaries, and technical education £55,898, of which £22,910 will be paid in salaries. It is also interesting to note that the city has undertaken to pay the difference between the scale allotted to the elementary teachers by the Board of Education and the actual scale agreed upon by the Committee. The same attitude towards the Geddes report is adopted by Monmouthshire and by the Rhondda Education Committee. A curious situation has arisen in Merthyr Tydfil over the payment of the penny rate towards University education. The full amount due from the Council is £1,030, but for some unexplained reason only £900 has been collected. The University therefore will have to be satisfied with a diminished total.

It was practically arranged that this College should be transferred to the University College of Swansea on April 1, and arrangements were nearly completed. It appears, however, that the Treasury have raised objections on financial grounds to the proposal, so that the scheme is not likely to be carried into effect at present.

The first week in March was set aside by the University College for inter-collegiate games and debates. Lectures were suspended and festivities of different kinds were substituted for them. As the result of the inter-college competitions, Cardiff College will meet Bristol University in the semi-final of the Inter-University Rugby Championship.

Negotiations have commenced between the Council of Swansea University College and the Glamorgan Education Committee for the establishment of a Mining School at Swansea. The school will cost about £80,000 to establish with an annual expenditure of £4,000. The Central Welfare Committee formed under the Mines Act is to be asked for a grant towards the cost. This Mining School, when established, should prove to be a most valuable centre of instruction as Swansea is situated in close proximity to the anthracite coalfield. The Schools at Treforest and Crumlin cater for the needs of the eastern area and therefore there is no reason why the new school at Swansea should encroach upon the ground already covered by the former.

Mr. Fisher, in reply to a question in Parliament, stated that the number of full-time Inspectors in Wales, of all grades, is twenty-seven, and that the total cost is £22,954.

SCOTLAND.

The spate of memoranda, articles, and speeches, on Circular 44 shows no signs of abating. The interest displayed in the matter of higher education as it affects the people at large is really extraordinary, especially at a time when there are so many other calls on public attention. Either the old-time zeal for education is more alive among us than is commonly supposed, or Scotsmen cannot let a fine chance for controversy pass too quickly. One good feature of the discussion is that it is gradually bringing out fresh views. The point made by Mr. Clark, the Glasgow director, seemingly on special information, that the scheme of the Circular in its essentials was all ready three years ago, provides an answer to those suspicious persons who read it as a kind of appendix to the Geddes Report. It is certainly reassuring to know that it was not in prime intention an economy scheme, and makes it the easier to prevent it becoming so now. If there is one thing on which Scottish opinion is thoroughly sound it is the need for more rather than less money being spent on post-primary education. The significance of a remark made by another well-known director that teachers may well find that the effect of the policy of the Circular will be to diminish rather than increase their freedom, is also being realised. Behind the several proposals seems to be an endeavour to transfer as many of the functions of the Education Department to the local authorities as possible, and though insistence is laid on the co-operation of authorities and teachers, there is a considerable likelihood that the change may involve a closer and more restrictive supervision of school work by local officials in place of the remoter and less interfering control of inspectors. Teachers in urban districts are generally aware of the danger, and are pressing forward with proposals for joint control of examinations, &c., but so far the rural teachers seem to be doing nothing. The opportunity for putting the professional ideal of self-government into limited practice is waiting to be

seized, with the possibility of decreased powers as the penalty of failure.

Even before the publication of the Geddes Report a number of the authorities had started to reduce their staffs, some by increasing the size of classes, others by insisting on infants' mistresses and head masters in smaller schools taking full charge of a class. Mr. Robert Dickson called attention to one serious side-effect of this policy at a recent meeting of the Edinburgh Provincial Committee. He said that he could foresee that a great number of students leaving the Training College would not find places for a considerable time, and he suggested it would help to prevent unnecessary unemployment among young teachers if next year the normal course were extended to three years, and no students admitted without the full-leaving certificate. It was somewhat paradoxical that on the same day the pressing need of a substantial increase in the number of students for the teaching profession was being urged in the Glasgow Provincial Committee. The Rev. Dr. Murray pointed out that in the district served by the Committee there was an annual wastage of 500 or 600 teachers, and that over the five years from 1920 to 1924 the average number leaving the College yearly would be only two-thirds of that. The fact is that both the Edinburgh and the Glasgow statements are correct. There is impending a serious shortage of teachers, and yet for some months to come there is likely to be unemployment among young teachers. The situation is indeed more difficult than is commonly thought, and the Provincial Committees will deal with it at once if they are wise. With teachers waiting long for openings and a prospect of reduced salaries, the present increase in the number of new entrants to the profession will come to a dead stop, and the shortage of teachers will in a few years become very serious.

The situation is already critical in the case of teachers of special subjects like art, manual training, and domestic science. Even at ordinary times the supply of such specialists tended to exceed the demand, and now that some of the authorities, with an ignorant disregard of the great importance of these subjects, are beginning retrenchment with them, the waiting lists for appointments are full up for a long time ahead. In these circumstances all these groups of teachers are asking that the standard of entrance qualifications be raised. All of them want the leaving certificate as a preliminary qualification, and the domestic science teachers ask an extension of training for some of their numbers, in addition. In view of this the matter of a Degree in Domestic Science has been brought before the Council of the Educational Institute and the Secondary Committee of the Council is now taking steps to bring the proposal before the University Courts. The scheme as outlined is for a degree like the B.Sc. in Agriculture or in Engineering, in which certain scientific subjects of a general character will be taken at the University, while the peculiarly domestic subjects will be taught as at present in the Domestic Science Colleges so as to give a guarantee of high attainments on the practical side. The times are not very propitious for such a venture, but if, as the exponents of the scheme suggest, it can be reached by a co-ordination of effort on the part of the universities and the colleges without any considerable extra expenditure, it may have a chance of success. The universities, as concerned with the scientific bases of all the great concerns of human life would do splendid service, not merely to woman-kind, but to the whole community, by putting domestic science on a footing of equality with the practical subjects already recognized by them. Not the least important effect of this academic recognition of the sciences and arts of the home would be its influence on the status of the feminine interests in the schools.

By agreement between the Glasgow Education Authority and the Education Department a special case was submitted to the Court of Session in order to settle a point which has been in dispute since the establishment of the new authorities. Under the Act of 1918 an authority might make payments to its members for expenses necessarily incurred and time necessarily lost from ordinary employment in attending meetings, at the rate of 7s. 6d. for a half-day, and 15s. for a whole day. The question at issue was whether this provision was only intended for artisans and others who would lose wages through absence from work, or was due to professional and business men as well. For the purposes of the action the first four persons on the alphabetical list of Glasgow members in the latter position were taken as representative, the four being

a doctor, an accountant, a minister, and a manufacturing stationer. The judgment of the Lord President of the Court of Session was in favour of the Education Department in all four cases. In the case of shopkeepers and in professional vocations of all kinds, he did not say it would be impossible in any circumstances to show that the withdrawal of a man from his work during part of his ordinary working day caused him a necessary loss. But it was not enough to establish a necessary loss of remunerative time to say that a clergyman was in charge of a cure, or that a medical man was conducting a practice, or that an accountant ran an office in town. The decision has met with general approval even on the part of those affected by it. It is recognized on all hands that professional men should not make personal profit out of their service to the community on public bodies. In view of the fact that many "economists" are casting aspersions on the authorities who paid all members' expenses, it is but right to add that the errant authorities had ample warrant, if not in the ambiguous terms of the Act of 1918, at any rate in the definite statements of Mr. Munro in the House of Commons when this section of the Act was under consideration.

The Emslie Case Again. After four years the Emslie case continues to distract Scottish teachers, a veritable old man of the sea for the Educational Institute. The latest developments only make more difficult and more puzzling a very difficult and puzzling situation. First of all a special committee of the Council of the Institute, practically reversing the findings of last year's special Committee, has declared that Mr. Emslie was unjustly dismissed from Spier's School, Beith, in 1920, and that for the conflicts with the teachers of the school which led to his dismissal, not Mr. Emslie but the teachers were to blame; and following on that the Council of the Institute without committing itself very definitely to any course of action, agreed to make him a payment of £2 a week since the date of his dismissal. A week later the Court of Session, to which Mr. Emslie, acting on his own initiative and without the backing of the Institute had appealed, pronounced adverse judgment both on his case and on himself. His criticism of the previous management of the school was repelled, his attitude to his teachers condemned, and his contentions that he had been illegally dismissed set aside. By this decision the Council of the Institute is put in an awkward position. Whether it spends money in backing Mr. Emslie in further legal proceedings, or comes to the conclusion that Mr. Emslie having got into deep waters through disregard of previous advice is not to be helped to plunge still deeper, the case seems likely to go on, because there is really no satisfactory way out.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

University Reports. So far as we can judge, it is in the direction of Research that the American universities are expending most energy and making most progress. The Report of the President of Johns Hopkins University for 1920-21, lays stress on "the encouragement accorded by this institution to research." So President Butler, in his Report on Columbia University in 1921, tells how his academy has in full operation an Institute of Educational Research and an Institute of Cancer Research, whilst Research Institutes for electrical physics and public health are germinating. He writes, moreover, significantly: "The time will soon come when to the other research undertakings of the University there may be wisely added an Institute of Industrial Research, the scope of which shall include not merely the strictly engineering problems of industry, but also those human problems upon the proper solution of which the permanent effectiveness of industry must ultimately depend. The work of this institute would invite the co-operation of the engineer, the psychologist, the economist, and the sociologist." Both the Reports are of a hopeful sort. We observe that on Commemoration Day at Johns Hopkins the invocation was pronounced by Dr. William Rosenau, Rabbi of Ohel Shalom Synagogue—which will shock Oxford. President Butler's Report is, as usual, wide in view. He incorporates in it an account of the several Presidents of Columbia, himself the twelfth. We confess to a little human sympathy with the second, the Rev. Myles Cooper, who "beat a precipitate retreat on May 10, 1775" in consequence of certain epoch-making events. A Fellow of Queen's College, Oxford, in 1758 he had printed a volume of poems, and in 1763, only twenty-eight years of age,

he was appointed to Columbia, or "the College at New York"—he, too frail for the coming storm.

About Teachers. In the *Educational Review* (LXIII, 1) an able article, headed "Spinning Sand," throws light on the shortage of teachers in America, and may have something of suggestiveness for Britain. We extract some of the luminous matter. The average life of the American teacher is three and a half years. In the schools nearly 185,000 posts become vacant every year; there can be obtained from all sources only 25,000 trained, or partly trained, teachers; it follows that 160,000 posts must be filled by the untrained. "The teacher-training schools are busily engaged in trying to spin the raw human material with which they deal into the strands of a mighty cable for that anchor of all our democratic institutions, the American school system. But they are simply spinning sand. No such cable can be fabricated from the material at hand and under the conditions which now obtain."

Teaching as a Profession. If America is to have schools in which the citizens of its complex democracy, with an international outlook and international associations, may learn to "think straight and to think through to reasonable and tenable conclusions," teaching, says the writer of the article, must be made a real profession, the business of a life-time. How stands it now even with those in training? "The observant teacher of prospective teachers is aware of some strange and disquieting things as he views the procession of young people in the halls of a teacher-training college. The procession is feminine—ten girls and then one lone boy. These girls are young and full of life. They are in school for the most part to take a two-year course, the shortest possible which will allow them to teach, and at the same time exempt them from taking biennial examinations for the renewal of a certificate to teach. They dress in the current fashion. The clothes they wear in school are better than the wives of their instructors can afford for dress occasions. French heels, pointed toes, and silk stockings are plainly visible. The skirts are as narrow as the narrowest. The hair is puffed around the ears. Every girl preparing to teach entertains a secret hope—and they are not so shy in 1922 but that the discerning man might guess the secret—that her excursion into teaching will be brief and will end in matrimony. Why not? The right is hers. Through marriage she is only fulfilling her destiny." As to the young men, outnumbered, as it was said, some ten to one by girls, only a few expect to teach permanently; many seek from teaching nothing but the money with which to get a professional education or to set themselves up in business.

The Married Woman as Teacher. Of the means by which the American writer proposes to attract and keep recruits for the army of educators we indicate only one—the retention at good salaries of married women as teachers. *Not laying down any law ourselves*, we submit the quotation that follows to the attention of local education authorities in England who may be disposed to lament a shortage of teachers. "The married woman's salary as a teacher should be large enough to enable her to employ a housekeeper to perform the manual duties of preparing the meals for the family and managing the house, thus leaving the teacher-mother her time at home free to be devoted to her husband and children, with an ample margin for reading and for rest and recreation. In addition to this, she should have enough money above what she pays for service to make it worth her while to be a professional woman performing a regular daily service for the welfare of the community. Again, the married woman who teaches should have a reasonable leave of absence with pay at the time of the birth of a child. A programme like this would induce girls to take a full course of serious training for teaching. They could do so with the knowledge that the technical training they are getting in the teachers' college is to be useful for life, that it will not bar the way to matrimony, even that such a training, and the ability to contribute in money to the support of a household and family, will make them more sought after as wives than are girls who are wholly dependent upon their husbands' earnings."

About Teachers of English. There was in England a Dark Age when the teacher of English was one assumed to know English because of his ignorance of classics and mathematics; just as it was once assumed that a German, being a foreigner, would necessarily know French as well as German. Times change. In the United States there is a representative National Council of Teachers of English. At its last meeting it was proposed that the Council, through its Committee on Scientific Investigation, should set up some tests of any person's fitness to teach English, and then standardize these tests by rigorous

(Continued on page 228.)

W. & A. K. JOHNSTON'S NEW "EFFECTIVE" WALL ATLAS OF EUROPE.

6 Maps (size 28×34 inches), clearly and strikingly lithographed in colours, mounted, dissected to fold, and eyeletted. Price in strong case, 35s. net per set. Single maps, 6s. net each.

No. 1.—Physical and Communications.

No. 2.—Summer Pressure and Rainfall.

No. 3.—Winter Pressure and Rainfall.

No. 4.—Summer Temperature.

No. 5.—Winter Temperature.

No. 6.—Political.

These maps have been carefully prepared in order, as far as possible, to "tell their own story," and make Geography teaching really effective by allowing the pupil to visualize together both geographical causes and their effects.

MACMILLAN & CO., LTD., 81, MARTIN'S STREET, LONDON, W.C. 2.

scientific procedure. When this work is completed, said the proposer, it should be possible to forecast a candidate's probable success in the teaching of English, and also to find the weak spot in the equipment of any teacher actually in service. We suggest that some training in voice-production should be one of the qualifications required both in America and in England.

MEXICO.

Mexico, a land of past romance and of epidemic revolution in modern times, has recently set an example to the world in the serious interest it is taking in education. Hitherto, in addition to its national troubles, it has been mainly in the American public's eye either as the land most convenient for oil exploitations, or as the nearest field for missionary endeavour. There is now ample evidence that the seeds of education sown by the latter are producing a remarkable harvest. The Government have allotted in their 1922 Budget, 45,000,000 pesos to the development of public education as against 9,000,000 pesos in 1921, and 2,000,000 pesos in 1920. It is a striking fact that this tremendous increase in the Educational Budget is concurrent with the cutting down of the War Budget for 1922 to 33 per cent of the total as against the 80 per cent of recent years. The new Minister of Public Education is initiating a great scheme against illiteracy, and is also distributing widely a monthly review entitled *El Maestro* (The Master) dealing with educational matters. Different schools of the National University of Mexico have already more than 7,000 students, and there are 12,000 students on the register of the Mexican technical schools. The National University of Mexico is also doing valuable work through an editorial department. It is publishing the masterpieces of the world's literature and presenting free copies to the libraries of the country. The whole aim of the new educational system is to develop a true sense of social responsibility and of the value of human personality.

CEYLON.

According to the Education Report (just received) for 1920, the total number of pupils returned as attending at school in that year was 397,950. In 1919 it was 409,736; thus there was a decrease of 11,786—a consequence mainly of epidemics, whilst the shortage of food during the year kept many children away from school. So valid were the excuses for non-attendance that prosecutions for it were suspended in several districts. Efforts were made to relieve the general distress through the schools. At Colombo the municipality voted a sum of Rs.5,000 for free meals to children in the town schools, and in the Maligakanda, Green Street, and Dematagoda schools meals of barley and sago congee were supplied. Yet in spite of these free meals the attendance was bad: the children were needed at home or they belonged to the floating population of Colombo which moves whither labour is required. In the vernacular schools of Ceylon it was found hard to maintain any standard of "personal hygiene." In the English schools, a satisfactory feature was the attention paid to physical exercises and sports, old Sinhalese and Tamil games being introduced with much advantage. In the Report of the Inspector of Secondary Schools we find again that condemnation of the waste of time in conveying a mere smattering of Latin which comes from so many parts of the Empire. We exported the tradition of classical education, but not the machinery. The "cultural value" of Latin ill taught for two or three terms is *nil*, and Britain beyond the seas is proclaiming the fact.

There were in 1920 about 126,000 girls under instruction, a smaller number than that in the previous year and representing only 40.8 per cent of the girls of school-going age. Creditable results were obtained in the Cambridge Examinations. The schools were, for the most part, well organized and sufficiently equipped; but there were deficiencies to be observed in respect of physical training and the use of outdoor games. For lack of capable teachers there were several schools that had no singing classes. The Inspector urges that more pains should be taken to make the girls open their mouths and to teach them what the organs of speech are, and how particular sounds are formed.

QUEENSLAND.

Last year the Queensland Teachers' Union passed a resolution: "That the Senate of the University be requested to make its education free to all qualifying by examination." The Acting Under-Secretary of the Department of Public Instruction replied

that, were fees abolished, it would be necessary to raise £6,650 a year from other sources. In many parts of the Empire academies, with all their fees, are being compelled to ask for external, in addition to State, support.

SWITZERLAND.

Switzerland takes interest in the new testing of vocational aptitude. At Zürich the Jugendamt of the Canton has established what is called a *Psychotechnische Prüfungsstelle*, or place of psychotechnical examinations, where, without charge, are tested any "young persons" who are sent by the ordinary vocational advisers. It is stated that many large firms have studied with approval *Psychotechnik* and its methods. We indicate briefly the progress that has been made in this field. At first the aptitudes of the child were examined, and it was asserted speculatively that he was fit for this or that trade. Now the trades themselves are being probed, to discover what are the exact demands that each makes; what in body and mind it taxes.

LITHUANIA.

The Statistical Bureau of the Lithuanian Ministry of Education has issued figures concerning the development of popular education last year. At the present time there are throughout the country fifty gymnasia and pro-gymnasia with an attendance of 7,808 boys and 5,640 girls. Of the gymnasia fourteen are governmental institutions. There are twenty-five pro-gymnasia of which twenty are Lithuanian, three Jewish, and two Polish. The ratio of Lithuanians is far larger in the Government gymnasia and pro-gymnasia than in private institutions. In Government educational establishments the total attendance is 3,326, of whom 95 per cent are Lithuanians. In private establishments the attendance is 5,947, of whom Jews number 3,364, Lithuanians 1,386, Poles 851, Germans 179, Russians 153, Letts 17, and others 3.

PRIMARY SCHOOL NOTES.

The Attitude of Teachers.

THE strong opposition of teachers to the "cut" of 5 per cent upon salaries for superannuation purposes can only be appreciated by a clear understanding of its significance. It is not known, for example, that under the terms of the contributory pension scheme which existed prior to the introduction of the existing Act, large numbers of teachers were annually deprived of a portion of their salaries without any return being given; and there was no option to refuse contributions. Teachers who retired before the age of sixty-five years received no benefit, neither did women teachers who left the profession upon marriage. Ordinary insurance companies gave much superior returns for the same premium, and the Government made a handsome profit by its extortions. It has been estimated that a man class-teacher receiving scale III of the Standard Burnham Scales would pay, upon the basis of a 5 per cent contribution with compound interest at the rate of 5 per cent, upwards of £1,800 towards his superannuation at the close of 40 years of service. Allowing for the deferred salary payment, such a teacher would have to live more than eight years before he secured the return of his own subscriptions. And as the break-down allowances of the present Act are based upon the payment of one-thirtieth of the annual salary while the proposed contribution is based upon one-twentieth of the annual salary, it is obvious that teachers are not likely to accede to such a proposition.

The Easter Conference at Torquay.

THE Annual Conference of the N.U.T. is likely to assume national importance this year. The proposals of the Geddes economy have been received with such resentment by the community that their partial withdrawal by the Government has done little to appease it. There is deep anger at the suggestions to revert to large classes and to limit opportunities for higher education. The simultaneous cutting down of evening school courses will also be keenly criticized in many districts where substantial reductions have already been made. There is reason to believe that the electorate is looking to the teachers to give a lead upon these questions; and the elections at Clayton,

STANDARD FRENCH TEXT-BOOKS.

LE FRANÇAIS. A Practical French Course. By MARC CEPPI, Senior Modern Language Master, Victoria College, Jersey, and LL. J. JONES, B.A., Whitgift School. **Now complete in 2 parts.** Part I, 3s.; Part II, 3s. 6d.

This new course, founded on the recommendations of the Government Committee appointed to inquire into the Position of Modern Languages, 1918, is being extensively adopted; Part I is already in its 18th thousand. The course is written on semi-direct lines, and the subject-matter is closely related to the everyday life of the average student.

In response to numerous requests, an edition of Part I has been published for use with the Direct Method, printed in French throughout.

"I am at present using three of Mr. Ceppi's books in this school," writes a teacher of French, "and think that what he does not know about writing French books for boys is not worth knowing."

GRAMMAIRE FRANÇAISE MODERNE. By M. DESHUMBERT, late Professor at the Staff College, Camberley, and MARC CEPPI. 2nd edition. 3s. 6d. net. (Also issued with the *Grammatical Rules in English*.)

"The best of all recent grammars."—*Spectator*.

A list of Marc Ceppi's well-known works will be sent on request, including full details of the following readers:—*EASIEST FRENCH READER, SIMPLE FRENCH STORIES, CONTES FRANÇAIS, RÉCITS HÉROÏQUES, C'EST LA GUERRE, L'HISTOIRE DE PETER PAN, FLIPS ET COMPAGNIE, FRENCH DRAMATIC READER, TALES FROM MOLIÈRE.*

BELL'S ILLUSTRATED FRENCH READERS. With brief notes and vocabularies. Illustrated. 7 vols. now ready. 1s. 3d. each.

BELL'S SHORT FRENCH TEXTS. Edited by MARC CEPPI. Designed for rapid reading, and containing short introduction and brief notes or vocabulary. 6 vols. now ready. 10d. net each.

BELL'S STANDARD FRENCH TEXTS. Edited by MARC CEPPI. 6 vols. now ready. Prices from 1s. 6d.

This series of texts contains old favourites, carefully edited to meet the requirements of Schools and Colleges. Each volume is issued in duplicate form, one edition being entirely in French.

York House, Portugal Street, W.C. 2.

ISLE OF WIGHT, Bonchurch, Near VENTNOR.

Bonchurch Hotel, 1915.

THE above magnificent freehold Stone building to be sold for £3,000 or let on lease at £200 rent.

Until 1915 it was a successful Hotel, but was closed in consequence of the War. It stands 300 feet above sea level and is well sheltered, facing South. Magnificent Hall, Lounge, Billiard Room, and over 40 Bed, Sitting and other rooms, &c., &c.

Suitable for College or Training School or Hostel or Home of Rest or similar institution, or could be converted into a splendid residence.

For further particulars apply to

CHAMBERLAYNE, HACKING & Co., Solicitors,
83 Pall Mall, S.W. 1,

Or DANIEL DAY & SONS, Estate Agents, Bonchurch.

Camberwell, and Bodmin tend to prove that parents and friends of children are quite prepared, when necessary, to make education their politics. The need for a lead has become the more imperative in view of the complete failure of officials at the Board of Education to stand up effectively for the children of the nation at the inquiry of the Economy Committee. There is strong evidence that many teachers at the present time are anxious for the Union to take political action upon the education question. Hitherto it has rigidly refrained from such a course, the schools are the concern of all political parties, but failing the development of more favourable factors, it is quite possible that the Torquay Conference may revise this traditional policy.

Dismissals of Teachers.

REPORTS from various parts of the country indicate that economies are being made by the dismissal of teachers, and that, in view of their greater numbers, women are the chief victims. It is generally known that married women who had formerly been teachers were asked to resume service during the war when school staffs were depleted; and in view of the shortage of teachers special inducements were made in the Superannuation Act for the continued service of married women teachers. In order that the advantage of a proportionate superannuation allowance might be secured many of these teachers have remained in the schools where they have rendered splendid service. That they should now be specially selected for dismissal is unfortunate from every point of view; many of them are fully trained, and all possess long experience. The number of married women teachers in the schools may be estimated at 30,000, and their training has approximately cost the State £3,000,000. Their dismissal, in every case, means a loss of educational efficiency in the schools; to argue that the remaining teachers can do the additional work implies complete ignorance of the conditions under which class teaching is carried on. At the present time teachers are crying out for relief from the intolerable strain imposed by war conditions, which has not yet been perceptibly removed. If there is any considerable extension of the practice of reducing staffs immediate steps will have to be taken to safeguard the teachers who remain from the risk of breakdown. The abolition of clerical work, school inspection, the better distribution of school holidays, limitation of the curriculum are all matters requiring consideration in this respect; but that ultimate deterioration in the standard of national education will follow, is, unfortunately, the inevitable result of this type of "economy."

REVIEWS AND MINOR NOTICES.

PSYCHOLOGY OF EDUCATIONAL ATTAINMENT

London County Council.—Mental and Scholastic Tests: Report by the Education Officer submitting Three Memoranda by Mr. CYRIL BURT, M.A., Psychologist, on Mental and Scholastic Tests. (21s. King.)

It is well in these days to bear in mind that "economy" has a positive as well as a negative aspect. Spending less money is only the negative aspect. The positive aspect, and by far the more important, is to ensure that the money and energy is spent to the best advantage; and if in the present crisis the teachers, educational administrators, school doctors, and education committees concentrate their attention upon this aspect, future generations will regard the present regrettable necessity to economize as having some redeeming features. If, educationally, we cannot, during the next decade, get the desirable quantity, let us do our utmost to improve the quality of our products. To do this, it is necessary to make a searching inquiry of the shortcomings of our present educational system; and this in turn necessitates a detailed analysis of the educational attainments of the pupils at present in the schools. To enable us to undertake this analysis Mr. Burt's volume appears at a most opportune moment.

The book consists of three memoranda submitted by Mr. Burt, as psychologist of the London County Council, to the Education Officer. The first memorandum contains a discussion in detail of all the tests of the Binet-Simon Scale of Intelligence and of various suggested modifications

of it such as the Stanford Revision and the Point Scale. The notes upon the method of procedure and the evaluation of answers will prove most valuable to all teachers, doctors, and psychologists who use these tests. In these notes Mr. Burt has given us the results and conclusions not only of his own wide and unique experience, but also those of all the leading psychologists who have applied the tests critically. No better guide, if indeed any as good, could be placed in the hands of the person who wishes to learn how best to apply the Binet-Simon Scale.

One of the most welcome features of these notes is that the author has not restricted himself to the quantitative aspect of the tests. The Binet-Simon tests, like all other mental tests, are valuable in so far as they provide opportunities for the experimenter to observe the mental processes of the child in solving or failing to solve them. There is a danger that many who apply the Binet-Simon Scale think that the chief result to be attained is a scale of marks. Of greater importance is to observe carefully the distinctive character of the difficulties the tests present to the child, why they are difficulties to him, and how he tries to overcome them. To observe and not to measure is the primary function of any person who applies mental tests. Mr. Burt's notes give many valuable suggestions as to what the tester should look for.

Memorandum II contains an exhaustive analysis of the data Mr. Burt obtained by the application of the Binet and other supplementary tests. There is so much important matter in this memorandum that it is impossible in this brief survey to give an idea of the ground covered. Amongst the problems discussed are the order of difficulty of the tests for normal and mentally defective children, the allocation of the tests to appropriate ages, the distribution of intelligence, the line of demarcation between normals and defectives, the relation between mental ability and educational attainments, and the application of the tests to juvenile delinquents. One of the most interesting sections is that which deals with the diagnostic value of the various tests in the differentiation of mentally defectives from normal children; and the results given should lead to increased efficiency and much economy of time and energy in the application of the intelligence tests.

To teachers the most interesting memorandum is the third, which deals with tests of educational attainments. Norms of performances with most of the important school subjects for pupils of various ages are given in detail. Moreover, the author gives a masterly analysis of the psychological factors that make for success or failure in each subject. Of special interest are the detailed notes on individual cases of backwardness. Education as a science is primarily concerned with the individual child; and the psychologist carries most conviction with the teacher as to the importance of the study of the human mind, when he brings his science to bear upon the practical difficulties which the backward child presents. We hope Mr. Burt will give us in the near future studies of individual children similar to the most suggestive and helpful instances given in the latter part of this volume.

It is not too much to hope that the appearance of this book will mark a new era of better understanding and more complete co-operation of the educationist and psychologist. Primarily the volume must be judged as a statistical survey; and it is the most complete and thorough work of its kind yet published. It has been said that statistics merely propound problems, and experiments solve them. If this be true, the author has given the educational and psychological world not only reliable statistics—reliable as his discussions prove that he has an intimate knowledge of his vast mass of data—but also suggestive solutions of the problems his statistics present. Mr. Burt's volume will probably prove to be a standard work of reference that will yield valuable data to all administrators of education, class teachers, and school medical officers.

HYGIENE AND CHILD DEVELOPMENT.

The Hygiene of the School Child. By Prof. L. M. TERMAN. (Riverside Text-books in Education—Division of Secondary Education. 10s. 6d. net. Harrap.)

Prof. Terman's books on intelligence are deservedly so well known and appreciated that his observations on other factors in school life will receive a warm welcome. The present volume deals with the hygiene of mental and physical growth and with the fundamental facts of the physical development of the child. The author regrets that the attitude of modern education toward the body has been influenced by mediaeval rather than by Greek and Roman ideals; to the latter the disproportionate amount of training given to the thinking activities would have seemed preposterous; they would have agreed that knowledge without health cannot profit us, and that a strong heart helps us to resist temptation. The keynote of the volume is that thinking, biologically speaking, is never its own end but a means towards an essentially motor adaptation. Applying this to education, knowing would not be exalted above doing, much time given to book instruction would be replaced by opportunities for activity, the child's mind would cease to be the enemy of his body, and the welfare of each sought in the maximum culture of the other.

Special chapters deal with the laws of growth and the factors which more especially influence the process, malnutrition, the hygiene of the special senses, sleep, preventive mental hygiene, and some evil effects of school life. Educationists may appreciate the points as presented to them by a professor of education in a degree which the reports of school medical officers and even the text-books of school hygiene by medical authors, even of the greatest experience, have failed to produce. If there be any criticism of the balance of the book it would be that it is strongest on the psychological side in which the personal experience of the author can be read in every line, than on the medical side where he is forced largely to quotations. For this reason the book forms a valuable pendant to the current text-books in use in this country in which the balance is rather on the other direction. The attention of those teaching in institutions for higher education may be directed to the sections on preventive mental hygiene and on possible evils of school life which contain advice and suggestions of the highest import not easily obtained elsewhere. In particular he stresses the safety factor which it is the function of sleep, inattention, and other rest states to conserve. Inattention is therefore an indispensable factor in mental economy, a safety valve, not a moral fault; six or seven hours of interesting instruction daily would surpass the limits of safety. School reform is still needed; until there is not only good school construction, thorough and universal medical supervision, more manual instruction activities, an elimination of home work below the high school, and a rigid limitation of it to one or two hours thereafter, a substitution of freedom for the atmosphere of repression, the school will continue to mingle evil with the good it accomplishes.

The book should be read by teachers of all grades, but they should note some of the references to facilities in Great Britain are not quite up to date, as nothing later than 1913 is quoted, and from the preface it would seem this was the date at which the work was written.

SCIENCE AND ETHICS.

Ethics: An Exposition of Principles. By ARTHUR LYNCH. (7s. 6d. net. Cassell.)

Mr. Lynch has convinced himself that he has invented an entirely fresh system of psychology and ethics, and in order to encourage the confidence of his readers he calls it the Aletheian system, from the Greek word for truth. It cannot be fully understood without reference to the author's psychological works, only one of which has as yet appeared.

The reader is brought up constantly by a reference to the "forthcoming" "Principles of Psychology." There is a good deal to be said for an occasional excursus into the open sea of some of our wider philosophical subjects without reference to the work of any preceding explorer. But in that case it is better to leave one's predecessors alone. To be continually yapping at them while pursuing our own course is distracting, and not very helpful. Mr. Lynch has "heard professors of great reputation talk almost inconceivable nonsense on the very subjects which they professed," so he is perhaps entitled to give up "the academical or empirical" method. But why not drop the whole of the first part of the book, and start straightaway with the real problem of scientific ethics on the basis of truth, energy, and sympathy? The actual working out of the thesis is most interesting. The readers get all manner of unexpected side-lights on truth, and feel that they are in the hands of a man of great freshness and originality, even if they cannot accept his estimates of previous writers. Religious people will be sorry that their approach to the question is not sound, but glad that science on the whole comes to the same conclusion as religion, and will be willing to accept with gratitude the immortality of the soul even if presented by those whom they have been inclined to regard with suspicion. The theories of government are striking, as is only natural when we get an Irish M.P. writing on the subject. We cordially agree that "Governments may be made far more efficient than at present."

CLASSICS.

The Clarendon Series of Latin and Greek Authors: *The Clouds of Aristophanes.* Partly in the Original and partly in Translation. With Notes and an Introduction by CYRIL BAILEY. (3s. 6d. net. Clarendon Press.)

The introduction to this volume is distinctly good; the sections entitled "Athens and the New Spirit" and "Dramatic Performances at Athens" are just what a boy needs to make his reading intelligible to him, but classroom experience alone can decide whether the "experiment" (frankly admitted in the preface) of giving only one-third of a play in Greek and the rest in English, is a justifiable one or not. To a scholar the effect is bizarre in the extreme, but our schoolboys are not "scholars," and we must wait patiently for the verdict of practical schoolmasters upon the whole series—both Latin and Greek authors—to which this volume belongs.

The Odyssey of Homer. Done into English Prose by Prof. S. H. BUTCHER and Dr. A. LANG. School Edition. (4s. Macmillan.)

A "school edition" in limp covers needs some justification, and old-fashioned schoolmasters will be aghast at this official providing of "cribs," but the recently published report of the Prime Minister's Committee on the Teaching of Classics advocated the use of translations, where study of the originals is impossible, and all will agree that if boys are to be given translations they should be given the best, and this is undoubtedly the best translation of Homer into English.

The Year's Work in Classical Studies, 1920. Edited for the Council of the Classical Association by W. H. S. JONES. (3s. 6d. net. Arrowsmith.)

There are some commendable innovations in this excellent annual. The articles—especially those on Greek and Latin literature by Prof. Dobson—have been written in a way which makes an appeal to the general cultured reader, and not only to the classical specialist, and the different writers have not always confined themselves to reviewing the work done in their subjects in the previous year only. "Roman Law," for example, covers the years 1918-1920, and "Greek and Roman Religion" 1915-1920. The editor, Mr. W. H. S. Jones, deserves congratulation upon the innovations, both of which serve to make an estimable, but in past years often rather jejune, annual more than usually readable.

PSYCHOLOGY AND PHILOSOPHY.

Dreams and the Unconscious. By Prof. C. W. VALENTINE. (4s. 6d. net. Christophers.)

This little book conveys an unmistakable impression of reserve knowledge and power. It certainly justifies its subtitle "An Introduction to the Study of Psycho-Analysis,"

(Continued on page 232.)

SECOND SERIES OF POEMS OF TO-DAY

Compiled by the ENGLISH ASSOCIATION. Uniform in style of issue and price with the First Series (see below). Includes poems written since the publication of the First Series, together with certain poems which it was not possible to include in the former volume. Contains 135 poems by 72 authors. (In April.)

POEMS OF TO-DAY : First Series.

Compiled by the ENGLISH ASSOCIATION. Cloth, with Biographical Notes, 3s. 6d. net; Stiff Paper Covers, without Notes, 2s. net. 23rd Impression: 141st-150th Thousand.

THE DAFFODIL POETRY BOOK.

For junior classes. Compiled by ETHEL L. FOWLER, B.A. Cloth, 3s. 6d. net. Strong "duccen" boards, 2s. 6d. net. In two Parts, stiff covers, 1s. net each. 4th Impression: 16th-19th Thousand.

*By far the cheapest and most popular
of Anthologies of Modern Poetry.*

but it might be almost as justly named a brief statement of the present position of the subject. No better guide could be put in the hands of one who has read much but vaguely in the matter. Prof. Valentine is critical as well as expository, and he is very happy in the side-lights he throws from his own experience. Several of his longish notes at the ends of chapters are very valuable. Probably he is wise in neglecting the much discussed distinction between *suppression* and *repression*. In any case, his pages are the brighter for the limitation to the one term *repression*. The wholesome side of repression is emphasized in a way that will commend itself to practical teachers, and due attention is given to the recent tendency to rehabilitate the old plan of fighting out disagreeable situations rather than *unwillingly* (it is a pity Prof. Valentine has not accepted this useful term from Dr. Rivers) seeking relief in repression. A remarkably able and an attractively concise statement of what is best in Psycho-Analysis.

"The International Psycho-Analytical Library": No. 37.—*The Psycho-Analytic Study of the Family*. By J. C. FLÜGEL. (10s. 6d. net. International Psycho-Analytical Press.)

Mr. Flügel is very modest in his preface. He calls his book a "work of compilation," and tells us that we will find "little that is original" in its pages. This is hardly fair, and it would be unjust to take Mr. Flügel's work at his own estimate. To begin with, there are certain definite contributions to the subject in the later chapters that are of value. But above all the clear presentation of such a mass of relevant matter from all manner of disparate sources is a contribution of itself. Nowhere else is the same material available in such a convenient form. What specially interests the readers of this Journal is the educational application. This is immanent throughout, but is deliberately made at certain points, particularly in Chapter XIX where an excellent account is given of the practical ways in which the child can be successfully weaned from over-reliance upon family supports. The educator, however, cannot read any part of the book that does not offer material for consideration from his special standpoint. In reading these pages one cannot get rid of the notion that one is living in the realm of the abnormal, yet this feeling is continually being disturbed by the possibility that after all a good deal of what is described is too common in real life. We are not, however, always in the cesspool in these pages, and some of the problems presented are not only of great interest, but of great importance. The treatment of "alternation of generations" in Chapter VII deserves very careful consideration by all educators and social reformers. The book is a very handsome one, but surely psychologists should know better than to allow the length of line adopted. The marginal heads, however, to some extent make up for the unwholesome span of the lines.

What Philosophy Is. By Dr. W. T. JONES. (2s. 6d. net. Williams & Norgate.)

Post-graduate students of education often come to their subject in blank ignorance of any form of philosophy, and their teachers are sometimes at a loss to suggest any one book that will meet their immediate needs. The present volume is written deliberately "for the uninitiated in Philosophy," and may be safely recommended as a sort of First-Aid. It must be admitted, however, that a book of this size cannot by any possibility meet the case. As a matter of fact it takes a man who is familiar with the subject to see how skillfully the matter is here presented, and the chances are that the student who begins with this book, will think much more of it when he re-reads it after having read some of the substantive books in Philosophy. Dr. Jones, however, has done his work as well as circumstances permit, and he may well justify himself by the consideration that true philosophy is in a constant state of flux, and that by the time his readers have worked their way into the heart of their subject, they will be able to cover with decent muscle and connective tissue the bare but well articulated skeleton he has presented.

ENGLISH.

English Romantic Poets: *Selections from the Poems of Sir Walter Scott*. Edited by A. H. THOMPSON. (4s. 6d. net. Cambridge University Press.)

This volume is the last of the Cambridge series of "English Romantic Poets," and contains a number of characteristic passages from "The Lay of the Last Minstrel," "Marmion," "The Lady of the Lake," "Rokeby," "The Bridal of Triermain," and "The Lord of the Isles," as well as a selection of the shorter poems. To aid the reader to a full appreciation of the poet's work, summaries of the longer poems are given.

In addition to a full and sympathetic introduction, the volume is enriched by copious notes and a full index of these notes. As in the earlier volumes of this series, the book is well bound and printed.

Poems and Prose Pieces (Illustrated). By Boys in the Lower Forms of Hymers College. (2s. Brown.)

It is becoming quite the fashion to publish little volumes of verse by schoolchildren. Whether such publication is desirable in the moral interests of the young authors is a moot point, but undoubtedly these youthful efforts show how much poetic faculty there is in boys and girls, and give encouragement to those who are trying to elicit it. This little collection contains fourteen poems, seven prose pieces, three bits of music, and three drawings. Four of the poems are communal pieces, that is, pieces licked into shape by the general effort and criticism of the class. All the young authors, none of whom is over fourteen years of age, have a turn for writing verses. The prose piece, "The City of Heroes," is a genuine work of imagination.

A Dictionary of English Phrases. By A. M. HYAMSON. (12s. 6d. net. Routledge.)

This is a veritable *omnium gatherum* of some 14,000 phrases (Latin, French, and English), colloquial and slang expressions, catchwords, and much else of which the "gentle reader" may need an explanation. The author seems up to date; we have found *stunt*, *hyphenated American*, *Sinn Fein*, *Pussyfoot*, *camouflage*, and other recent acquisitions. The explanations are brief and to the point, but admirers of Mr. Winston Churchill will be pained to see "terminological inexactitude" defined as "a euphemism for a falsehood."

(1) *The Kingsway Series of Composition Books*. By R. FINCH. Book III. (9d. net. Evans.) (2) *Perse Playbooks*, No. VI—*Homework and Hobby Horses*. Edited by H. CALDWELL COOK. (3s. 6d. net. Batsford.) (3) *Children of Other Times*. Edited by Herbert Hayens. Third Book. (2s. Collins.)

(1) Book III is not behind the former two of the series in the amount of well-planned work it offers in small compass. The two chapters on verse-writing, with the example given of a fable in ballad form by a child of twelve, are specially useful.

(2) The editor of this booklet has made the happy discovery that "nearly all boys under thirteen can write short lyrics without taking very great pains." The selection given from the boys' work contains many delightful examples, notably the quaintly humorous "Foolish Frog," the "Epitaph," and "Soldiers, Whither Away?" Such work must have been a joy to the children, and the reading of it may demonstrate to faint-hearted teachers, chary of giving up precious time to verse-composition, what a real help to self-expression such exercises may become.

(3) Though this little book lays itself open to the charge of "scrappiness," most of the tales are bright and attractive, and, by their very variety and miscellaneousness, they may help the modern child to escape the common reproach of a lack of general knowledge.

Collins' "New World" Script Writing. Books I, II, and III. (2½d. each.)

Simplicity of outline, which is apparently the main aim of this set of copy-books, is entirely laudable; but, notwithstanding the assurance of experimenters to the contrary, it is impossible to imagine that there is no time lost in raising the pen after every letter. The space between words is so small that the Script is not as easy to read as it should be. The outward sloping curves of the last limb of m, n, h, p are ugly, being at variance with the general uprightness. There is an unfinished look about the tail of the small g, while capital G and C are likely to be confounded. The simple ornament at the foot of each page is a new feature likely to please the small writer.

Manchester University Roll of Service. (10s. net. Longmans, Green.)

This work of compilation has been carried through with the greatest accuracy, and is issued in a form that is worthy of such a memorial. Sir Henry Miers contributes a few dignified words by way of preface. But as a record the service rendered to the country in her hour of need by Manchester University, it is incomplete. It gives us the particulars of all who served in Army or Navy, but it has no place for those who served as non-combatants—for the Professor who organized the Education of the Salonika force, for the student who, being rejected by the Army, enlisted for work with the Y.M.C.A., and went down

By **MARIE C. STOPES, D.Sc., Ph.D.**

3s. 6d. net (by post, 3s. 10d.).

"Her book was inevitable; and it is most fortunate that the task of writing it has fallen to one who is so fearless and sure of the right as to avoid insincerity and claptrap, and so minded as to avoid pruriency and false shame."—Sir ARCHDALL REID in *Eugenics Review*.

Radiant Motherhood.

A Book for Those Who are Creating the Future.

By **MARIE C. STOPES, D.Sc., Ph.D.**

6s. net (by post, 6s. 6d.).

"Luminous with that sense of dignity which Dr. Stopes brings to matters which were shameful secrets to our forefathers. I do not often share publishers' ecstasies, but I think Messrs. Putnam have the root of the matter in them when they say that an intelligent study of Dr. Stopes's works (and a practical application of their teachings) would see the human race transformed in a few decades. Where else is there hope for a sick and weary world but in the nurseries? A book for those who are creating the future," says Dr. Stopes. A true word."—*Daily Express*.

AT ALL BOOKSELLERS.

24 BEDFORD ST., STRAND, LONDON, W.C. 2.

with dysentery in far Tiflis, for a graduate who in obedience to his conscience, joined the Friends' Ambulance and served at his own charges, for the girl graduates in medicine who volunteered for hospital work at the front, and took risks far greater than many doctors of the R.A.M.C. whose names find honourable mention in this record, for the nurses who on the torpedoed hospital ship said "Fighting men first." If there is one fact which emerges clearly from the experience of the recent war, it is that no sure line can be drawn between the civilian and the soldier. What the historian of the future will ask for will be a complete record of all the activities undertaken in connexion with the University to help the country. The girls who picked strawberries for the soldiers' jam must have their niche too. Prof. H. W. C. Davis, with the help of a committee, is compiling a complete record of what Manchester did in the war to be stored in the archives of the city. This volume will find a place in it. But alongside it must stand another volume, which still remains to be compiled, and this other will embody all that was done by organized members of the University, female as well as male, old as well as young, in a civilian capacity.

HISTORY.

"Cambridge Historical Series."—*History of Holland*. By Dr. G. EDMUNDSON. (22s. 6d. net. Cambridge University Press.)

The present volume is the twenty-third member of that somewhat unsystematic and varied collection, the "Cambridge Historical Series." Its writer is well known as the highest living English authority upon the affairs of the Netherlands. His chapters in the "Cambridge Modern History," and his contribution to the *Transactions of the Royal Historical Society*, showed that he had a profound acquaintance with the language, literature, and records of the people of the Low Countries. The "History of Holland" now before us treats of all the seven provinces of the United Netherlands, but Dr. Edmundson defends his title on the ground of the unquestionable dominance of Holland over the other six. The plan of the series (which the late Dr. Cunningham was allowed to violate with impunity) is urged as an explanation of the omission of any detailed treatment of the mediaeval history of the region in question. Dr. Edmundson's story begins with the fifteenth century concentration of the bulk of the Netherlands in the hands of the Burgundian dukes, and it is continued to the present day. It contains many episodes of absorbing interest, and it is told in a style of admirable lucidity and dignity. The pioneer activities of the Dutch in the seventeenth century were memorable and of world-wide importance.

Outlines of Modern History. By J. D. ROGERS. (4s. net. Clarendon Press.)

Mr. Rogers has written a useful introductory sketch of the history of Europe and its Colonies during the past four hundred years. It is prefaced by a rapid survey of the preceding period from the founding of Rome to the discovery of America. Thus the reader who comes without antecedent knowledge of the general course of world-history is enabled to pick up the thread of events, and to realize where he is when the more detailed narrative begins. One distinctive feature of the book is the prominence given to Britain and its Empire. This feature will commend the book to teachers whose pupils are already well-grounded in English history; for it will enable them with ease and confidence to lead their class on to the new and less familiar ground of Continental history. The volume is illustrated by means of forty-three maps and pictures. It concludes with an index of no less than eighteen three-columned pages, remarkable for its fulness and lucidity.

KENT EDUCATION COMMITTEE.

FOLKESTONE SUMMER SCHOOL FOR TEACHERS,

Aug. 5th to Sept. 2nd, 1922.

Principal — Mr. H. TUNALEY
(formerly Chief Art Inspector in Elementary Schools
and Training Colleges, Board of Education).

A General Lecture Course on "Modern Methods
in Education" will be given by the Principal.

SPECIAL COURSES.

1. Methods of practical instruction throughout the school curriculum—(a) for young children, (b) for older pupils.
2. General Art and Crafts Course.
3. Specialized Handicraft in Wood, Metal, Constructive and Decorative Needlework, &c.
4. Physical Training and Organized Games.
5. Eurhythmics, Singing, and Musical Appreciation.

Special Lectures and Demonstrations (open to all students) will be given by well-known authorities on Dramatization in connexion with the teaching of English, on Village Music, and on other subjects, connected with the courses.

Full particulars as to fees, accommodation, &c., may be obtained from Mr. C. A. B. GARRETT, Technical Institute, Folkestone, who will also supply forms of application for admission.

E. SALTER DAVIES,
Director of Education.

THE STUDY OF WORLD HISTORY,

By Mr. OSCAR BROWNING, appeared in November and December, 1920. The two numbers, post free, for 3/-

OXFORD UNIVERSITY.

VACATION COURSE IN EDUCATION.

(Preliminary Notice.)

A VACATION COURSE in EDUCATION will be held in August, 1922. It is open to both men and women, and is not confined to members of the University.

Graduate teachers of seven years' standing may obtain the University Diploma without further residence.

Apply to THE DIRECTOR OF TRAINING, 15 Norham Gardens, Oxford.

DALCROZE EURHYTHMICS.—

A VACATION COURSE will be held in London, APRIL, 17th to 22nd inclusive, comprising (a) Daily Lessons in Rhythmic Movement, (b) Daily Lessons in Solfege (ear-training), Improvisation, and two Lectures on "Fundamentals of Music and Rhythm" by Mr. Ernest Read, A.R.A.M. (Professor of Aural Training and Improvisation at the R.A.M.). Inquiries and applications for prospectuses should be addressed to THE DALCROZE SCHOOL OF EURHYTHMICS, LIMITED, 23 Store Street, London, W.C. 1.

HOLIDAY LECTURES to Teachers

and Choir Trainers.—Mr. James Bates will give a course of Lecture-Lessons on the teaching of voice-production, enunciation, and singing to children, on Tuesday to Saturday, April 18-22, from 11.30-1 o'clock, at 22 Prince's Street, Cavendish Square, London, W. 1. The fee for the course will be one guinea inclusive. For full particulars, address 6 Blomfield Crescent, London, W. 2.

UNIVERSITY OF LONDON

THE FIFTEENTH HOLIDAY COURSE FOR FOREIGNERS, arranged by the Board for the Extension of University Teaching, will be held at Bedford College from July 21—August 17.

A limited number of English teachers desirous of studying

ENGLISH PHONETICS

will be admitted to this Course. They will be free to attend all the Lectures (those on Phonetics will be delivered by Mr. Ripman) and any of the Phonetic Classes, of which there are 14 daily, conducted by seven experienced teachers. This affords an exceptional opportunity of observing the practical application of Phonetic Theory.

For further particulars apply to THE REGISTRAR, University Extension Board, University of London, S.W. 7.

Early application is advisable.

THE Prize for the March Competition is awarded to "Pluche," and the second place to "Mondham."

The winner of the February Competition is Mr. G. H. Hammond, 54 Cardigan Road, Headingley, Leeds.

EXTRACT FROM MME. DE SÉVIGNÉ'S LETTERS.

By "PLUCHE."

I am inditing this letter to you, my dear Count, to make known to you one of the most grievous losses that could befall in France—that of M. de Turenne, at which I feel sure you will be no whit less concerned and grieved than we are here. The tidings reached Versailles on Monday. The king was as distressed as none could fail to be at the death of that great commander, the finest gentleman in the world: all the court was in tears and M. de Condom was like to have fainted. All were on the point of setting off to make merry at Fontainebleau: everything was cancelled. Never was man so sincerely regretted. All the district where he lived, and all Paris, and the entire populace were thrown into the most painful commotion. Noisy groups gathered everywhere to lament their hero. I am sending you a trustworthy account of what he did a few days before his death: if to three months of quite marvellous generalship, which those of the profession cannot find words to praise, you add the last

day of his glory and his life, you then know all. He had the pleasure of seeing the army of the enemy in retreat before him; and on the 27th, which was a Saturday, he ascended a slight elevation to observe their march. His intention was to fall upon their rear, and he informed the king at noon that with this design he had sent a message to Brissac to enjoin prayer for forty hours. He reported the death of the young d'Hocquincourt, and promised to send a courier to apprise His Majesty of the results of his enterprise. This letter he sealed and dispatched at two o'clock. He made his way to the top of this little hill accompanied by eight or ten persons; an unlucky cannon shot, fired at random from a distance, cut him in two—and you can imagine the cries and tears of that army. The courier had started on the instant, and arrived on Monday, as I told you: so that within an hour of each other the king received a letter from M. de Turenne, reporting that the two armies were in close touch with each other; and another to announce that M. de Lorges has assumed his uncle's command and that the violent grief of the army is without parallel.

We classify the 155 versions as follows:—

Class I.—(a) Pluche, Mondham, Fitzalan, S.F.X., Outis, X.Y.Z., Quill, Whiteknights, Brook Green, Bésigne, Ladon, Mario, Traditore, Dane, Emile, Gobelins.

(b) L.A.C., Cadwal, Torelore, Esse quam videri, Angela, Sirach, Traddles, St. Benoît, Devonian, Moosh, J.H.B., Ne m'oubliez pas, N.B.W., Ap-Ithell, S.H.G., Dupont, Puck, J.P., Armada, Back number, Loo, Leander, M.V., Woodlea, A.B.F.W., Caractacus, V.D.C., Nibbidan, Boy.

Class II.—(a) C.E.B., Shawn Spadah, G.E.P., Lesba, Penguin, Summerleigh, D.F.H., Columcilla, Moppitt, Elsinore, Q.E.F., Prince Ronald, E.L.E., Bug, Bege, Gama, Blick, Mascot, F.A.C., Mirabelle, E.W.J., Treize, C.M., Endvmion, Rochester, A.M.E.C., Mike, Chingleput, Narcisse, B.M.K., L'Espoir, T.C.J., Ilex, F.W.M., Will o' the Wisp, C.M.W., Twee, S.H.C., Noman, E.D.G., Adrienne, E.B.H., Yelush.

(b) W.G., Devon, L.M.B., Peseur, S.T.B., Trèfle, H.Cl., Nabuchodonosor, Hibernia, P.M.J.A., Johnny, J.S.H., Jo-Anne, R.H.A., Suze, C.R.C., Xapegata, Espérance (Oxford), Melios, Deux Sous, Inscitia, Espérance (Highbury), Andax, Bobbiè, Loyalty, Brer Rabbit

Class III.—Nobody, E.R.W., La Petite, A.E.D., Captain Hook, Endeavour, Little Tich, Dhudha, S.J., Winkle, M.C., Marjorie, D.C.H., Teragram, B.I.G., Glossop, C.S.C., Ariel, A.M.B., Francine, G.G., Aphrodite, Jack, Espérance (Leigh), D.H.

Class IV.—I.V.J., Columba, M.K.R., Ivan, L.V., Marie Louise, E.S.A., Dorothea, J.W., Carlyle, So So, Dickie, Poor Tom, Jane Grey, Frank.

It was unfortunate that in arranging the March Competition we did what we have very rarely done, namely, selected a passage from a book of extracts. The editor of the book had apparently used a corrupt version of Mme. de Sévigné's letters; in the standard edition the last sentence runs, *de sorte qu'à une heure l'une de l'autre, le roi eut une lettre de M. de Turenne et la nouvelle de sa mort. Il est arrivé depuis un gentilhomme de M. de Turenne, qui dit. . .* Of another sentence a better reading is *C'est après trois mois . . . qu'arrive le dernier jour.* Collection of unseens are evidently not to be relied upon. *Prières de quarante heures* is thus explained by Littré, "prières faites dans les grands calamités et pendant le jubilé et durant lesquelles le saint sacrement est exposé." On this occasion it was a time of crisis rather than calamity. *Le plus honnête homme* surely has its moral meaning here, "the most virtuous man in the world." *Tout le peuple* cannot mean "the whole nation," as many translated it, about which Mme. de Sévigné was not in a position to make any statement. An astonishing number of candidates rendered *décamp* by "decamp," showing ignorance of both French and English. "Apprize . . . enterprise" in the winning version is rather cacophonous. The peculiar difficulty of translation was curiously shown by the fact that the most testing sentence in the piece was the extremely simple one, *on tire de loin . . . corps.* The number of renderings of this that read like English was remarkably small.

A Prize of Two Guineas is offered for the best translation of the following extract from "L'Appel au Soldat," by Maurice Barrès.

Le long de la vallée mosellane, très large ici et importante par ses hauts-fourneaux, une route rougeâtre, bordée de poiriers

French Courses

AT

CAEN (Normandy)

from JULY 4th to AUGUST 30th.

"The popular French Courses at Caen, the first of the kind to be established in France, are still the best and most practical."

For full information, apply to

Prof. E. LEBONNOIS, 16 Avenue de Creully, Caen.

et de pommiers alternés, mena les voyageurs jusqu'à Thionville, guerrière encore et corsetée si étroitement dans sa ceinture de murailles que d'un même point de sa petite place centrale on voit ses trois portes militaires et qu'un seul clairon est facilement entendu de tous les habitants dressés à en comprendre les sonneries.

* * * * *

Il est fâcheux que les romantiques qui nous dirent avec des expressions saisissantes le grand secret de mélancolie des bois, de la mer et des prairies du centre aient ignoré les petites villes militaires de l'Est et leur atmosphère propre à former les âmes : le son du clairon, tout le jour, le drapeau, le général, les promenades sur le rempart et chaque soir soudain le fracas militaire de la retraite éclatant en apothéose. Ah ! les magnifiques tambours se déchainant à huit heures sur un geste bref de la grande canne et s'engouffrant dans les rues avec toute la population derrière ! Cette discipline théâtrale et monotone pénétrait, pour en faire des héros et des amateurs de mort glorieuse, les jeunes garçons des places à la Vauban. Il y a là un état d'âme français qui disparaît sans avoir reçu son expression littéraire.

Les fortifications de Thionville ne sont plus que des promenades agréablement plantées de chênes et aménagées en kiosques, en petites terrasses surélevées. 1870 a transformé les paysages de la Lorraine aussi bien que ses mœurs. Dès l'instant que la population perdait contact avec le soldat, prussien et qui, d'ailleurs, évolue dans ses forts fermés à la curiosité publique, c'était la fin de ces laboratoires d'esprit militaire. Pourtant ils ont fourni des officiers d'un même type hautement honorable, dédaigneux du panache, réalistes et moraux, en si grand nombre que cette discipline semble devoir survivre aux conditions qui la produisaient ; elle demeurera une des pierres de la construction française quand les carrières lorraines d'où on l'extrait auront totalement disparu sous les remblais allemands.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on April 13, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

FREE PUBLIC LECTURES.

[Under this heading a list of free public lectures of especial interest to teachers will be published month by month. The figure in parentheses indicates the number of a lecture if it is one of a series. Titles of lectures for possible insertion in this list should be received at the Journal Office not later than the middle of the month preceding that in which the lecture is to be delivered.]

APRIL 1.

L.C.C. (at Polytechnic, Regent Street, W.), at 10.30.—Prof. H. E. Armstrong: The Wonders and Problems of Food.
L.C.C. (at Horniman Museum, Forest Hill, S.E.), at 3.30.—Dr. W. A. Cunningham: Woman's Sphere in Savage Africa.

APRIL 5.

SCHOOL OF ORIENTAL STUDIES, at 12.—Miss Alice Werner: Bantu Mythology and Folk Lore (6).

APRIL 6.

CIVIC EDUCATION LEAGUE (Lepay House, Belgrave Road, S.W.1), at 8.15.—Discussion on Occupational Education. Opening Paper by Miss M. M. Barker.

Applications from intending purchasers are solicited for the following properties :

STAFFORDSHIRE.—For Disposal. Boarding and Day School for Girls. There are about 35 pupils in all. Average gross receipts for 3 years, about £1,000 per annum. Average profits about £200 a year. Vendor states that two sisters could run the School much more economically than she has been able to do. Vendor has had the School 12 years, and now wishes to sell as her health will not permit her to continue teaching and looking after Boarders. Price for goodwill and furniture to be arranged.—No. 7,291.

HOME COUNTY.—Old-established and most successful Private School for Girls. The School is for sale owing to the health of the Principal. 41 Boarders this term and 11 Day Pupils. Fees as per prospectus, 20 guineas a term for Boarders, without extras. Gross receipts about £2,700 per annum. Rent £150. The School has a very good record at Public Examinations. Price goodwill to be arranged.—No. 7,290.

SUSSEX (Seaside).—A client having a Boarding and Day School for Girls is anxious to dispose of same. The School has been established over 50 years. We are not certain as to the present number of Boarders, but believe there are about 15 to 20 at 30 guineas a term, and a few Day Pupils paying 3 to 7 guineas a term. The lease of the present house expires shortly, but our client states that she has the offer of another on the sea front at a rental of £150 per annum. Price asked for goodwill about £450, the furniture to be taken at valuation.—No. 7,317.

ESSEX (Seaside).—Girls' Boarding and Day School. Established and conducted by the vendor 17 years. Gross receipts past year about £2,500. Net profits past year about £700. Number of Boarders 20, paying up to 60 guineas, and 25 Day Pupils paying from 45 guineas a year without extras. Rent of detached house, near sea front, containing 10 bedrooms, 2 schoolrooms, large recreation room, dining and drawing-rooms, and usual offices, electric light, £150; or the vendor would let for say 3 years at a rental of £125, tenant doing all repairs. Price for goodwill about £800, school furniture at valuation. Vendor might accept a capitation fee for all Pupils transferred.—No. 7,292.

SUSSEX.—Transfer or Partnership in old-established Boarding and Day School for Girls. Gross receipts about £3,000. Number of Boarders 39, paying about £60 per annum. Number of Day Pupils 31, fees up to 7½ guineas a term. Rent of good house, facing the sea, £105. Price for goodwill by arrangement. Furniture at valuation. Terms of partnership to be arranged.—No. 7,295.

SCOTLAND.—Girls' Boarding and Day School (with little boys in Kindergarten). Established 50 years, and conducted by vendor 20 years. Gross receipts past year, £4,645; average gross receipts past 3 years, £3,750. Net profits, about £800. Number of Boarders 25, paying £120 to £140 per annum, and about 50 to 60 Day Pupils, paying from £25 to £40 per annum. Rent of large house, held on lease, which expires in May next, only £79. The vendors would accept one term's

fees by way of goodwill. School furniture, and some household furniture, at valuation.—No. 7,294.

EAST YORKS (Seaside).—Girls' Boarding and Day School. Established 25 years and conducted by vendor 6 years. Gross receipts for past year, £1,735; average of 3 years, £1,700. Net profits past year, £400; average of 3 years, about the same. There are 28 Boarders, paying £20 a term, and 46 Day Pupils at £2 a term. Rent of house (an old Jacobean Hall), containing drawing-room, dining-room, 10 bedrooms, 3 classrooms, &c., about £78. Yearly tenancy. Grounds of about 3 acres, including 3 lawns. Price for goodwill, school, and household furniture, about £750. Telephone : Gerrard 7021.

Posts Vacant.

POSTS ABROAD.

LADY TEACHERS are earnestly advised to consult the Continental Secretary of the Girls' Friendly Society, 14 & 16 Holbein Place, Sloane Square, London, S.W.1, before accepting any post abroad. Apply by letter, enclosing stamped addressed envelope. A small charge is made for verification.

SCHOLASTIC, CLERICAL, AND MEDICAL ASSOCIATION, LTD.

THE above Association is in a position to offer to well qualified ladies and gentlemen several first-rate scholastic appointments in all parts of the country. Candidates should write with full particulars as to age, qualifications, experience, &c., &c., to GENERAL MANAGER, 12 Stratford Place, Oxford Street, W.1. No charge for registration.

PROFESSORSHIPS.

REQUIRED. — PROFESSOR OF MATHEMATICS in the UNIVERSITY COLLEGE, COLOMBO, CEYLON. Candidates should be graduates in first-class honours in a British University. The selected candidate will be required to organize the Mathematical Courses and teaching both on the Science and Arts sides at the University College. He will himself take a considerable portion of the teaching, though in all probability he will have two lecturers to assist him. He should have considerable organizing ability and be a capable disciplinarian. Salary during three years' probation, £800 per annum with a temporary increase of £100 pending general revision of salaries. If the appointment is confirmed after three years, salary will be £850 rising by annual increments of £50 to £1,000 per annum. Colombo station allowance is given at the rate of 11% of substantive salary for a married officer, and 7½% for a single officer not living in Government quarters.

After confirmation 4% of salary is deducted as contribution to Widows' and Orphans' Pensions. Free passage to Ceylon provided for the officer and his wife and family not exceeding four persons.

Applications should be made in writing to the ASSISTANT PRIVATE SECRETARY (APPOINTMENTS), Colonial Office, Whitehall, London, S.W. 1.

UNIVERSITY OF DUBLIN. TRINITY COLLEGE.

On Wednesday, May 10, the Council will nominate a whole-time PROFESSOR OF EDUCATION at a salary of £500 a year, rising by annual increments of £25 to £600, for a period of five years from July 1, 1922, the Professor to be eligible for re-election if the post is continued. Candidates are to send applications, stating fully their qualifications, before April 23, to the REGISTRAR, Trinity College, Dublin, who will supply all further information required.

HEADSHIPS.

DENBIGHSHIRE EDUCATION AUTHORITY.

RUABON COUNTY SECONDARY SCHOOL FOR GIRLS.

Applications are hereby invited for the post of HEAD MISTRESS of the above school, duties to commence in September, 1922.

Salary £500, rising by annual increments of £25, to £650.

LONDON HOSPITAL MEDICAL COLLEGE AND DENTAL SCHOOL.

THE Medical College and Dental School of the London Hospital are fully equipped to meet modern requirements. The various departments are under the direct control of University Professors and Lecturers, who devote their time entirely to work in their Department and who are assisted by a number of Demonstrators. The HOSPITAL contains 950 beds and is the largest General Hospital in England. Its position in the neighbourhood of the extensive docks, factories, and workshops of the East of London renders it for accidents one of the largest Hospitals in the World. The Wards, Out-patient, and Special Departments present a wide field for clinical instruction and afford exceptional opportunities for acquiring an extensive and practical knowledge of all phases of disease.

SCHOLARSHIPS AND PRIZES. Entrance Scholarships are offered in Science. An Entrance Scholarship is also offered in Anatomy and Physiology to students of the Universities of Oxford and Cambridge. Numerous Prizes are awarded in all subjects of the curricula.

FEES. MEDICAL COURSE. An Entrance Fee of 20 Guineas and an inclusive Annual Fee of 40 Guineas.

DENTAL COURSE. Four years' Course, a Fee of 200 Guineas; two years' Course, 100 Guineas; payable in equal annual instalments.

RESIDENT APPOINTMENTS are more numerous than at any other Hospital in the Kingdom.

RESEARCH FUNDS of over £26,000 give unrivalled facilities for Medical Research.

ATHLETICS, RESIDENCE, &c. A Clubs' Union with an Athletic Ground of thirteen acres, Students' Hostel on Hospital Grounds, College Dining Hall, &c.

(MEN STUDENTS ONLY ARE ELIGIBLE FOR ADMISSION.)

A Prospectus giving full particulars may be obtained from the Dean:

PROFESSOR WILLIAM WRIGHT, M.B., D.Sc., F.R.C.S., MILE END, E. 1.

ASSISTANT MISTRESSES AND GOVERNESSES.

Messrs. GABBITAS, THRING & CO.,

GABBITAS & THRING, stating their age, qualifications, and experience, and enclosing copies of their Testimonials. A Prospectus will be forwarded gratis on application. **NO CHARGE FOR REGISTRATION**, and no

Fee of any kind is due unless an Appointment be obtained through the Agency.

SCHOOL TRANSFERS AND PARTNERSHIPS.

Messrs. GABBITAS, THRING & CO. have a large number of **BOYS' and GIRLS' SCHOOLS** on the books in their Transfer Department. On learning a Purchaser's qualifications and requirements, they will send notices of opportunities likely to prove suitable, without making any charge to Purchasers.

LADIES with University or other teaching qualifications, and teachers of special subjects seeking appointments in Public or Private Schools, at home or abroad, for the Summer or Autumn Terms, should at once register with

Truman & Knightley

SCHOLASTIC AGENTS LTD

who will be pleased to give their requirements careful and personal attention.

THERE IS NO CHARGE FOR REGISTRATION OR MEMBERSHIP.

The terms to those securing engagements through this agency are:—

On accepting the engagement	10s.
At the end of the first term of such engagement	2½%
On the first year's salary, with an additional fee of £1 if the post be resident.	

Special terms for temporary engagements.

These fees are reckoned on the lowest possible basis consistent with efficient service, and compare very favourably with those charged by any other agency.

The following are selected from a number of **Summer and Autumn Term Vacancies**, for which Messrs. TRUMAN & KNIGHTLEY have been instructed to put forward candidates:—

BLACKIE & SON'S NEW LIST

SCIENCE.

APPLIED CALCULUS. By F. F. P. BISACRE, O.B.E., M.A., B.Sc., A.M.Inst.C.E. Large crown 8vo. xvi + 446 pp., with Answers, including 106 figures, and 17 half-tone portraits of celebrated mathematicians and physicists. Price 10s. 6d. net.

This book has been specially written for science and engineering students who desire to acquire a working knowledge of the calculus but whose preliminary mathematical equipment is slight.

PLANE GEOMETRY. An Account of the more Elementary Properties of the Conic Sections, treated by the Methods of Co-ordinate Geometry, and of Modern Projective Geometry, with Applications to Practical Drawing. By L. B. BENNY, M.A. (Cantab.), B.A. (Lond.), F.R.A.S., sometime Mathematical Scholar of Christ College, Cambridge; Head of the Mathematical Department of University College, Exeter. Large crown 8vo. viii + 336 pp., with Answers, 145 figures, and 5 half-tone portraits of celebrated mathematicians. Price 12s. 6d. net.

This book covers completely the course in Geometry for the B.Sc. Pass Examination of London University in Pure Mathematics.

APPLIED GEOGRAPHY. By ALEXANDER STEVENS, M.A., B.Sc., Lecturer in Geography, Glasgow University. Crown 8vo. Price 6s. net.

For those who propose to enter the professions of the sea, surveying, engineering, prospecting, &c.

AN ELEMENTARY TEXT-BOOK OF COAL MINING. By ROBERT PEEL. *New Edition*, revised and enlarged by DANIEL BURNS, M.Inst.M.E., Professor of Mining, Royal Technical College, Glasgow. Crown 8vo. Price 6s. net.

FUEL AND REFRACTORY MATERIALS. By A. HUMBOLDT SEXTON, F.I.C., F.C.S., Past President of the West of Scotland Iron and Steel Institute, &c. *New Edition*, completely revised and enlarged by W. B. DAVIDSON, D.Sc., Ph.D., F.I.C. Large demy 8vo. viii + 382 pp., with 111 figures. Price 12s. 6d. net.

This book is a completely revised new edition of the well-known work by A. Humboldt Sexton. The revision has been done by Dr. W. B. Davidson, who, as a technical chemist, has made a practical study of the industrial uses of fuel and refractory material.

METEOROLOGY: An Introductory Treatise. By A. E. M. GEDDES, O.B.E., M.A., D.Sc., Lecturer in Natural Philosophy in the University of Aberdeen. Large demy 8vo. xx + 390 pp., with 4 coloured plates, 16 half-tones, 103 figures, 11 charts, and 29 tables. Price 21s. net.

THE FOUNDATIONS OF CHEMICAL THEORY; The Elements of Physical and General Chemistry. By R. M. CAVEN, D.Sc. (Lond.), F.I.C., Professor of Inorganic and Analytical Chemistry in the Royal Technical College, Glasgow. Large demy 8vo. viii + 266 pp., with 46 figures. Price 12s. 6d. net.

"Professor Caven's clear exposition of Modern Chemical Theory, though mainly intended for use as a text-book, will interest laymen who have not followed the developments of chemistry with close attention. Unlike the ordinary treatise, the book seeks to emphasize general principles rather than to record a mass of facts."—*Spectator*.

A TEXT-BOOK OF ORGANIC CHEMISTRY. By A. BERNTHSEN, Ph.D. *New Edition*, revised to date by J. J. SUDBOROUGH, Ph.D., D.Sc., F.I.C., Professor of Organic Chemistry in the Indian Institute of Science, Bangalore. Large crown 8vo. Price 12s. 6d. net.

A GENERAL TEXT-BOOK OF ELEMENTARY ALGEBRA. By E. H. CHAPMAN, M.A. (Cantab.), D.Sc. (Lond.), late Senior Mathematical Master at Christ's College, Finchley, N., Chesterfield Grammar School, Blackburn Grammar School, and King Edward VII School, Lytham. Large crown 8vo.

This Algebra will be completed in three parts, and will cover the whole of the ground in Algebra for London B.Sc. Pass Examination in Pure Mathematics, and similar examinations.

PART I.—Elementary Rules, Graphs, Equations. With Answers, 3s. 3d. net. Without Answers, 2s. 9d. net.
PART II.—*In the press.* PART III.—*In preparation.*

ELEMENTARY MENSURATION OF SOLIDS. By R. W. M. GIBBS, B.A. (Cantab.), B.Sc. (Lond.). Crown 8vo. Price 3s. net.

The old-fashioned problems about volumes of oblate spheroids and spheres inscribed in oblique cones have given place to calculations of the weight of the steel crank-shaft of a motor-car, and so on.

SCIENTIFIC METHOD: Its Philosophy and its Practice. By F. W. WESTAWAY. *New Edition*. Large Crown 8vo. xxiv + 426 pp., with 24 figures. Demy 8vo. Price 10s. 6d. net.

"Mr. Westaway has a singularly acute and active mind which has engaged itself with almost all branches of human study; and he has the rarest of all gifts among English speaking philosophers, that of directness and lucidity of style."—*Times*.

THE GROUNDWORK OF BRITISH HISTORY.

New Edition, brought down to 1921.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College.

With Maps, Time Charts, and Full Index. 764 pp., super crown 8vo, 8s. net. Complete in One Volume.

In Two parts. 5s. each net. Part I, B.C. 55-1603; Part II 1603-1921.

In Three Sections, 3s. 9d. each net:—Section I, B.C. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1921.

N.B.—FOR THE CONVENIENCE OF THOSE USING EARLIER EDITIONS OF THE "GROUNDWORK," A SUPPLEMENT HAS JUST BEEN ISSUED BRINGING THE BOOK DOWN TO DATE, PRICE 1s. 6d. NET.

THE GROUNDWORK OF THE WAR.

Nature Study and Handwork.

Handyman's Handwork; (a) in the School; (b) Toymaking.

Domestic Handicraft for boys and girls. A real science and handwork course.

Handwork Science (Physics, Surveying, Chemistry).

Handwork and the Application of Art (Book-binding, Decorative Stitches and Embroidery, Leather Work, and Stencilling).

Basketry and Weaving.

Needlework.

Education in the open air, with afternoon excursions.

Important Points in School Organization. (For Head Teachers and Senior Assistants.)

Musical Appreciation and Rhythmic Work.

Physical Training, Games, and Dancing.

The Teaching of English Literature, based on the Board of Education Report.

Experimental Psychology.

Civics.

A Prospectus may be obtained on application to the PRINCIPAL, Training College, Derby, after Easter. (A penny stamp should be enclosed with the application.)

These Courses are approved and inspected by the Board of Education.

Université de Lausanne.

HOLIDAY COURSES

FOR THE STUDY
OF FRENCH.

July 24th to August 25th.

LECTURES on French Literature, History, Language, and Phonetics. Practical Classes. Special Phonetic Classes.

Students may join at any time.

For Prospectus and full particulars, apply to the

Secrétariat, Université, Lausanne (Switzerland).

THE STUDY OF WORLD HISTORY,

By Mr. OSCAR BROWNING appeared in November and December, 1920. The two numbers, post free, for 3/-

SUMMER SCHOOLS and Vacation Courses.

See also pages 255 and 257.

UNIVERSITY OF STRASBOURG (FRANCE).

SPECIAL COURSES FOR FOREIGN STUDENTS.

HOLIDAY COURSES

(July 3rd to September 23rd).

French Language.—Phonetics (theoretical and practical), practice in speaking and reading (small colloquial classes), exercises in grammar, dictation, translation (oral and written) and composition, history of the French language.

French Literature and Civilization.—History of French literature, "explications" of modern French writers, introductory courses to French literature, philosophy, science and art of to-day, to French social and political life. Visits to schools, monuments, factories, &c.

German Language and Literature.—Phonetics, practice in speaking, grammar, dictation, translation, and composition. Introductory lectures to modern German life and literature.

FEES.

FOR FRENCH.—4 weeks, 80 Frs.; 6 weeks, 120 Frs.
8 weeks, 150 Frs.; 12 weeks, 180 Frs.
FOR GERMAN.—4 weeks, 60 Frs.; 6 weeks, 80 Frs.
8 weeks, 100 Frs.; 12 weeks, 120 Frs.

Special fees for students taking both French and German.

Excursions in the Vosges, the Rhine Valley, &c.
Sports.—Rowing, football, tennis, &c.

During the academic year, a course of lectures including French language, literature, conversation, and history is arranged at l'Institut d'Etudes Françaises Modernes for foreign students.
20-25 lessons per week.

Supplementary information may be obtained from the
BUREAU DE RENSEIGNEMENTS pour les étudiants étrangers, UNIVERSITÉ DE STRASBOURG (France).

English Folk Dance Society.

Director: CECIL J. SHARP.

The Summer Vacation School of Folk Song and Dance will be held at Cheltenham from August 5th to August 26th inclusive.

Particulars can be obtained from—

THE SECRETARY, E.F.D.S.,
7 Sicilian House,
Sicilian Avenue,

Tel.: Museum 4580. Southampton Row, W.C. 1.

UNIVERSITY COLLEGE OF WALES, ABERYSTWYTH.

SUMMER SCHOOL IN BIOLOGY, July 31 to August 12, 1922.

The Course will consist of Lectures, Laboratory, and Field Work on Animal and Plant Biology suitable for teachers of Natural Science in Secondary Schools.

Further particulars as to fees, residence, lecturers, &c., may be obtained from Mr. R. D. LAURIE, Department of Zoology, U.C.W., Aberystwyth, or from the General Secretary.

The SIXTH of a NEW SERIES of Articles :

SUPPLEMENTARY AIDS TO CLASSROOM WORK

will appear in the issue for June, 1922.

OTHER ARTICLES TO APPEAR ARE

MUSIC.

Miss ETHEL HOME,
Head Mistress of Kensington High School.

MATHEMATICS.

Professor T. PERCY NUNN, M.A., D.Sc.,
Vice-Principal, London Day Training College (University of London).

ENGLISH.

G. E. S. COXHEAD, M.A.,
Head Master, Hinxley Grammar School.

SCIENCE.

C. L. BRYANT, Harrow School.

ART.

R. D. LAXON, Christ's College, Finchley.

London; Mr. WILLIAM RICE, Three Ludgate Broadway, E.C. 4.

HOLIDAY COURSE in PARIS

INTERNATIONAL GUILD,

6 rue de la Sorbonne, 5e.

Sous la Direction et le Patronage de Professeurs agrégés de l'Université.

JULY-AUGUST 1922.

LECTURES in French Literature, History, Geography, Art, Phonetics.

OCCASIONAL NOTES.

A COLLECTED reprint of the presidential addresses delivered at annual meetings of the N.U.T. would, we imagine, form an instructive comment upon our national doings in education since 1870. We might call these addresses milestones on the road, were it not a fallacy to beg the question of progress by using such a metaphor. Mr. W. G.

Cove, in his able and stimulating address at the Torquay Conference could not of course record any progress during the past year. It was inevitable that he should be occupied chiefly with the reactionary Geddes Report. We do not think it necessary to assume, as Mr. Cove does, that the persons who drew up that report are callously indifferent to the welfare of the people. We think the Government of which Mr. Fisher is a member blundered hopelessly in asking for a report on education from men who, by instinct and training, tend to regard the nation simply as a business concern, and naturally therefore apply to schools, universities, libraries, museums, and possibly churches also, the crude test—do they pay? For practical purposes these men know only material values, and profess no concern with such "impalpable essences" as spiritual values. We all have our weaknesses; and the characteristic weakness of the business man is manifest in every line of the report. We strongly approve of Mr. Cove's remarks upon teachers of young children. Mr. Fisher's deliverance on that subject may have been good enough for an Oxford don. It is not good enough for a Minister of Education. Indeed it is one of the worst things uttered by a Minister of Education since Robert Lowe's time. So also is his opinion about evening schools,

which are not to be properly maintained even as a poor substitute for the doomed continuation schools. We vastly prefer Mr. Cove's way of looking facts in the face to Mr. Fisher's too easy optimism.

IT was hoped that the publication of the Burnham Reports would put an end to all local salary difficulties, inasmuch as machinery was set up for dealing with the problem on national lines. We regard it as a great misfortune that certain Local Authorities have taken individual action without any reference to the Burnham Committee. In Southampton the Elementary Teachers, already poorly paid—only the provisional minimum scale was in force—were told that they would have to share in the 20 per cent reduction which was proposed for all municipal employees. The "key-figure" of the provisional minimum scale is £300. Thus it was proposed to reduce this to £240—and it is known, of course, that the Government wish to make a further 5 per cent cut for purposes of Superannuation. When it is added that the Board agreed to the allocation to Southampton of Scale III, with its key-figure of £380, the gross unfairness of the whole position becomes still further manifest. The teachers have refused to accept the reduction, and, as the Local Authority have broken the truce, they have said that they will not return to work except under the proper scale (Scale III) with certain concessions as to carry-over. The Committee which was negotiating with the teachers accepted this, but the Town Council refused to endorse the settlement. The result is that there is a lock-out of about 500 teachers in Southampton.

A SOMEWHAT similar situation exists at South Shields. Here there are two secondary schools, and the teachers all received notice of dismissal with the offer of re-engagement at a reduction of 15 per cent. They have refused to accept reappointment except on the full Burnham Scale, and it seems probable that the secondary schools will be unable to reopen next term. It will be remembered that following the refusal of a neighbouring Authority—West Hartlepool—to adopt the Burnham Scale the difficulty of efficiently staffing the Girls' Secondary School was so great that the Board refused to recognize the school as efficient. Teachers who are concerned for their future prospects will naturally be reluctant to take service under Authorities likely to be thus unfavourably singled out. The moral of all this is that once a national agreement has been signed it ought not to be varied except by the signatory bodies. The action of Southampton and South Shields is entirely unconstitutional. They have struck a very serious blow at the principle of settling disputes by negotiation, and we trust that before long better counsels will prevail.

THE effect of the "economy campaign" has been brought home with startling suddenness to a large number of secondary school teachers in London. The London County Council was one of the first Education Authorities to come to an agreement with its teachers after the publication of the Burnham Report. Negotiations between the Council and the secondary school teachers were in progress during the autumn of 1920, at which time the Report had not been accepted by the Teachers'

Associations. It was known that there was a strong minority, which might easily be turned into a majority, against ratification. Hence, as the result of conferences between accredited representatives of both the Council and the secondary school teachers, it was agreed that there should be an immediate full "carry-over" and that all teachers in the aided and maintained schools who had been placed, with the sanction of the Council, on the old higher scale, should receive the allowance for a good hon. degree. It should be observed that, according to the Council's regulation, no one could be placed on the old higher scale who did not possess a good hon. degree or its equivalent. At the same time, an academic "equivalent" had not in many cases been insisted upon, so that long and meritorious service, for instance, had received recognition in this way. In a word, what happened was this: the Council's old scale was a "good hon." scale, therefore all those who were already on it were deemed to be entitled to the "honours allowance" of the Burnham Report. Another relevant fact is that the teachers agreed with considerable reluctance to repay a loan of £45 which had been granted in anticipation of the adoption of the Burnham Scale from April 1, 1920.

THIS arrangement has now been in force for a year and seven months, and the Board of Education paid grant on the expenditure involved during that time. But the Board now stated that they will not, after March 31, pay grant on any honours allowances that are not strictly in accord with the recently issued appendix to the Burnham Report, though in agreeing to this appendix, the teachers' representatives on the Burnham Committee never anticipated that it would be applied retrospectively. This pronouncement affects about six hundred teachers in London, and steps were at once taken, without any consultation with their representatives, to instruct the school authorities to give them notice of dismissal with an offer of reinstatement at new salaries with the honours allowance deducted. This startling procedure met with a prompt response, and the full meeting of the Council was supplied with information concerning the agreement which caused it to refer the whole matter back to the Education Committee. There appears to be no reasonable doubt that the Council, through its representatives, did make a definite agreement with its secondary school teachers. The agreement then made and accepted by both parties ought to stand, and the strongest pressure should be brought to bear on the Board to ensure that grants on this expenditure shall continue to be paid. But whether the Board paid or not, the Council will, we feel sure, see to it that any agreement made in its name is duly honoured. The attitude of the Board appears to us to be unreasonable. Local Authorities have been allowed to enter into agreements with their teachers, and it is unfair at this late stage for the Board to endeavour to back out of paying their share. London is not the only Authority involved. Some other areas have adopted a reasonable interpretation of the "good honours" clause which ought not to come up for review under the new appendix. Further, other Authorities have acted generously (as they were recommended to do) in placing non-graduates on the graduate scale. This action is also being called in question by the Board. We feel bound to remark that this action will occasion great bitterness,

and that in our opinion the action of Local Authorities who have acted in good faith in these matters ought not now to be questioned.

THE action of the Board of Education with regard to the admission of recognized students (King's Scholars) to the Training Department of the University of Leeds has created no small stir in local circles and some indignation. It appears that the University authorities were admitting these students in the normal way and preparing to admit at least the same number as last year. About the middle of February, without warning, they were instructed not to admit any more. At that date it appears that practically no local students had been admitted. Apparently the University authorities were reserving a sufficient number of places for them. As matters now stand, however, few, if any, students from Leeds schools can be admitted, and several schools in the vicinity are in a like position. This is viewed as a hardship, and with good reason, and strong representations have been made to the Board by the University and the Governors of various local schools. It appears that in the ordinary course of events the Training Department, even if it admitted no more than last year, would have had in all a larger number of students than in the previous year. This is due to the fact that with the knowledge and desire of the Board of Education the University authorities have instituted a four years' course of training in place of the previous three years' course, and next year will be the first year in which the complete four years' course comes into operation. In these circumstances it seems somewhat extraordinary that the Board have adopted their present attitude.

IF Mr. Macquisten's speech on the Civil Service Estimates really represents the views of the man in the street, the need for higher education in this country is greater than we have supposed. To describe the boy with a vigorous intellect as knowing that the education given by the battle of life was the only education he could ever hope to acquire, and to infer that higher education was for the boy who wanted to be a hanger-on, is simply grotesque. The great majority of boys begin the battle of life at the age of fourteen or earlier, with no choice in the matter, and to the great impoverishment of the effective intellect of the country. Again, Mr. Macquisten asks what training for character there can be in a State-aided school. He appears to forget that a considerable number of the public schools, whose success in character-forming he praises, receive grants from the State. He calls State-aided education eleemosynary, and from this gibe we must infer that if the nation, in its collective capacity, decides that the business of education must be nationally managed and paid for out of national funds, those who participate in its benefits are bound to bear the brand of pauperism. This is surely individualism gone mad. The remarks of the honourable member on the "privileged class," the "priesthood" of teachers, fighting in the press behind the bodies of children as the Germans fought behind women and children in Belgium, are as absurd as they are offensive. It is perhaps inevitable that the teaching profession, in its opposition to the anti-educational bias of the Geddes Report, should have

The Policy of the Board.

Mr. Macquisten on Education.

laid itself open to misrepresentations of this kind, and that its defence of an honourable national agreement should be met with the accusation that it considers only its own interests. But it is a pity that a member of Parliament should so distort facts. Let us hope that when—as Dr. Murray tells us he does—Mr. Macquisten passes the plate round in his Edinburgh church on Sunday mornings, he will collect a juster and more charitable view of the teaching profession.

THE Education and Parliamentary Committee of the British Science Guild appear to share the opinion of the Committee on National Expenditure on the question of the percentage system of Government grants to Local Education Authorities. "In practice," they say, "it has entailed unexpected and costly consequences; is proving subversive of the principle of local administration, and has led to an unnecessary multiplication of officials doing the same work." The provision of educational facilities is a national, and not simply a local, service, and we have always contended that it is equitable for the Central Exchequer to bear a fair share of increasing costs. At the same time, if the present complicated system does, in effect, result in restricting the freedom of local administration, it should not be impracticable to devise some means by which the responsibility of the government will be adequately recognized and local autonomy preserved. There is no doubt that financial partnership under present conditions does increase administrative cost, but relatively, to the expenditure involved, this is a small matter that scarcely merits consideration. The British Science Guild suggests that Education Committees should be "rationed," both by the State and the Local Education Authorities to whom they are responsible. As the State is committed to three-fifths of the expenditure in what is by far the largest proportion of the educational liability, there might be some difficulty in doing this without completely arresting necessary developments.

THE question of finance and the extent to which bodies responsible for educational administration should be "rationed," or controlled, is not peculiar to this country. We gather from the *Educational Review* that the matter is one of some importance in the United States. Boards of Education on the other side of the Atlantic correspond, more or less, to the Local Education Authorities here, and discussing the "Financial independence of Boards of Education," Mr. Judson S. Wright puts forward a claim for complete immunity from control. "The public school system must be maintained with the highest possible efficiency. Liberal public expenditures are demanded by the people of all cities and no complaint will be made if effective results are obtained. These results can be brought about only by a single agent being responsible for the levying of the tax and the expenditure of the money. The people should demand the financial independence of Boards of Education in every city of the Union." In days gone by School Boards in this country enjoyed the freedom demanded by Mr. Wright. There are still people who deplore the abolition of School Boards and who feel that the interests of education demand the election of authorities *ad hoc*. We have always believed, however, that the cause of education would be advanced, and not

retarded, by definite association with other departments of civic responsibility, and the experience of the last twenty years has confirmed that belief. We agree with Mr. Wright that it is educationally a sound principle for school authorities to have the right to determine, within reasonable limits, the amount of funds they need and to administer such funds without interference.

THE reports on the first year's working of the Day Continuation Schools established by the London County Council are distinctly encouraging; they sound a very clear note of hopefulness and rich belief in the value of these schools for the community. The eight hours' weekly instruction comprises one hour each for calculations, drawing, physical exercises, and general subjects, and two hours for English, including history and geography, and two hours' practical work. One of the chief difficulties, as might have been anticipated, was with children who are described as possessing sub-normal mentality. For these, however, a curriculum of a very elementary nature, and entailing more handwork, was found to be effective. And the practical work, both for boys and girls, proved to be of great value. Not unfrequently students who were backward in other subjects revealed an interest in this work which reacted upon the class work to its ultimate improvement. The attitude of employers appears to have changed very considerably. This has been due, partly to the trouble taken by the school authorities to arrange times of attendance as far as possible to meet the convenience of those chiefly concerned, and partly to a growing recognition of the benefit derived by the young persons themselves. The establishment of School Employment Bureaux proved a valuable development, and formed a useful link in the promotion of friendly relations between teachers, parents, and employers.

DURING the past month the *Times* has opened its columns to a correspondence on the well-worn subject: What shall we do with our boys? At the present time the restriction of trade and the Geddes axe on the services have made openings for young men leaving the public schools and the universities exceptionally difficult to discover. The Army, the Navy, and the Air Force need fewer officers, for not only are the forces smaller but also a large number of supernumerary officers have to be absorbed. The Indian services—civil, police, and army—also need fewer officers; and owing to the situation in that country few young Englishmen desire to work there. When there is a dearth of situations the best prepared candidates obtain the preference, and it behoves all students, and their guardians, to see that they make the best of their time at school. It has been so long the habit of boys at the more expensive preparatory and public schools, with some exceptions, to pass through with the minimum amount of work, that our upper and upper middle classes, although more sportsmanlike, are certainly less instructed than those of our chief trade rivals. And we must not forget that women now are competitors for many posts that formerly were occupied by men only. We foresee that those who are not able to reach the desired standard at school will be obliged to be coached privately or to accept any minor position that presents itself. Parents are often ignorant of the advice they can

Percentage

Educational
Finance in U.S.

Careers for
Boys.

obtain in their difficulties. The Head Masters' Association has an Appointments Committee that has already done excellent work, and the Future Career Association is always ready to offer its services. There are many manuals too, on the choice of a career which do not give much actual help in the placing of a boy, but do clear away much doubt in deciding what possibilities exist and what careers are evidently impossible.

Transfer of Scholarships. THE recommendation of the Departmental Committee on Scholarships and Free Places to the effect that holders of scholarships removing from one area to another should be taken over by the Authority of the area to which they remove, has been approved by the County Councils Association and also by the Municipal Corporations Association. This is obviously the case where uniformity of procedure is essential. There are still, however, a good many authorities who prefer to retain responsibility for the scholarship they have awarded and to continue the allowance equivalent to its value during the tenure although the holder migrates to some other administrative region. The conclusion of the Departmental Committee endorsed by the Association notwithstanding, there is much to be said for the alternative system. The Authority awarding the scholarship has done so with special knowledge. It may have been more or less liberal than the Authority of the area to which a pupil may remove. It is difficult for another committee to take over a liability that may have been contracted under entirely different conditions than those applicable to the scholarships they award.

Art for Matriculation. THE plea of the Art Teachers' Guild for the full recognition of Art in the First Examination as a Matriculation subject deserves, and should receive, sympathetic recognition from the authorities concerned. Art is a regular and valuable subject in schools, useful in later life to all sorts of people as a second language and means of expression: it can be made of any standard of difficulty to correspond with other subjects, and can be and is taught in a sound way; there is no reason why it should not rank as a fifth or sixth credit for Matriculation as well as German, Botany, and Geography. For many pupils it is of far more profit as a study than is a foreign language: they find English hard enough, and can express themselves far more completely and satisfactorily through their fingers, and can with far less wasted effort attain a credit standard in Art than in a foreign language. To most girls, to all teachers and science students, to intending engineers and manufacturers, as well as to many who enter business, the practical value of Art as a school subject needs no amplification. If it is not recognized for Matriculation as counting towards a pass, it has in general to be dropped in the last year, or even the last two years of the pupil's schooling, just when real progress can be made. Rarely is it possible with so much else, compulsory mathematics, the language demand, and the science that the Board of Education requires up to the First Examination, to find time for extras. Music, Art, too often Divinity, have to go in that last year. What stands in the way of this recognition? Is it academic ignorance? To-day surely university authorities know that Art is not a mere ladylike accomplishment, and that it can be taught thoroughly in schools. Some Matriculation

Boards have of late shown such breadth of view and knowledge of educational conditions that we may hope for some measure of reform in this matter as in others.

"THE Problem of the Small School" was discussed by Mr. C. G. Watkins, the Secretary to the Bucks Education Committee, at the meeting of members and officials of Local Education Committees at the annual gathering of the National Union of Teachers at Torquay.

The Small School. Mr. Watkins made an interesting and useful contribution to a question that is of particular importance just now. He estimates that to-day there are about 2,000 schools in England and Wales with fewer than thirty children in average attendance. They are expensive to maintain and cannot, under the best of conditions, afford the educational facilities available for children attending larger schools. Mr. Watkins favours control or consolidated schools. He says that in Bucks two schools existing for the benefit of fifteen and nine children respectively, and costing between them £450 to maintain, were recently closed. The children, for a third of the cost, are motored to other schools where they receive a much better education. Mr. Watkins notes that in the United States, during the past twenty years, 50,000 one-teacher schools have been abandoned and 12,000 consolidated schools substituted. In Massachusetts the cost of transport has grown from £4,400 in 1888-89 to £135,000 in 1918-19. We are of opinion that economies might be effected, and better results obtained, in this country by consolidating educational facilities in sparsely populated districts. The advent of the motor-omnibus has simplified the problem. One of these vehicles traversing a circular route of ten or twelve miles might collect the children who now attend half a dozen very small schools, and also prove of considerable value for other purposes in an agricultural district. There is, of course, the difficulty presented by the dual system of school management. This frequent cause of unproductive educational expenditure would not, however, bar the way in dealing with schools of under thirty. Adequate facilities for the transport of the children might render it possible for such schools to be designated as "unnecessary."

THE UNIVERSITIES REPORT.

WHEN, on March 3, 1919, the Universities of Oxford and Cambridge applied for State financial assistance, it was obvious that before the request could be granted the Government would have to be assured of its necessity. As a result a Royal Commission was appointed in November, 1919, "to inquire into the financial resources of the Universities and of the Colleges and Halls therein, into the administration and application of those resources, into the government of the Universities, and into the relations of the Colleges and Halls to the Universities and to each other, and to make recommendations."

During the last two and a half years the Commission has held sixty-six meetings, examined over ninety witnesses, and has now issued a Report extending to 256 printed pages*.

The total cost of the Commission will be not far short of £10,000. Apart from questions of curriculum and the internal government of the Colleges (as distinguished from University government) which apparently did not come within the terms of reference, the Report ranges over the whole sphere of activities of the two Universities.

* Royal Commission on Oxford and Cambridge Universities Report [Cmd. 1588]. 6s. net.

In a prefatory historical survey, admirably lucid, the broad outlines of the development of the Universities are traced and a fair and impartial picture of them as they exist at present is given. The Commissioners do not seem to have found anything seriously wrong with the two Universities. At all events they do not suggest any really fundamental changes. The Report is distinctly conservative. It is interesting to note that accompanying the 176 recommendations there are only some half-dozen reservations. Mr. Asquith seems to have kept his team well in hand.

The question of finance assumes a position of first importance. Increases in the number of students, the variety of subjects taught, and the amount of instruction to each student have necessitated great increases in staff and expenditure. These coupled with the change in the value of money have made the Universities unable to pay their way. Only an interim grant of £30,000 a year from the State made it possible for them to continue on their present basis. But many of the staffs are underpaid and overworked. The lack of a satisfactory pension scheme makes the fixing of a retiring age out of the question. In consequence "professors must often continue as now to serve till they are over seventy and even eighty years of age." Again, the number of teachers is insufficient and the amount of time given to research is totally inadequate. The existing libraries and museums are not properly staffed or supplied with new books and material for study and research. Nor is it possible to develop new subjects of study. The Report makes it clear that the case for a largely increased income has been made good.

With regard to the sources of additional income the Report is opposed to such increase of fees as would make Oxford and Cambridge into "rich men's Universities." The increased taxation of the Colleges would not provide a new access of revenue; it would simply mean a transfer of control of money. And present conditions are unfavourable to private benefactions. The Commissioners recommend that each University should receive from the State, in place of the interim grant of £30,000, an annual grant of £100,000, plus a special grant of £10,000, for a limited number of years, and a lump sum for pension arrears. These grants would have as a first charge the salaries and pensions of teachers. It is suggested that the normal salary of a University professor should be about £1,200, while the stipends of readers and lecturers should be fixed according to the needs of the work. As for pensions, the Federated Superannuation System of the Universities is recommended, in which the governing bodies contribute a sum equal to 10 per cent of the salary, and the teachers 5 per cent. The remaining grant would be applied to research, additional staffs, laboratories, libraries, museums, further provision for non-collegiate bodies, extra-mural work, and grants towards women's education.

While the question as to whether so large a State grant would affect the autonomy of the University does not seem to have been considered, the Report states that if there were any danger that grants of public money would lead to the State control of opinion in the Universities it might be the lesser of two evils to decline in efficiency than to lose independence. "But," continues the Report, "the ways of thought and feeling of the modern British community are hostile to any development in the direction of State control of the academic spirit, and the public grants already enjoyed by the old Scottish and new English Universities have not led to State interference with opinion and tendency in those institutions."

The closer relation of the Colleges with the Universities is also a question which assumes importance in the Report. The growth of the College system is traced and tribute paid to its many excellencies. At the same time it is made clear that in certain respects the work done by the Colleges needs to be supplemented to a greater extent than at present by University activity. Certain expenses of the Colleges are criticized and regulations for increased contributions

by the Colleges to the Universities suggested, but no attempt is made to put them under the control of the Universities or to deprive them of their power of initiating new policy. The Commissioners believe that a number of independent Colleges in wholesome competition with one another is a source of strength to the University. They recommend, however, that every proposal for a change in College Statutes, whatever its nature, should be submitted to the University before being sent to the Privy Council.

Certain proposals are made regarding Fellowships. It is suggested that College Fellowships should be divided into five classes of which two only should be stipendiary, the others deriving income or pension as the case may be from University sources. Stipendiary Fellowships would be conferred on those only who were employed either in administration, teaching, or research. This would enable a College to attach to itself a larger number of distinguished men within the University and thus make for a much closer linking of College with University than at present. Again, it is recommended that there should be better co-ordination among the Colleges regarding scholarships. A Central Committee to lay down principles regarding the grants of financial assistance is proposed. Normally, scholarships should carry with them only the privilege of rooms in College free of rent and rates; no cash emoluments should be granted to scholars and exhibitors except in cases of need and on supply of full information as to private means; and the maximum sum granted should be £80 in addition to free rooms. The further development of the existing system of State scholarships is advised, but it is somewhat ironical that the publication of the Report coincides with the publication of the Education Estimates in which the Government is proposing to cut down the amount previously voted for these scholarships.

The cost of living in Colleges is seriously tackled, and various suggestions for reducing this expense are made such as the introduction of the system of bed-sitting-rooms, the establishment of "colony" lodging-houses, the institution of co-operative laundries, the extension of the system of common meals in halls, the provision of simple and economical meals, and the appointment of a resident catering and buying expert.

Still another important matter dealt with by the Commissioners is the government of the University. The proposals aim at simplifying the administration and giving the resident administrators and teachers more control. Two new Boards—the Board of Study and Research and the Finance Board—are created. These Boards are to report to the Council.

Among other suggestions are the institution of a common University Entrance Examination and ampler facilities for the education of women. It will interest some to note that the Cambridge Committee recommend "that Cambridge remain mainly and predominantly a men's University though of a mixed type," the number of women graduates being limited to 500.

On the whole one feels that Oxford and Cambridge have come through the ordeal fairly well. There are no proposals of a revolutionary nature—the main organization remains untouched. A number of changes, many of them minor ones, are suggested which are intended to lead to greater efficiency. It is probable that the Report will remove some misconceptions by the public. It may surprise some to learn that "most of the undergraduates are serious and hard-working students, if not entirely divested on all occasions of the exuberance natural to congregated youth," and that a large and increasing proportion of students are poor men maintained at the University either out of College endowments, public grants, loans, or personal assistance. Whatever else the Report does it leaves a picture in the mind of a conscientious, overworked, underpaid staff struggling with work which they cannot adequately compass, and hence deprived of those opportunities for research which one naturally feels ought to be provided at Universities of the standing of Oxford and Cambridge.

HISTORY EXAMINATIONS.

BY E. H. DANCE.

ALL examinations are admittedly to some extent evil, and involve certain disadvantages which everybody is prepared freely to admit. They are always times of stress, and to that extent they fail in their principal object of providing a precise test of the candidate's ability. The ability to answer examination questions is a specialized sort of skill, and want of it may place extremely competent and even brilliant people in an entirely false position on the list of results. Then there is the irreducible minimum of cramming, which in certain subjects the most perfect system of examination yet devised has entirely failed to eliminate. Nevertheless, the advantages of examination are generally held to outweigh their disadvantages, and they remain with us as a necessary and inevitable evil. They are a convenient halting place in the school course, an annual stock-taking, when a certain amount of unnecessary knowledge can be cleared in preparation for fresh work; they provide a convenient record of achievement and ability for the use of authorities; finally, they act in advance as an extremely effective spur to the pupil, and school masters are already beginning to regret the Board of Education's decision to discourage the public examination of middle forms.

None of these, however, are features peculiar to examinations in history, with which we are here specially concerned, and which certainly stand in need of immediate attention. History examinations, more, perhaps, than any others, are characterized by a general listlessness and vagueness of aim which is the direct legacy of the careless attitude towards history teaching that prevailed until recent years even among history specialists, and which has not yet, by any means, been abandoned by those not immediately concerned with the subject. Whereas the tide of educational renaissance in the last two generations swept into its course methods of teaching history, and is only just leaving them high and dry in some sort of stable position, history examinations still meander unconvincingly along the sluggish stream of academic tradition. Teaching has been revolutionized; examinations remain unchanged, and will continue to be unsatisfactory until they have been galvanized into some sort of organic connexion with the methods and ideals of the teaching which they are supposed to test.

What are those ideals? Primarily, history teaching has learnt to step into line with the general psychological development of recent years, and instead of merely seeking to instil lifeless facts into the mind of the pupil, endeavours, in accordance with the educational ideal, to combine facilities for self-expression with the provision of mere information. The informative side of history can never be avoided, and it has its proper place in the educational scheme. But the history teaching which does nothing but inform is a failure. History provides a better opportunity than any other subject in the curriculum for a training in what I have elsewhere called "imaginative" induction, in order to distinguish it from that of the science laboratory, where the phenomena upon which induction is based are both material and isolated. Now it is precisely this aspect of modern history teaching which receives least recognition in modern history examinations. Those examinations attempt, indeed, to test the ability of the candidate to deal with generalizations, as well as his knowledge of the facts. But not only are the facts of which knowledge is demanded more extensive than are required for the ordinary use of history by the educated citizen: in addition to this the generalizations themselves are not, as a rule, the result of personal induction, but are almost invariably imposed from outside. The self-expression of the pupil has rarely played any part whatever in their formation.

The results are sufficiently clear. Preparation for most history examinations, in spite of general lip-service to the

educational ideals of our day, is still almost invariably a cram. History questions, in order to avoid demanding nothing more than a catalogue of facts, are confined to a limited number of generalizations which have percolated from the works of the great historians into the text-books, and have been accepted by pupils from the latter without question. In other words, every history examination of the prevailing type fails to test anything whatever except the memory of the candidate. Objective facts combined by another mind into equally objective generalizations are quite sufficient material for excellent results. History is in consequence the playground of coaches and correspondence colleges, who can easily anticipate the questions that are likely to be set, and cram them into their clients; and it is a standing tribute to the general integrity of history teachers that so many of their pupils fail, and so few obtain distinction. It means at least that many are bold enough to prefer educative methods to factitious results.

That is the double fault of the history examination. History teaching has pulled itself into conformity both with educational ideals and with the requirements of modern citizenship, whereas the examinations remain, in defiance of both, merely a test of memory, whether the memory be of events or of received opinions. The need is to bring examinations into line with teaching, and therefore with the principles which that teaching embodies. If this is to be done, history will have to take up more room in the examination than hitherto, just as it is also claiming to take up more room in the curriculum. History stands almost alone among the subjects most generally taken by candidates for leaving certificates, in having allotted to it as a rule only one paper, and never more than one kind of paper. The different aspects of language teaching are represented in examinations by unseen and composition: of English teaching by composition and literature: of science by theoretical and practical papers. Even art has its "model" and "design," and scripture its Old and New Testament. History teaching is not the one-sided affair that the examination time-table seems to represent, and its two-fold function requires a two-fold testing. While on the one hand the existing test of memory cannot be forfeited, the educative process which lies at the root of the best modern methods of teaching the subject ought to receive due recognition. In other words, what is needed is a separate examination in individual induction. Examinations in geometry, for example, set "riders" not principally in order to test knowledge of the propositions, but in order to ascertain whether the deductive faculty of the candidate is properly developed. History examinations ought similarly to test, not merely a knowledge of facts (again, whether the facts be events or received opinions), but the development of the candidate's ability to construct his own generalizations from given historical data. Whether those data should be printed at length on the examination paper in the fashion of a passage for précis, or whether access should be given during the examination to recognized works of reference (and this is by no means a new suggestion), is not a matter of fundamental importance. The vital requirement is that the movement, which is already in full swing, to devote much of the history lesson to training in induction from political facts, should be encouraged by the knowledge that these activities are not comparatively useless for examination purposes, and that teachers who merely cram their pupils will not monopolize such rewards as examination results provide.

At the same time the prevailing characteristic of the memory test would need revision. In a double examination of this type original generalizations would receive adequate attention in the induction test, and it would no longer be imperative to adapt questions on matters of fact to the present demand for some sort of reasoning process during history examinations. With one paper devoted exclusively to original induction, the other might be unblushingly confined to mere memory, whether the memory were of nothing more than the events of the

period, or also of the views of recognized authorities. There would even be no longer any inherent harm in asking merely for lists of dates in the old style, or for the terms of statutes and treaties and similar matters of pure fact. This paper, however, would test the candidate's command of the knowledge required by an average education, and it would therefore be undesirable to permit the enormous range of choice which is a most notable feature of the present type of history examination. It may be objected to this that the elimination of the choice of questions would press with undue heaviness on individual candidates. That, however, is a chance which any examination involves, and in other subjects the possibility is not commonly used as an excuse for setting alternatives, even in the case of a language unseen, where it is often possible that one or more of the passages are not unseen at all. If the object of the examination is to ascertain whether the candidate has succeeded in acquiring the knowledge which he ought reasonably to possess, there is no inconsistency in penalizing him for failure to learn a specific portion of that knowledge. An occasional candidate may, indeed, be fortunate in the questions set, and pass undeservedly: that difficulty will always remain. But where the paper proves to be beyond his powers, the candidate cannot, on our hypothesis, complain of unfair treatment, since he has simply failed to show that he possesses knowledge which the examiners believe to be essential.

In any case the precise character of the memory test is matter for more detailed consideration elsewhere, and it is in this direction that the present examination system is least unsuccessful. The fundamental defect is that in the endeavour to fulfil two functions simultaneously, neither is properly performed. The necessary memorizing can be accomplished by candidates through sheer cramming, and the generalizations which are at present required in order to minimize this evil are such that they defeat their own ends by merely leading to more intensive cramming, since they are themselves easily anticipated and committed to memory. What is needed is an entirely new type of question; teachers have long ago realized that their concern is much more with the minds of their pupils than with the matter of their own particular subject, and until examiners learn that it is their business to adapt themselves to this development and test the logical alertness as well as the memory of the candidate, examinations will inevitably remain in the academic groove.

Finally, there is an obvious improvement which could be made in the syllabus itself. At present, the work set for examinations is defined simply by two years, and no indication is given of the precise ground to be covered within those limits. This has two clear disadvantages: in the first place, by its vagueness, it stimulates the tendency, always so difficult to eradicate, towards a desultory treatment of the subject, which in consequence has hitherto received less systematic attention than almost any other. And in the second place a single year is never a suitable limit to any historical period, since it inevitably cuts in two the majority of the movements which are in progress at the time. History is continuous and not merely a succession of even partially water-tight periods, and therefore no given year can possibly be a satisfactory halting-place.

Both of these difficulties would be at once surmounted if examining bodies published their syllabuses, not, as at present, merely in the form of periods determined by two inevitably arbitrary dates, but as a series of topics, of which knowledge is required without reference to the time of the beginning or end of the movements with which they deal. Thus instead of being told vaguely to learn English history, for example, from 1485 to 1714, candidates would be given a list of definite topics for study, beginning, perhaps, with the Renaissance and the New Monarchy, and ending with the beginnings of the Party System and the Decay of Jacobitism—all four of which overlap the ends of the period. This method is already in general use for mathe-

matical, science, and geography syllabuses, and if it were adopted for examinations in history, not only would pupil and teacher and examiner cease to be confined by the arbitrary chronological limits which have for so long been felt to be intolerably irksome; at the same time attention would be focussed, at the very outset of the course, upon essentials, instead of being dissipated in directions determined by the possibility of capricious questions; while teaching and learning alike could become more carefully systematic, and therefore more profound and more valuable.

EGYPT: OLD AND NEW

AFTER more than 2,000 years, Egypt has again a native king; in those far-distant days under the Pharaohs, she had long struggles with Assyria and Babylon, the powers of Mesopotamia, wars of which we learn from the books of Hebrew prophets, for Israel was a buffer state between these mighty opposites. At last, Persia rose on the ruins of Babylon, and about 340 B.C. her king, Artaxerxes, conquered Egypt; soon afterwards, Alexander of Macedon overthrew the Persian Kingdom, and at his death his dominions were divided. Egypt came under the rule of a dynasty of Ptolemies, who had constant wars with the rulers of Syria; it is of one of these, Antiochus Epiphanes, that we read in the Book of Daniel. Gradually the Romans intervened in these disputes, and the end came in the last century B.C.; Shakespeare is for many English-speaking folk the source of information about Julius Cæsar, Antony and Cleopatra, who were the chief actors in the later part of the story, and Egypt became a Roman province in 30 B.C.

For centuries, the history of the country, apart from that of commerce (Egypt was a granary for Rome) centres round philosophy and religion; Egypt did not agree in Christian doctrine with the rulers of Constantinople, and therefore she fell easily under the power of the followers of Mahomed, and was conquered by the Fatimites in 639 A.D. They ruled until about 1163, and were succeeded by Saladin, the opponent of Richard of Anjou and England; then in 1250, during the crusade of St. Louis (IX) of France, the Mamelukes rose to power and ruled the country until their conquest by the Turks in 1517.

For nearly three hundred years Egypt has no history of importance, until in 1798 Napoleon attempted its conquest and was defeated by the British; after that, both France and Great Britain were interested in the country, partly because it belonged to the Turkish Empire, partly because it was on the highway to India. We know from our text-books of British history how Mehemet Ali, as an almost independent vassal of Turkey, came to the help of his suzerain against uprising Greece and how his fleet was defeated at Navarino, but it was Ismail Pasha and his extravagances that inaugurated the modern history of Egypt. France and Great Britain in 1878-9 intervened in the interest of his creditors and established a dual control of the country and its finances, but in 1881-2, with the revolt of Arabi Pasha, France left the suppression of disorder to her ally, and Egypt was occupied by Great Britain alone as a self-constituted mandatory for all concerned; Mr. Evelyn Baring (later Lord Cromer) in the course of many years made Egypt once more prosperous.

When, during the Great War, Turkey declared war on Great Britain, the immediate reply was a repudiation of her suzerainty and the proclamation of Egypt as a protectorate; since then, certain leaders among the Egyptians have agitated for more independence and, at last, under the guidance of Lord Allenby, Britain has given to the country what they desired, a native king, who is, however, protected from interference by other powers by what has been described as a "Monroe doctrine."

PERSONAL PARAGRAPHS.

THE Right Rev. Robert Henry Whitcombe, Bishop Suffragan and Archdeacon of Colchester, whose death was recently reported after a long illness, in his sixtieth year, was formerly an assistant master at Eton. He was educated at Winchester and won a scholarship on the Kindred Foundation at New College, Oxford, where he took a First Class in Mathematical Mods and a First Class in Natural Science. On leaving Oxford he accepted a post as assistant master at Wellington College, and while there he entered holy orders. In 1889 he became an assistant master at Eton, where he taught till 1899, when he was presented to the living of Hardwicke, Aylesbury, acting also in 1902 and 1903 as diocesan inspector of schools in the Oxford Diocese. But what most affected his future was his appointment by his college in 1903 to the vicarage of Romford, Essex; for 1903 was also the year of Dr. Jacob's translation from the See of Newcastle to that of St. Albans, and Dr. Jacob was himself an enthusiastic Wykehamist and New College man, who soon made use of the Vicar of Romford as examining chaplain, and formed a very high opinion of his capacities. In 1909 he was appointed Archdeacon and consecrated Bishop Suffragan of Colchester. Towards the latter part of the Great War Dr. Whitcombe served in France as a Chaplain to the Forces.

THE Governors of St. Dunstan's College, Catford, have appointed the Rev. F. G. Forder, head master of the Grammar School, Skipton, since 1917, to succeed Mr. C. M. Stuart as head master. Mr. Stuart retired at Easter and is this year Chairman of the Head Masters' Association. Mr. Forder is an old pupil of St. Olaves, and graduated from Christ's College, Cambridge. He was First Senior Optime in the Maths Tripos, 1905, and he obtained a Third Class in the Nat. Sci. Tripos, Part I, in 1906. He served as an assistant master at Charterhouse from 1906 to 1917.

MR. A. M. MCINTOSH, assistant master at Giggleswick School for the last seven years, has accepted the head mastership of the Grammar School, Skipton, in succession to the Rev. F. G. Forder. The appointment will be popular locally, for Mr. McIntosh had previously served as an assistant master at the school for a period of six years. He was educated at Bredalbane Academy, where in his last year he gained the Stewart and Menzies bursaries. After a four years' course at St. Andrew's University he graduated M.A. in 1908 and was appointed to Skipton School in May of the same year. He was made second master in 1912, and left two years later to take up duties at Giggleswick. During his six years at Skipton he served under three head masters—Mr. Shawyer, Mr. H. V. Plum, and Mr. A. C. Powell. Mr. McIntosh is keenly interested in sport, having played for his university at Rugby football.

THE death is reported of Dr. H. N. Dickson, formerly Professor of Geography at University College, Reading, and head of the Geographical Section of the Intelligence Department of the Admiralty, at the age of fifty-five. Henry Newton Dickson was born on June 24, 1866, and was educated at the University of Edinburgh. The leading interest of his life was the teaching of geography according to modern methods; he viewed it as a necessary foundation for the study of history, politics, and economics, on the one hand, and of several kindred branches of pure science, on the other. He spent a considerable period in early life as an observer in the Ben Nevis Observatory, and also carried out important oceanographical investigations in the North Atlantic, north of Scotland. He was a lecturer in the School of Geography at Oxford at the period of its inception, and proved himself there an inspiring teacher in the allied physical subjects of climatology and oceanography.

Thence he went to University College, Reading, as Professor of Geography and Commerce. In 1915 he was invited to assist the Intelligence Division of the Naval Staff in the formation of a geographical section. He was rewarded for his war service with the C.B.E. He had recently completed his work, mainly on the geographical side, as principal assistant to the editor of the supplementary volumes of the "Encyclopædia Britannica" (12th Edition). He was president of the Royal Meteorological Society in 1911-12, and of the Geographical Section of the British Association in 1913.

MR. L. G. THORNER, the newly appointed Director of Education for Huddersfield, began his career as a monitor at an elementary school in Lancashire. He was trained at St. Mark's College, Chelsea, and graduated in both Arts and Science. After some experience in higher grade schools he was appointed Assistant Inspector of Schools to the Manchester Education Committee. In 1906 he accepted the position of Assistant Inspector to the Leeds Education Committee and was promoted Inspector in 1910, and Organizer of Education in 1920. Mr. Thorne has had special experience of evening schools and technical classes and of the training of pupil teachers.

THE Right Hon. J. Herbert Lewis, M.P., Parliamentary Secretary to the Board of Education, announces that he has decided, on the ground of ill health, not to offer himself for re-election. Mr. Lewis has represented the University of Wales since 1918. His work on behalf of higher education in Wales has been most valuable. He took a prominent part in preparing the University Charter as well as in the negotiation which resulted in the payment of the penny rate by the County Councils and of the equivalent grant by the Treasury towards University expenses.

NEARLY every year brings to an end some one or other of the Victorian Finishing Schools for Girls. Cotswold-Mayfield, Cirencester, is a notable exception. It was founded in 1838 in Cheshire and was transferred later to North Middlesex, thence to Mayfield House, Southgate, and finally to Cirencester. The present principals, Miss Boyer-Brown and Miss Ansell are completing their jubilee year of school-keeping this year and the continued success of the school—so well known throughout the country—is undoubtedly due to their excellent organization and adaptability.

THE Council of the Cheltenham Ladies' College have received with great regret the resignation of Miss Lilian M. Faithfull, M.A., J.P., Principal of the College. Miss Faithfull, whose resignation takes effect in July next, desires to be relieved of the arduous administrative duties of the post and to devote herself to other branches of public service. Miss Faithfull has been Principal for fifteen years, and she has fully maintained the traditions of the College which her predecessor, Miss Dorothea Beale, made famous.

THE death of Miss Constance Jones will recall many memories to past pupils of Girton College. Miss Jones was Principal of Girton College from 1903 to 1916 and one of the pioneers of higher education for women. Educated at Cheltenham and afterwards at Girton, Miss Jones took a First Class in the Moral Science Tripos in 1880—one of the earliest distinctions to be won by a woman student at Cambridge. She was moral science lecturer at Girton from 1884 to 1903, and vice-mistress of the college from 1896 to 1903. She was the author of many books on logic and ethics.

WE are indebted to a correspondent for mention of the passing away of Frederick Andrews, for forty-two years head master of Ackworth, the famous Quaker school

(Continued on page 268.)

McDougall's

Invite all Teachers interested in Music Teaching to study their collection of Song Books and Books of Exercises in relation to the Memorandum on Teaching and Organization of Music Teaching in Secondary Schools recently issued by the Board of Education.

They wholly fulfil the recommendations contained therein.

"CHOICE OF SONGS."

Three out of the four songs named are in our collections. They are of suitable compass for children's voices, the need for which the report lays special stress on.

SONGS FROM FAR AND NEAR.

By JANET HAIG, L.L.A. 78 Songs, Rounds, Catches, &c. In Staff or Sol-fa Notations. Each, Paper, 9d. Cloth, 1s. Piano Edition, 8s. net. By post, 8s. 6d.

SONGS OLD AND NEW.

By E. MASON, Mus.Doc. There are no fewer than 80 Selections in this popular book. Songs of all types. In Staff or Sol-fa Notations. Each, Paper, 8d. Cloth, 10½d. Piano Edition, 7s. net. By post, 7s. 6d.

ENGLISH SONGSTER.

By E. MASON, Mus.Doc. This book contains the complete collection of English songs recommended by the B. of E. The very best of the English Folk Songs, &c. In Staff or Sol-fa Notations. Paper, 9d. Cloth, 1s. Piano Editions, 7s. net. By post, 7s. 6d.

VOICE TRAINING, &c.

Exercises on Vowel and Diphthong Sounds and on the Resonant Consonants, as recommended, are given in the following books.

SIGHT READING, &c.

This Memorandum states, "The best results have hitherto been obtained by teaching the Staff Notation through the Tonic Sol-fa method." This is exactly the method we follow in our Two Notation Singing Exercises. In these books we avoid all the errors noted in the Memorandum.

TWO NOTATION SINGING EXERCISES.

- Book 1. For Pupils from 7 to 9. Cloth, 10d.
- Book 2. For Pupils from 9 to 12. Cloth, 1s.
- Book 3. For Pupils from 12 to 15. Cloth, 1s.

Complete in one volume, 204 pages, 2s. 6d. net.

MUSICAL EXERCISES IN STAFF NOTATION.

In Three Books Carefully Graduated. Over 300 different Exercises. Each, Paper, 4d. Cloth, 6½d.

SOL-FA SIGHT READERS.

In Three Books, Carefully Graduated. Over 300 different Exercises. Each, Paper, 4d. Cloth, 6½d.

Our Music List, giving full contents of all our various Song Books, also Prospectuses of our various books of Exercises free on application. Please note the extremely moderate prices.

ADDRESS YOUR INQUIRIES TO

McDOUGALL'S EDUCATIONAL Co., Ltd.,

8 Farringdon Avenue, London, E.C. 4

A Selection from MACMILLAN'S BOOKS ON GEOGRAPHY.

PRACTICAL MODERN GEOGRAPHIES.

A Geography of the British Isles. By A. MORLEY DAVIES, D.Sc., A.R.C.Sc. 4s. 6d. Also in two parts. I.—ENGLAND AND WALES, 3s. II.—SCOTLAND AND IRELAND, 1s. 6d.

A Geography of Europe. By T. ALFORD SMITH, B.A. 4s. 6d.

A Geography of America. By T. ALFORD SMITH, B.A. With over 100 Maps and Illustrations. 5s.

A Geography of Asia. By JOSEPH MARTIN, B.Sc. 5s.

Essentials of Practical Geography. By B. C. WALLIS, B.Sc. 4s. 6d.

Practical Exercises in Geography. A Two Years' Course of Geography. By B. C. WALLIS, B.Sc. 3s. Key, 4s. 6d. net.

An Introduction to Practical Geography. By A. T. SIMMONS, B.Sc., and HUGH RICHARDSON, M.A. Sections I—IV. 4s. Or, Section I, Maps, 1s. 3d. Section II, THE GLOBE, 1s. 3d. Section III, CLIMATE, 1s. 3d.

CONCENTRIC GEOGRAPHIES.

By B. C. WALLIS, B.Sc.

A First Book of General Geography. With 7 Coloured Maps, Stiff Boards, 2s. 6d.

A Junior Geography of the World. With Coloured and other Maps. Part I, The World in General, 2s. 6d. Part II, The Continents in Detail, 2s. 6d. Complete, 4s.

A Geography of the World. 5s.

First Lessons in Geography. By E. MARSDEN, B.A., F.R.H.S., &c., and T. ALFORD SMITH, B.A., F.R.G.S. With Maps and Illustrations. 3s. 6d.

Geography for Junior Classes. By E. MARSDEN, B.A., F.R.G.S., and T. ALFORD SMITH, B.A., F.R.G.S. With Maps and Illustrations. 5s.

Geography for Senior Classes. By E. MARSDEN, B.A., &c., and T. ALFORD SMITH, B.A. With Maps and Illustrations. 7s. 6d.

Graphic Geographies. With Maps. By B. C. WALLIS, B.Sc. The British Isles. 1s. 6d. The British Empire. 1s. 6d.

Forms a combined text-book and atlas for beginners.

Contouring and Map-Reading. By B. C. WALLIS, B.Sc. Sewed, 2s.

The Continent of Europe. By LIONEL W. LYDE, M.A. 8s. 6d. net.

A First Geography of the British Isles. By W. M. CAREY, M.A., B.Sc. Coloured Maps; Stiff Boards, 2s. 6d.

A First Book of Commercial Geography. By T. ALFORD SMITH, B.A. Sewed, 2s.; Stiff Boards, 2s. 6d.

Macmillan's Geographical Exercise Books. With Questions by B. C. WALLIS, B.Sc., F.R.G.S. THE BRITISH ISLES, EUROPE, THE BRITISH EMPIRE, THE AMERICAS, ASIA AND AUSTRALIA, AFRICA, PHYSICAL GEOGRAPHY, 1s. 6d. each. Keys, with Questions, 4s. 6d. net each. INDIA. Sewed, 8d.

The Pupil's Class-Book of Geography. By E. J. S. LAY. ENGLAND AND WALES. Sewed, 1s.; Cloth, 1s. 3d. SCOTLAND. Sewed, 7d.; Cloth, 10d. THE BRITISH ISLES. Sewed, 1s.; Cloth, 1s. 3d. MACMILLAN & CO., LTD.,
St. Martin's Street, London, W.C. 2.

founded by Dr. John Fothergill in Yorkshire in 1779. Mr. Andrews died suddenly at Ackworth Cottage, Cloughton, on the Yorkshire coast, to which spot he retired two years ago when he left the school at which he had been so long the head, and where, too, he had been a boy and also an assistant master. Born in Sunderland in 1850, of an old Quaker family, Frederick Andrews gained his B.A. London, in 1872, but bad eyesight prevented his studying for a further degree. But this weakness was never allowed to interfere in his playing the game of life as few men play it, never disheartened and always ready to believe in men and causes. "Sympathy" was the keynote of the success he had with the boys and girls passing through his hands. He measured each one up, and one and all liked him. He was the leader and the "enthusiast," whether in the literature lessons he introduced, in the Sunday evening talks that live so vividly in the minds of his former pupils, and in the cricket field where he led the team of masters and boys able to meet any team in Yorkshire. Cricket was a passion, and one of his great hits is still pointed out on the Scarborough ground. A strong Liberal in politics, Frederick Andrews could have had any constituency in the country had he cared to stand for Parliament, and while not an orator, no man could hold both a friendly and a hostile audience better, for he "sensed" his audience immediately, and his entire belief in the causes he espoused, made opposition a difficult matter. In 1906 he was made a J.P. and served regularly on the Bench. It was said of him that he was as keenly interested in the sins of his fellow men as in their virtues. The faith of those who made him head of a great school at the age of twenty-seven was abundantly justified. A great educator in the more restricted sense he may not have been, but his claim to be a great head master none will challenge.

ONLOOKER.

CORRESPONDENCE.

DR. RUDOLF STEINER AS EDUCATIONIST.

To the Editors of The Journal of Education and School World.

SIRS,—Between three and four hundred men and women from all parts of Europe assembled last Christmas at Dornach, in Switzerland, to hear a Course of Lectures on Education, given by Dr. Rudolf Steiner. As one of the group of thirty teachers and others who attended the Course from England, may I, by your courtesy, ask your readers to consider what claims Dr. Steiner has to be considered an educationist?

In his Christmas Course of Lectures Dr. Steiner made a series of exact, positive, and important statements about the hidden nature of the child—the inner processes of its growth, the psychic sources of its physical condition, the needs of its deepest being, &c., &c.—matters concerning which the (physiological) psychologist can make nothing but inferences, matters which he would declare were beyond the reach of scientific observation. Dr. Steiner, however, asserts that what he has to say about the inner nature of the child, derived from super-sensible methods of cognition, is "science" no less certainly than the science of the orthodox physicist.

If these claims can be substantiated, educationists will be put in possession of a body of knowledge concerning the hitherto "undiscovered country," the inner nature of the child, that will become the basis of educational practice.

This is not the place to consider the possibility of "occult" or supersensible methods of investigation. What, as educationists, your readers will ask is (1) whether Dr. Steiner's statements hang together, and at the same time, give us new and valuable information about the child; and (2) whether in practical application his ideas work. Both these tests can be applied by your readers for themselves.

A SELECTION OF BELL'S TEXT-BOOKS

LATEST PUBLICATIONS

A Short History of Our Religion from Moses to the Present Day.

By D. C. SOMERVELL, M.A., Master at Tonbridge School. 6s. net. Also in four parts, bound in Manilla covers, 1s. 6d. each.

"We cordially commend this book to teachers. . . . In a really remarkable way Mr. Somervell keeps us interested all the way through."—*Saturday Review*.
"A book which every teacher ought to be compelled to buy and read."—*Evening Standard*.

"After the dullness of ordinary religious histories this book is like a refreshing draught. . . . No one need bewail now the absence of a history of our religion which a keen boy or girl can read without being bored."—*Westminster Gazette*.

A Book of Verse.

Chosen for Students at Home and Abroad by Sir HENRY NEWBOLT. School Edition. 2s.

Sir Henry Newbolt's new anthology aims at furnishing an introduction to English thought and language, which will be readily understood and welcomed by students both at home and abroad. Modern poetry is well represented, a large proportion of the poems being copyright. Among living authors whose work is included may be mentioned Laurence Binyon, Robert Bridges, Walter de la Mare, John Drinkwater, John Freeman, Rudyard Kipling, John Masefield, W. B. Yeats, and Sir Henry Newbolt himself.

Readable School Physics.

By J. A. COCHRANE, B.Sc. With 8 plates and over 60 illustrations in the text. 2s. 4d.

[*Bell's Natural Science Series*: Editor, E. J. HOLMYARD, M.A., Head of the Science Department, Clifton College.]

This book is an attempt to humanize elementary physics without popularizing the subject. Theory has been given the main prominence. Experiments have not been described unless to elucidate principles. References to the makers of scientific history are frequent, and connexion with the pupil's own experience is established as often as possible. It is believed that the book will prove a valuable adjunct to the practical work in the laboratory. In addition to the numerous illustrations in the text portraits are included of eight of the most celebrated pioneers in physics.

A Short Algebra.

By H. P. SPARLING, M.A., Assistant Master at Rugby School. 2s. 4d.

Contains examples on the various stages of School Algebra, knowledge of which is required in Physics, Trigonometry, and the Calculus. To attain this end within so small a compass, verbal explanation of straightforward processes has been left to the teacher. The exercises on these are all simple and will be found sufficient.

Except for the Calculus, the book covers fully the ground of the School Certificate Examination of the Oxford and Cambridge Joint Board.

STANDARD MATHEMATICAL TEXT-BOOKS

Messrs. Bell's Mathematical Books are as a general rule issued complete with or without answers; in many cases the Examples are published separately; most of the books are also issued in parts. Please write for details.

Pendlebury's Arithmetic. With 8,000 Examples. By C. PENDLEBURY, M.A. 20th Edition. 5s. 6d.

Pendlebury and Robinson's New School Arithmetic. 19th Edition. 5s. 6d.

Pendlebury and Beard's Commercial Arithmetic. 15th Edition, revised. 3s. 6d.

Pendlebury and Beard's Business Arithmetic. 3s. 6d.

Pendlebury and Beard's "Shilling" Arithmetic. 608th Thousand. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's New "Shilling" Arithmetic. 15th Edition. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's Junior Arithmetic. 13th Edition. With or without answers, 2s. 9d.

Pendlebury's Preparatory Arithmetic. 4th Edition. With Revision Papers, 2s. 6d.

Baker and Bourne's Public School Arithmetic. By W. M. BAKER, M.A., and A. A. BOURNE, M.A. 6th Edition. 5s. 6d.

Baker and Bourne's Student's Arithmetic. 8th Edition. 4s.

Baker and Bourne's "Shilling" Arithmetic. 5th Edition. 1s. 9d., or with answers, 2s. 3d.

Arithmetic. By H. FREEMAN, M.A. 8th Edition. Price reduced to 2s. 9d. [*Bell's Mathematical Series*.]

A "Shilling" Arithmetic. By J. W. ROBERTSON, M.A., B.Sc. 6th Edition. 1s. 9d.; with answers, 2s. 3d. [*Bell's Mathematical Series*.]

Arithmetic. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A. Part I, 4th Edition, 4s. Part II, 3s. 6d. Answers to Revision Papers, 1s. net. [*Bell's Mathematical Series*.]

A Short Course in Commercial Arithmetic and Accounts. By A. RISDON PALMER, B.Sc., B.A. 2s. 6d. [*Bell's Mathematical Series*.]

Practical Mathematics. By A. DAKIN, M.A., B.Sc. 5s. [*Bell's Mathematical Series*.]

Statics. By R. C. FAWDRY, M.A., B.Sc. 6s., or in two parts. Part I, 7th Edition. 3s. Part II, 4th Edition. 3s. [*Bell's Mathematical Series*.]

Dynamics. By R. C. FAWDRY, M.A., B.Sc. 6s. Or Part I, 3rd Edition. 3s. Part II, 3s. [*Bell's Mathematical Series*.]

The First Parts of these two books have been issued bound together, in response to requests received from many teachers. 6s.

Elementary Algebra. By C. V. DURELL, M.A., Senior Mathematical Master, Winchester College; G. W. PALMER, late Master of the Royal Mathematical School, Christ's Hospital; and R. M. WRIGHT, M.A., Eton College. With detailed introduction and full answers, for teachers' use, 8s. 6d.; without introduction and with only select answers, 7s.

PART I, by C. V. DURELL and G. W. PALMER. 3rd Edition. 4s. 6d. and 3s. 6d.

PART II, by C. V. DURELL and C. M. WRIGHT. 2nd Edition. 5s. 6d. and 4s. 6d.

Baker and Bourne's Elementary Algebra. 18th Edition. 6s.

Baker and Bourne's Shorter Algebra. 5th Edition. 3s. 6d.

Baker and Bourne's First Algebra. 9th Edition. 2s. 6d., or with answers, 3s.

Plane Geometry, Practical and Theoretical, *pari passu*. By V. LE NEVE FOSTER, M.A., sometime Assistant Master at Eton. In 2 vols. 3s. each. A third volume on **Solid Geometry** will be published immediately. [*Bell's Mathematical Series*.]

A Concise Geometry. By C. V. DURELL, M.A. 2nd Edition. 5s.

Baker and Bourne's Elementary Geometry. 13th Edition, revised. 5s. 6d.

Baker and Bourne's New Geometry. 5th Edition. 4s.

Baker and Bourne's First Geometry. 6th Edition. 2s. 3d.

Borchardt and Perrott's Geometry for Schools. By W. G. BORCHARDT, M.A., and Rev. A. D. PERROTT, M.A. 5s. 6d.

Borchardt and Perrott's New Trigonometry for Schools. 12th Edition. 5s. 6d.

Borchardt and Perrott's Junior Trigonometry. 4s. 6d.

Borchardt and Perrott's First Numerical Trigonometry. 8s. 6d.

Pendlebury's Elementary Trigonometry. 7th Edition. 5s.

Plane Trigonometry. By H. L. REED, M.A. 5th Edition. 6s. [*Bell's Mathematical Series*.]

Analytical Geometry of the Straight Line and Circle. By JOHN MILNE, M.A. 5s. 6d. [*Bell's Mathematical Series*.]

Co-Ordinate Geometry (Plane and Solid) for Beginners. By R. C. FAWDRY, M.A., B.Sc. 5s. [*Bell's Mathematical Series*.]

Complete Mathematical Catalogue on application.

G. BELL & SONS, Ltd., York House, Portugal St., W.C.2.

Two little books of Dr. Steiner's on Education are already in circulation in this country ("The Education of Children and Spiritual Science" and "The Art of Education"); the Lectures which he gave at Christmas are to be translated into English and published in book form; a Conference is being arranged at Oxford from August 15 to August 29, at which Dr. Steiner has undertaken to give a Course of Lectures on Education. Here is the material for the first test.

In the summer of 1919 the "Free Waldorf School" was founded to provide elementary and secondary education for the children of the workers and managers in the Waldorf Astoria Cigarette Factory in Stuttgart. From the outset, however, large numbers of other parents begged admission for their children. The school opened with about 250 scholars; to-day there are close upon 600; and new buildings are being erected on a large scale. The direction of the school is in the hands of Dr. Steiner; the education is based upon super-sensible research into child-psychology, and it is given exclusively by teachers whom Dr. Steiner has selected and trained. In the work of this school is the material for the second test of the value of Dr. Steiner's ideas.

The scales in this test are, however, weighted against Dr. Steiner. It is part of his social philosophy that education can only realize its fullest possibilities if it is liberated, and entirely liberated, from every vestige of control by economic and political interests. The Waldorf School is practically liberated on the economic side; it is supported in the main by grants from the Waldorf-Astoria Factory, given without conditions to those whose function it is to educate. On the political side the School is much less free. State laws and regulations affect in many ways the free development of the schooling.

I am sorry that this letter is already so long that I cannot do more than casually mention Dr. Steiner's far-reaching plea—revolutionary perhaps we ought to call it—for the entire liberation of education in the comprehensive sense of the word, art, science, and religion, everything that is of the spirit—

from dependence upon both State and industry. The idea is worked out in his "Threefold State," a book which has been translated into every significant European language, and of which over 100,000 copies have been sold. A concise statement of the conception, stressing the spiritual or educational aspect, appeared in the July issue of the *Hibbert Journal*; this has been reprinted, and is obtainable in pamphlet form from The Threefold Commonwealth League, 74, Grosvenor Street, W. 1.—Yours truly,

ARNOLD FREEMAN,
Warden of The Sheffield Educational Settlement.

CO-EDUCATION.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—The recent law-suit brought by a lecturer once at University College against that body for dismissing him because he had kissed a lady student at a ball raises the whole question of co-education. The London Hospital in refusing to accept any more female students decided against the practice, and this unimportant law-suit, which did not rehabilitate the reputation of the lecturer, accentuates the difficulties of the system. We may assert that as a rule English parents do not agree with the common education of the sexes between the ages of 10 and 18. There are certain well-known co-educational schools, but those who patronize them are apt to be considered cranky. Is it for the benefit of both sexes to be educated together after matriculation age? In days of yore, when only the plain or the very keen women sought admission to universities and university colleges, there was no great distraction for the young man whose fancy turns to love or flirtation. The pretty girls were kept at home by their mothers, who found no great difficulty in marrying them off. But now that the balance of the sexes has been upset by the war, and that middle-class incomes are not sufficient to keep girls at home in idleness, there has been a great rush of women towards higher education. And some of these are quite naturally attracted towards the

opposite sex. It is a question whether at this impressionable age students work better if they work together. At Oxford or Cambridge, where they meet only at lectures, no great distraction can be felt; but at those university colleges where the social life is in common such incidents as that at University College would scarcely make for serious study. It is no doubt true, as the Provost said, this was the only case he had known in his sixteen years of office. But, then, every scandal does not reach those rarefied realms where Provosts live. The advocates of co-education contend that by it the two sexes are led to consider each other as comrades and that men especially are less awkward and sex-conscious. This may be so, but does this gain surpass the loss? Would it be to the advantage of education to have colleges for women separate from those of men? Or is it now too late to turn back? INQUIRER.

AFRICA AND THE EAST.

To the Editors of *The Journal of Education and School World*.

SIRS,—All those who are, like the majority of your readers, experts in education, must welcome the unique opportunity offered by the Church Missionary Society in the presentation of "Africa and the East" at the Royal Agricultural Hall, Islington (May 17 to June 15). We are once more reminded—as so often at this time when the stage of the world's history seems to be set for a conflict which is laying bare Ideals—that behind and beneath the acquiescence in a creed lies the understanding of the Law of Life, without which humanity is doomed to perish. Somehow or other educators must bring home to the growing generation that the essence of the human—or 'humane'—spirit is that which we also call divine, *viz.* the power to lose and to find oneself in the life of one's fellows so that "each shall live for all and all shall care for each." This attitude has to be learnt in the family, the school, the township, the nation, the world. How can a man enter into lives of whose conditions he is ignorant? (How many well intentioned

political follies are due to just this kind of ignorance!) It is a task that daily taxes the skill and ingenuity of teachers—to bring home to their pupils the experiences of their fellow subjects in the East—the East with whose well-being our own is becoming daily more involved, whether we like it or no. Here then is a means by which this overwhelming task may be amazingly lightened. School-masters and school-mistresses will be found wanting if they let slip such a chance as is now offered of widening their pupils' horizon and extending for them the meaning of human fellowship by first-hand experience for which words, whether heard or read, are a very inadequate substitute.

It should be noted that within a thirty mile radius of London cheap railway-tickets can be had, on production of a voucher, at a fare and a third. For all further details, application should be made to the Home Education Secretary, C.M.S., Salisbury Square, E.C. 1.—Yours faithfully, MARY HAY WOOD.

TRAINING IN CITIZENSHIP.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—May I ask you to make known to the readers of your paper that the British Association Committee on Training in Citizenship has still on hand some copies of the Reports presented to the members of the Association at Cardiff and Edinburgh. The Cardiff Report contains a syllabus of the subject, together with notes that are of special interest and value to teachers on the organization and practice of regional surveys. The Edinburgh Report contains expressions of opinion by head masters and others on the scope of such training in the larger public schools, and has detailed accounts of the methods adopted in certain schools with success.

Copies of the Reports can be obtained from the Hon. Sec. of the Committee, 10 Moreton Gardens, S.W. 5. Single copies 1s. each, 9s. the dozen, and £3 the 100.

Yours faithfully,

S. SHAW.

MESSRS. LONGMANS & CO'S LIST.

Modern Inorganic Chemistry.

By J. W. MELLOR, D.Sc. With 334 Illustrations. 8vo. 12s. 6d.

The book has been written from the modern standpoint, and, in consequence, the more recently established principles of physical chemistry have been woven with the facts generally taught in chemistry classes in Universities, Technical Institutes, and other Schools.

Introduction to Modern Inorganic Chemistry.

By J. W. MELLOR, D.Sc. With 232 Illustrations. Crown 8vo. 9s.

This book can be regarded as an abridgment of the author's "Modern Inorganic Chemistry," in a simpler dress, and it has been adapted to suit beginners in chemistry.

Higher Mathematics for Students of Chemistry and Physics.

With Special Reference to Practical Work.

By J. W. MELLOR, D.Sc. With Diagrams. 8vo. 21s. net.

A Text-Book of Inorganic Chemistry.

By G. S. NEWTH, F.I.C., F.C.S. With 155 Illustrations. Crown 8vo. 9s.

Manual of Chemical Analysis, Qualitative and Quantitative.

By G. S. NEWTH, F.I.C., F.C.S. With 102 Illustrations. Crown 8vo. 9s.

Intermediate Physics.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. With Diagrams. 8vo. 15s. net.

A Text-Book of Physics : Including a Collection of Examples and Questions.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. SEVENTH EDITION. Revised by HERBERT MOSS, M.Sc. (Lond.), A.R.C.S., D.I.C., Lecturer on Physics at the Imperial College of Science and Technology, London. With Diagrams. 8vo. 21s.

A Text-Book of Practical Physics.

A Book of Reference for the Student working in a Physical Laboratory.

By W. WATSON, C.M.G., A.R.C.S., D.Sc. (Lond.), F.R.S. With 278 Illustrations. Crown 8vo. 10s. 6d.

Magnetism and Electricity. A Manual for Students in Advanced Classes.

By E. E. BROOKS, B.Sc., A.M.I.E.E., and A. W. POYSER, M.A. With 413 Illustrations. Crown 8vo. 12s. 6d. net.

Electricity and Magnetism. For Advanced Students.

By SYDNEY G. STARLING, B.Sc., A.R.C.Sc. With Diagrams. Crown 8vo. 12s. 6d. net.

A Treatise on Light.

By R. A. HOUSTOUN, M.A., Ph.D., D.Sc. With 328 Diagrams. 12s. 6d. net.

A Course in Practical Mathematics.

By F. M. SAXELBY, M.Sc., B.A. With 200 Figures, Examination Questions, and Answers to the Examples. 8vo. 12s.

Elementary Algebra for the use of Higher Grade and Secondary Schools.

By P. ROSS, M.A., B.Sc. Crown 8vo. Part I, without Answers, 3s. 6d.; with Answers, 4s. 6d.

Part II, without Answers, 3s. 6d.; with Answers, 4s. 6d.

Parts I and II, complete in One Volume, with Answers, 7s. 6d.

A School Flora for the use of Elementary Botanical Classes.

By W. MARSHALL WATTS, D.Sc. (Lond.), B.Sc. (Vict.), late Physical Science Master in the Giggleswick Grammar School. With 205 Illustrations. Crown 8vo. 4s. 6d.

BLACKIE'S SELECT LIST

GEOGRAPHY.

APPLIED GEOGRAPHY. By ALEXANDER STEVENS, M.A., B.Sc., Lecturer in Geography, Glasgow University. Crown 8vo. Price 6s. net.

For those who propose to enter the professions of the sea, surveying, engineering, prospecting, &c.

OUTDOOR GEOGRAPHY. By HERBERT HATCH, M.Sc., Geographical Master at the Technical and Secondary Schools, Nelson; Tutor in Practical Geography at the Summer Schools of the Educational Handwork Association. With numerous diagrams. 3s. net.

EUROPE AND ITS PEOPLES. By H. W. PALMER, B.A., Richmond County School. Twelve coloured plates from famous pictures, and many other illustrations and maps, and appendices. *New Edition*, revised to date. 2s. 10d. (*Lands and their Stories*, Book 5.)

OPEN-AIR GEOGRAPHY AND TOPOGRAPHICAL MODELLING. An Introduction to Field Geography and Army Drawing. For Public Schools, Colleges, and Cadet Units. By J. W. TOPHAM VINALL, A.R.C.A. (Lond.), Fellow of the Royal Society of Arts, and G. LINTON SNAITH, B.Sc. (Lond.). With Foreword by NOWELL SMITH, M.A., Head Master of Sherborne School. With numerous diagrams and illustrations. 5s. net.

MAN ON THE EARTH. A Course in Geography. By LIONEL W. LYDE, M.A., Professor of Economic Geography, University College, London. Fully illustrated. *New Edition*, revised to date. 2s. 9d.

OUR EMPIRE OVERSEAS. By H. W. PALMER, B.A., Richmond County School. Twelve coloured plates from famous pictures, and many other illustrations and maps, and appendices. *New Edition*, revised to date. 3s. (*Lands and their Stories*, Book 6.)

THE GROUNDWORK OF BRITISH HISTORY.

New Edition, brought down to 1921.

By GEORGE TOWNSEND WARNER, M.A., sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College. With Maps, Time Charts, and Full Index. 764 pp., super crown 8vo, 8s. net. Complete in One Volume.

In Two parts, 5s. each net. Part I, B.C. 55-1603; Part II, 1603-1921.

In Three Sections, 3s. 9d. each net: Section I, B.C. 55-1485 A.D.; Section II, 1485-1714; Section III, 1714-1921.

N.B.—FOR THE CONVENIENCE OF THOSE USING EARLIER EDITIONS OF THE "GROUNDWORK," A SUPPLEMENT HAS JUST BEEN ISSUED BRINGING THE BOOK DOWN TO DATE, PRICE 1s. 6d. NET.

THE GROUNDWORK OF THE WAR.

By C. H. K. MARTEN, M.A., Balliol College, Oxford; Assistant Master at Eton College. 1s. 6d. net.

Prepared specially for a concluding section of "The Groundwork of British History." It brings that work down to 1921.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction and Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. 3d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater Plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known "Junior School Shakespeare," which omits everything that might be thought undesirable in class reading. Price 7d. each.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. 6d. each.

BLACKIE'S LONGER FRENCH TEXTS.

From modern French Literature. A series of continuous Readings from Modern French Authors. Printed in large type, with brief Notes, Questionnaire, Phrase-list, and Vocabulary. Each volume contains about sixty pages and is furnished with a vocabulary and other teaching aids. The texts chosen are either complete short books or are skilfully abridged from longer works. 1s. each.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap 8vo. 7d. each.

Characteristic selections from well-known French writers, of sufficient length to be interesting in themselves, as well as representative, as far as possible, of the work of the several authors. Each book consists of from 40 to 64 pages, including a biographical and critical note, text, and explanatory notes. Certain volumes are issued with vocabulary, and a number are provided with questionnaire. Price, with a few exceptions, 7d. each; with Vocabulary, 9d. each.

The most successful French Course of recent years.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

PUBLISHED IN TWO VOLUMES.

By E. J. A. GROVES, Lic.-ts-L., Senior French Master, Bradford Grammar School.

First Year, 3s.

Second Year, 4s.

Prospectuses giving full particulars of above publications post free on application.

SUPPLEMENTARY AIDS TO CLASSROOM WORK.

V.

GEOGRAPHY.

By T. ALFORD SMITH.

GEOGRAPHY has been defined as the spatial distribution of the physical features of the earth, and the study includes not only the actual distribution but also its causes, together with the processes of survey and cartography. Consequently children have to learn about the earth as the home of man, they have to study the various distributions, and they must be trained not only to visualize distant scenes but also to think in terms of the map. The scope of geography is so wide and far-reaching that incidentally it often touches the border line and sometimes encroaches upon the domain of other subjects, such as history, astronomy, geology, and physics. Hence of all subjects in the school curriculum geography is probably the one which needs more supplementary aids than any other to make the teaching of it really effective. Up to date text-books, an abundant supply of maps, oral explanations, and blackboard diagrams are essential requirements of all geographical work. These essentials may be taken for granted, and it may be well to consider now in what way and by what means other help can be obtained to supplement these essentials.

I. *Geographical Laboratory.* One of the most important supplementary aids to the teaching of geography is a special room or laboratory in which the various branches of the work can be developed to the fullest extent possible. An enthusiastic teacher can of course give a good lesson in any room and under almost any conditions, but for really effective geographical work a special room is absolutely necessary. In many schools such rooms are now in use, but where a room has to be selected from a number of

classrooms it is a great advantage to choose a room with at least one window facing south so that observations of the sun can be made conveniently. The room selected should also be as large as possible in order to provide ample wall space for maps and diagrams, and floor space for desks, tables, cupboards and apparatus. Many lessons require two or three maps as well as diagrams to be exhibited before a class at the same time, and every member of the class should be able to see them without difficulty; this is usually impossible in the ordinary classroom. Other things, such as specimens and models, should also be ready at hand so that every point in the lesson may be explained and fully illustrated. When once a room has been assigned to geography it can soon be furnished with materials and in a short time simple pieces of apparatus, made by the pupils themselves, will be available for use in future lessons; in the meantime they must be stored, and for this purpose many cupboards, shelves, and cases are required.

II. Pictures. Pictures, whether in the form of prints, lantern slides, or cinematograph films, form one of the best aids to visualization, and wherever possible they should be studied in relation to the map. Several pictures of the same feature (*e.g.* Lulworth Cove) taken from different points of view should be studied with the six-inch Ordnance map. Text-books, written for junior and middle forms in secondary schools, are as a rule illustrated with photographs, but such illustrations are necessarily limited in number. These may be supplemented by the series of large pictures edited by P. L'Estrange (Philip & Son); by sets of pictures prepared respectively by R. Finch and S. M. Nicholls (Black), and by others.

(a) Picture post cards may be made a most valuable aid to geographical work, especially when they are supplied by the boys themselves. After a course of lessons on the British Isles a request for the loan of picture cards usually brings a miscellaneous assortment. The teacher and pupils should discuss why some of the pictures are geographically valuable while others are not; the selected cards should then be grouped and arranged for exhibition. In this way boys learn the type of picture that is wanted, and during the holidays they can look out for suitable cards to add to the collection.

(b) The stereoscope is also useful in showing pictures as it adds vividness to the scene and gives an idea of solidity and perspective. For the study of still objects, whether land forms, buildings, or plant environment, the stereoscope is a most suitable instrument. In many schools, however, only a few stereoscopes are provided and it is then impossible to use them in class work.

(c) The projectoscope and episcope. The projectoscope is an instrument for the screen projection of picture post cards. The card is placed in the projectoscope, and a good picture is at once thrown on the screen 10-12 feet away.

The episcope is still more effective for class teaching as any opaque object can be projected on the screen; book illustrations, maps, diagrams, printed matter can be shown with great clearness. Both instruments can be obtained from Newton & Co.

(d) The lantern. To large classes pictures can of course be shown most conveniently on a screen by means of lantern slides. For effective work it should be possible to darken the geography room and without delay to throw on the screen a few pictures to illustrate the actual lesson that is being given; for this purpose a lantern fitted with the electric light is the most useful one. As a rule a large number of slides should not be shown; the lesson should not be turned into a lantern exhibition. It is also a good plan to have a box with one side arranged in the form of a frame into which lantern slides can be placed; an electric lamp inside the box will illuminate the slides and the pictures can be examined before the lesson begins. Incidentally

the lantern can be used (i) to illuminate the globe for a lesson on day and night, and with a small globe to represent the moon to show the phenomenon of eclipses and the phases of the moon; (ii) to draw map outlines for teaching purposes. If a large sheet of drawing paper be used instead of the ordinary screen, and a map slide be put in the lantern, the teacher can then run his pencil round the coast line and so provide himself with a rough outline on which he can afterwards insert the details of his geography lesson. The great advantage of the method is that an outline of any size can be drawn and any number of outlines can be obtained in a few minutes.

(e) The cinematograph. As regards accurate visualization the educational possibilities of cinematograph films are indisputable, and in no subject can they be used with such advantage as in geography. The ordinary picture, whether it be in a text-book or a lantern view, represents stiff life; the moving picture makes the scene vivid and real and it is the nearest approach to a first-hand observation. Cinematograph films are, however, associated in most people's minds with picture palaces where emotional scenes, thrilling adventures, and freak pictures are shown with continuous persistency. Experiments are now being made by educationists in various parts of the country to decide how the cinematograph can be best adapted for scholastic purposes.

The Education Committee of the London County Council recently reported that, at present, financial considerations made it impossible for films to be introduced into schools under their authority; in the meantime a committee of experts has been appointed to investigate the effect of the cinematograph upon children. The manager of the Picture Playhouses, Ltd., has offered to assist the Education Committee by showing on two mornings a week films of an educational character at Covent Garden Theatre free on each occasion to a thousand children accompanied by teachers or other responsible persons. This offer is being considered by the Committee.

The attitude of the London County Council towards the cinematograph therefore appears to be based on three motives: (i) real concern on the subject of safety from fire risks as school buildings were not constructed for cinematograph purposes, (ii) hesitancy as to the value of the cinematograph as an instrument of education, (iii) economy.

The Macmillan Educational Film Company, Ltd., 32 Charing Cross, S.W. 1, has already drawn up a series of geographical programmes, each providing for an exhibition of an hour and a quarter. Among the fifteen programmes already prepared may be mentioned the following: The Atlantic coastlands of Europe; Great rivers of the world; A journey from London to New Zealand; Across British North America. This Company is prepared to supply cinematograph apparatus to schools at the lowest possible prices and to instal trustworthy projectors in school halls or large classrooms; if this cannot be done arrangements might be made with a picture-house to show a particular set of geographical slides at a time convenient for school children to attend.

The Selborne Society, in conjunction with British Instructional Films, Ltd., is using its influence to introduce the cinematograph into the school curriculum. It has already introduced films into its well-known series of lectures; among these "Our Wonderful Homeland," by the Extension Secretary (Mr. Percival Ashton), is fully illustrated by a new series of films. Where a school does not possess a cinematograph apparatus the Society offers a service of travelling lorries fully equipped with projectors and other requisites.

III. Observational Aids. These aids are of the greatest value because they enable a boy not only to make accurate observations but to record them in a systematic way. In the geography room, a daily record should be kept of temperature, pressure, rainfall, direction of the wind, and altitude of the sun. Each boy in a form should help to

keep this record by making the observations at regular intervals. For pressure readings, a simple form of barometer is preferable to an elaborate instrument, for example: a long tube closed at one end can be filled with mercury and inverted in a bowl of mercury; the height of the column in the tube can then be read by means of a ruler graduated in centimetres. The advantage of this simple barometer is that boys can see how it works although the readings are not very accurate. To measure rainfall a rain gauge with a measuring glass can be obtained at small cost. Diagrams should be drawn to represent the readings of temperature, pressure, rainfall and wind direction, and notes should be written on the weather conditions prevailing at the time. The results of this work may with advantage be compared with the facts on the daily weather charts issued by the Meteorological Office.

The altitude of the sun can be determined practically by measuring the shadow thrown by a needle on a horizontal plane; this is best done at noon as the result can be checked by referring to the declinations of the sun given in "Whitaker's Almanack." The relation of the altitude of the sun to the intensity of the rays can then be explained.

The records thus obtained and the representation of them in graphic form will frequently be made use of when lessons on climate and weather are being given. Boys will already understand by practical experience what is meant by such terms as low pressure, high pressure, one inch of rain, the vertical sun, &c.; they will be able to apply their knowledge in an intelligent way to the problems which have to be solved in the geography course, such as the relation of the monsoons to the summer low pressure area over south-east Asia.

IV. *Apparatus.* Simple apparatus made by boys is often of much greater value in teaching geography than elaborate and expensive models. The actual making of such apparatus is not necessarily geography at all, but the fact that it is made by boys adds a personal interest to its use. The following are a few examples of work that can be done by boys in class.

(a) From contour maps relief models can be made in cardboard, plasticine, or modelling clay. Models of areas known to the pupils, such as the school district, are always worth making and the best specimens can be kept for future use. Care should be taken that the purely mechanical part of this work (such as cutting out the contours and building up the model) does not take too much time. The model is of little educational value until it is finished.

(b) From the record of the altitudes of the sun, draw a graph on cardboard; cut the graph out and connect the two ends together. Then use the edge of the curve to represent the apparent path of the sun round the earth and explain the seasons, plane of the ecliptic, etc.

(c) Make a sundial in cardboard. Cut a right angled triangle, having one of the acute angles equal to the latitude of the place. The hour angles can be drawn geometrically on the horizontal plane (see Simmons's and Richardson's *Practical Geography*, pp. 141-7, Macmillan & Co.), and then be projected on to a vertical plane.

(d) Out of thin cardboard make a cone to fit the school globe; then draw on the cone straight lines to the apex of the cone to show the projection of the meridians and draw concentric circles to show the parallels of latitude. Unfold the cone and a network of lines for a map on the conical projection will result.

For more accurate work and for more advanced instruction apparatus will have to be provided; for example, in the higher forms it will be necessary for lessons in map-making to have a plane table, sight ruler, chain, prismatic compass, clinometer, &c. These instruments are fully described in the various books on practical geography and in books on map-reading and map-making.

V. *Museum.* In every geography room there should be a small collection of specimens to be used as illustrations

in the geography lesson. Specimens of the more common formations in our own country should certainly be available, e.g. for a lesson on the Pennines a piece of carboniferous limestone and a piece of millstone grit will be required; specimens of Portland and Bath stone as examples of the oolite series; granite and basalt as examples of igneous rocks, and so on. It is of little use talking about these formations unless actual specimens are shown.

Again, specimens of commercial products, such as raw cotton, jute, rubber, &c., are essential for lessons in economic geography.

The museum may be made a means of rousing great keenness in boys for their geography work; boys are always fond of making collections of things and they are often able to add considerably to the number of exhibits in the school collection.

VI. *The school journey.* So far we have considered those aids which are connected especially with work in the geography room, but work in the field and visits to places of geographical interest in the neighbourhood of the school will be of great help in stimulating a desire for geographical knowledge. The school journey has been defined as "an extended educational expedition away from school and home." The time of the journey is usually eight to fourteen days. Although many subjects are suitable for study on the school journey, such as history, geology, botany, and natural history, there is no subject of greater importance than geography. The landscape, the structure of the land, the rivers and valleys and weather conditions will naturally be studied by boys who are spending nearly the whole day in the open air. The knowledge thus acquired and the experience thus gained will be of inestimable value when the formal geography lessons are being given in the classroom; the teacher will be able to appeal to actual examples obtained in the field. School journeys were undertaken in the first place by enthusiastic teachers who sacrificed part of their holidays for the benefit of their pupils, and the expenses were paid by teachers and pupils. After some years various Local Educational Authorities, recognizing the great value of school journeys, allowed children to be taken away in term time and paid the purely educational charges. Mr. Fisher's Education Act, however, gave such authorities power to pay fares, lodging, and other expenses connected with the journey. The result of this regulation has been to bring the school journey almost entirely under the control of the Local Education Authority, hence the number of schools, the number of children, the length of stay, and the distance travelled, have been regulated and in many cases limited by the Education Authority. The recent call for economy has also made some authorities refuse to sanction school journeys at all. The introduction of the cinematograph into schools and the development of the school journey are problems which will no doubt be solved satisfactorily in a short time when normal conditions again prevail. The teaching of geography will be materially assisted by both.

RUSSIAN RELIEF AND RECONSTRUCTION FUND.—At a recent meeting held at the House of Commons, Mr. H. A. L. Fisher, the Minister of Education, made a strong appeal for the help to raise the funds necessary for the care, training, and education of 1,000 Russian children at Constantinople. Mr. Fisher dwelt on the supreme importance of this endeavour. For the sake of the future of their country, it was urgently necessary that as many of the coming generation as possible should, in school-homes under British control, in which every breath of sound Russian atmosphere was retained, be built up into healthy manhood, made mentally vigorous to serve their Fatherland. Mr. Fisher said in the course of his speech, "I make an urgent appeal to the country, and more particularly to that part of the public which is concerned with education, to lend its support to this excellent and necessary work of salvage." Cheques may be sent to Commander O. Locker Lampson, M.P., and Colonel John Ward, M.P., at the House of Commons.

UNIVERSITIES AND SCHOOLS.

ENGLAND.

Lord Birkenhead and Mr. Sidney Peel have been appointed by the Chancellor as High Steward and Deputy Steward. The High Steward defends the "rights, customs, liberties, and franchises"

Oxford.

of the University for a modest stipend of £5 per annum, his Deputy receiving £2. The *Oxford Magazine* pays a graceful tribute to Mr. Peel, scholar, soldier, author, and man of affairs, who not long ago accepted a seat on the new Finance Board, devised by the late Vice-Chancellor, and week by week through term leaves his work in London to visit Oxford and to give "the benefit of his advice, talent, and knowledge to the affairs of the Court and Council." This case must be singular or the Royal Commission would not have favoured the exclusion of the non-academical element in the councils of the University. "The presence of such [outside] representatives," the Commission report, "would hamper the Council in its work without securing, as a rule, any compensating advantage."

Prof. A. L. Dixon, F.R.S., has been elected to the Waynflete Chair of Pure Mathematics.

The *University Reporter* publishes the University Accounts for the year ended September 30, 1921.

Cambridge.

Total receipts amounted to £67,115 18s. 5d., exclusive of the Treasury grant of £30,000 and £4,455 12s. 3d. from other University funds. Payments are some £4,000 greater. Benefactions include £28,000 for the new engineering buildings (of which £25,000 was contributed by Sir Dorabji Tata), £6,000 from Mr. Molteno as a further gift to the Institute of Parasitology, £80,000 from Sir William Dunn's trustees for bio-chemistry plus the cost of the new building for this subject, and £10,000 from the Swedish banker, Marcus Wallenberg, for Scandinavian studies.

The *Times* correspondent writes with enthusiasm of the Geographical School, the newest in the University, at present located in the Sedgwick Museum. Part I of the Geographical Tripos (established in 1919) lays a broad and solid foundation in all branches of the subject for those entering business or the teaching profession, or official work; Part II provides a more specialized training for original investigators. Numbers have increased from seventy-nine in 1914 to 132 in the present year.

The University deplores the death of Prof. A. D. Waller, the distinguished physiologist, whose name is honourably associated with the Physiological Laboratory, unhappily housed in the administrative building at South Kensington, yclept by the London cabman the Imperial Institute. His investigations showed great originality and had useful applications—his researches on the administration of chloroform, for instance. His later work on the electrical manifestations of the emotions open up somewhat terrifying possibilities for the criminal and wayward. The suggestion which has been made that the Laboratory should be permanently established as a memorial to Dr. Waller is welcome in its personal aspects, but difficult to justify on more general grounds, as the University is well supplied with resources for physiological research in institutions related to Colleges and Hospitals providing a more congenial atmosphere than an administrative building. But the whole question of research institutes will have to be worked out in connexion with the new University site, and it may be hoped that means will be found for perpetuating Waller's memory.

London.

The Military Education Committee's Report for 1921 is published in *extenso* in the *University Gazette*. It appears that the O.T.C. has not yet regained its pre-war strength and vitality. Its "Roll of War Service," published last August as a volume of 380 pages and five pages of illustrations, records the war service of the 4,276 officers trained in the University O.T.C. who saw war service, 665 of whom are included in the roll of the fallen. Their war distinctions number 1,726, and include 5 V.Cs, 55 D.S.Os, and 591 M.Cs, and—most appropriately—the destruction of a Zeppelin on its way to London. Copies of the Roll have been presented by the Senate of the University to other Universities, and some of their friendly and encouraging acknowledgments are quoted in the Report. "A great record," says one Vice-Chancellor, "and one of which not only the University of London, but the whole University life of the country may well be proud." About £700 has been collected for the O.T.C. War Memorial. The Report includes, as an appendix, a statistical summary of war work. Apart from the O.T.C., 315 graduates and students were recommended for commissions in the earlier stages of the war, and rendered distinguished service.

The Report of University College for 1920-21 is packed with interesting information, educational and financial. Students numbered 3,143 (1,835 men and 1,308 women), of whom 2,408 took day courses, 502 evening courses, and 233 vacation courses; and of the day students 432 were for post-graduate or research work. Large contingents of students came, India (50), France (59), Russia (50), Sweden (40), and other European countries, but the numbers from the Dominions overseas are smaller than would be expected. The same observation applies to the numbers of students who took University degrees, which was only 145, including 33 higher degrees. Expenditure amounted to £150,482 2s. 7d. (and income, including £65,567 7s. 9d. from fees), and there is a deficit of £5,815. The policy of publishing full financial details is to be commended and might well be copied by the University. Developments include the new building for Anatomy now in course of construction, provided by the Rockefeller Trustees; and a new engineering laboratory. Funds are required for Scandinavian and Celtic studies, for applied statistics, and for the new chemical laboratories. Student societies have shown great activity in promoting the social and athletic life of the College.

WALES.

The annual report of the Welsh Department has just been issued. It is based on the previous reports

Reports of the Board of Education.

issued by the Central Welsh Board, but as it tends to give prominence to certain features of these reports which might otherwise be overlooked in the wealth of detail which they contain, it is always interesting and suggestive. The report draws attention to the serious difficulties in the way of accommodation arising from the fact that there has been an increase of 63.1 per cent in the number of pupils since the close of the war. During the year 1920-21 the number was 23,129. The schools have now reached the limit of their accommodation. The problem before education authorities is a complex one, especially as the increasing financial stringency has made it necessary to restrict more and more severely the expenditure of money on buildings. The remedy, in the opinion of the Welsh Department, is to set up a carefully devised system of admission tests, and to restrict the privilege of admission to public secondary schools to those pupils who appear most likely to benefit thereby. The Board, however, does not give the schools any guidance as to how such pupils are to be selected, for entrance tests, however skilfully and carefully conducted, are not by any means infallible. In Wales the number of pupils in secondary schools is barely 10 per 1,000, and therefore it is very probable that the percentage of unfit pupils is almost negligible, so that as long as the Board of Education persists in its present policy it is clear that a number of qualified pupils must be excluded from our secondary schools.

Reference is made to the reports of the Examiners of the Central Welsh Board on English and Welsh. The teaching of these languages is apparently not satisfactory in many of the schools, and the pupils are suffering from an inability to express their thoughts freely. This defect necessarily affects all the other subjects in the curriculum in a greater or less degree, and therefore it is important that a systematic and thorough inquiry into the question be instituted. But whether the report of the English examiner justifies the gloomy view of the commentator from the Welsh Department is by no means certain. He has apparently forgotten that the examiner of necessity in his report emphasizes the main faults, and that he states that "much excellent work has been accomplished," and that in many schools "there have been revealed an appreciation of literary form and matter, a keen and critical knowledge of literary work and development which are worthy of unqualified praise." The report also draws attention to the wide divergence in the work of the schools—"In some, the answers reveal careful, intelligent, and thorough teaching, producing good work which it is a pleasure to examine; in others, the answers are poor, and the style is slipshod." The work, therefore, does not appear to be uniformly unsatisfactory or of a low standard as the comments of the Welsh Department might lead one to expect. The strictures on the teaching of Welsh are based on some remarks of the examiner on the work done in the year 1919-20, but no credit is apparently given to the schools for the great improvement in the work presented in July, 1921, and to which the report of the chief examiner of the Central Welsh Board in Welsh bears testimony.

There are also some interesting paragraphs in the Report on the leaving ages of pupils, on advanced courses, and "The Cult of the Beautiful in the Schools." During the year under

review 53.2 per cent of the pupils left before they attained the age of sixteen, which means that the improvement required to reach the standard set by the new regulation is still very great, and can only be reached by the utmost exertion on the part of all concerned.

Lord Kenyon, the Pro-Chancellor of the University, reports that all the authorities have paid their contributions of a penny rate, bringing in a sum of £51,000, together with an equivalent amount in the form of a Treasury Grant. It had been feared that the slump in the coal trade and the assessment of the railways would lead to a diminution in the total amounts derivable from a penny rate, and it is therefore gratifying to know that the sum received is equivalent roughly to the estimate. The University has decided to confer Honorary Degrees at the next meeting of the Court at Aberystwyth next July on Mr. Charles E. Hughes, Secretary of State of the United States, who is of Welsh origin, for his eminence as a statesman and his services to the cause of international peace; Sir Thomas Middleton, of the Board of Agriculture; Lord Pontypridd, Sir Garrod Thomas, Sir Vincent Evans, Professor J. E. Lloyd, of Bangor University College, Professor Foster Watson, and Dr. Edward John Russell. The Honorary Degree of M.A. will also be conferred on Mr. Edgar W. Jones, head master of Barry County School, and Miss C. Davies, head mistress of Llanelly County School.

SCOTLAND.

Education Authority Election. The triennial elections for the Education Authorities which took place at the beginning of the month, have been chiefly remarkable for the slightness of the change made in the *personnel* in most counties. Over all there has been much talk of economy, and in the West of Scotland, where a considerable section of the population is Irish Catholic, there has been a bitter sectarian outcry on the part of the Presbyterian churches, in which an alleged "unholy alliance" between Labour and Catholic candidates has been denounced to the detriment of both. Apart from this the main interest of the election has been in the operation of the Proportional Representation method of voting. As the most important application of this method so far made in this country, the results are of more than educational significance. The difficulty is as usual one of interpretation. Most people seem to be agreed that it ensures the election of representatives of religious minorities more satisfactorily than the cumulative vote used in the election of the school boards. But it is open to the same objection of allowing an unduly large share to the churches in the control of the schools at the expense of other sections of the community. It has undoubtedly given an impetus to sectarian organization, to enable the different churches to secure what they regarded as their due representation, and the discussion of general educational questions which might have been expected to occupy the minds of the electors has been overwhelmed by a variety of more or less irrelevant issues. One weakness of Proportional Representation which has been made manifest in the one or two counties where religious and other rivalries have produced a poll of 50 or 60 per cent of the electors—as compared with the 20 per cent or so who voted in the last election—is the tendency to over-represent class-conscious minorities. In the present cases, many Labour and Catholics candidates have been squeezed out automatically by the increase in the number of voters. Obviously they were over-represented before and probably will be again when the present flurry of zeal has died down. Another weakness of the system is a serious insensitiveness to changes of public opinion. There has been much criticism of the sitting members of the authorities, but except in the cases indicated most of them have come trooping back. It would appear that with the single transferable vote a man who enjoys popularity with a section of the electorate on any ground whatever can disregard ordinary criticism.

Religious Instruction. The large number of ministers in the new authorities, and the considerable proportion of the laymen elected on a church ticket, makes it probable that in some areas there will be a renewal of the friction between authorities and teachers in regard to religious instruction, which was one of the unexpected results of the institution of county authorities under the Act of 1918. In view of this unhappy possibility, the appearance of two memoranda giving the points of view of the two sections in the National Joint Council is timely. It is made clear that these are not authoritative statements of the views of either side, but that they are put forward for information and guidance. In the teachers' memorandum it is premised that the object

of religious instruction is not simply the memorizing of catechism and scripture, but to make religion a vital factor in the children's experience, and that since that can only be achieved through teachers personally interested in religion, any attempt to force all teachers to give religious instruction, or to control the teaching by a system of external supervision, is foredoomed to failure. Following up this idea it is suggested that so far from teachers being compelled to give religious instruction, every encouragement should be given to those indisposed to do so for any reason, to refrain. This can best be done, it is maintained, by leaving the staff arrangements for religious instruction in the care of the head master, acting in consultation with his staff. Further, since the teaching of dogmatic statements about religion through a catechism is pedagogically unsound, and is apt to hurt the consciences of many teachers who would otherwise be glad to teach religion, it is recommended that the use of a catechism be left to the option of the teachers of a school and not made a general obligation on the schools of a district or county. Examination and inspection are condemned as tending to cause an exaggerated importance to be attached to externals at the expense of spiritual effect. Finally it is recommended that in those counties where difficulties have arisen since 1918 the education authority should create a special committee to deal with all matters concerning the religious instruction of the young throughout its area, with teachers and members of the authority in equal numbers. The reply of the authorities' representatives to this presentation of the teachers' case is in general sympathetic. While pointing out that in some respects their claims are pitched too high, the memorandum recognizes appreciatively the good work done by the great body of the teachers. The authorities, it is said, have not generally adopted supervision in the sense of control, but rather as a stimulus and help to teachers and pupils, and it is desirable that this should be recognized on both sides. With regard to the idea of leaving teachers free to undertake religious instruction, it is suggested, however, that no person is well advised to choose the profession of a teacher in Scottish schools who is indifferent to religion and all that the term connotes. There is hearty concurrence in the proposal for the establishment of joint committees of teachers and authorities in areas where there is a lack of harmony at present.

The Education Department and the Cinema. In replying to the communication of an education authority which after careful inquiry proposed to make systematic use of the cinema in its schools, the Education Department took the opportunity to give a general statement of its views on the subject. "I am directed to state," wrote Dr. Macdonald, the secretary, "that while the Department are prepared to recognize the potential value of the cinematograph when used under favourable conditions as an adjunct to the work of the schools, they are of opinion that these conditions can only be fully secured when it is possible to use the apparatus in individual schools in direct illustration of the actual instruction included in the curriculum of the school. It would appear to be essential that the films to be exhibited should fit in with the work of the school rather than that the curriculum should be interrupted to permit of the exhibition of such films as may be available. The Department are of opinion, therefore, that the inauguration of such an experiment as is suggested would be premature until the development of apparatus and the production of suitable educational films render these conditions possible of attainment."

Superannuation Contributions. At first Scottish teachers were disposed to accept with resignation the change from a non-contributory to a contributory system of superannuation, as proposed by the Geddes Committee, and not to insist on a technical claim of rights. But after-thoughts have made many of them doubtful of the wisdom or the rightness of this attitude of mind. If the 5 per cent reduction of salary which it involved had been all the sacrifice asked of teachers, it would have been different. But it is quite evident that the effect of the Government's economy plans in respect of education, not to mention the economy plans of the authorities in the interests of the rates, may be a still larger reduction, and that a too ready acceptance of the superannuation change would only make the way for this reduction easier. Whether as a matter of fact there will be an organized protest from Scotland against the change is still doubtful, because the Educational Institute has not declared its policy. Many teachers, and especially those coming near retiral age, are going on the assumption that protest will avail nothing, and are asking how they are likely to be affected. Though no official indication has been given in regard to details beyond the fact that a special Scottish scheme will be necessary, certain figures, regarding the cost of the present superannuation allowances for the first

year of operation, elicited from the Education Department by Treasurer Barker, of Stirling, show that a 5 per cent change will more than cover the entire pension scheme. The main element of uncertainty in the calculation is the increasing cost, due to the increase in salaries within the last year or two. Another point in doubt concerns the beneficiaries. Unless the money returnable principle be adopted, the great majority of the contributors will find their interest in the scheme limited to paying in for the benefit of the minority who go on teaching long enough to establish pension rights.

IRELAND.

The disturbed conditions of the country make reconstructive work whether in education or other matters difficult, and cause serious anxiety to those whose main desire is to improve its general welfare. Both parts of Ireland suffer from the unrest, but the South more than the North. In the South the Government's whole energies are absorbed in the task of self-preservation, nor can any real progress or reform be effected until the country has had the opportunity of deciding between the opposing political factions, and the sooner this is given the better. In the North the strong minority which has objected to the new Government there will not settle down until the question of the form of the Southern government has been definitely solved.

The work of education is meanwhile hampered in the North by the refusal of a large group of schools to recognize the new educational authority. They refuse to fill up forms and declare their intention to boycott the Northern Intermediate Examinations. This is of a piece with the refusal of the Nationalist members to sit in the Northern Parliament. All this presumably was in the cause of non-partition. But whatever hopes there may have been of unity or non-partition in education or any other matters a few months ago, they have for the present all receded into the distance, and must wait on events. The progress of Irish educational reform is likely to be slow in the next few months.

Both the Northern and the Southern Governments have decided to double the so-called "Interim Grant" of £50,000. In the North Intermediate Teachers will receive £24,000 instead of £12,000, and in the South £76,000 instead of £38,000, that is, for the present year, and payment will be made, it is hoped, before the school year closes in June. As the previous rules for the allocation of this grant have provoked dissatisfaction, attempts are being made to arrange a fairer basis. In the South the Minister of Education has asked a small committee of teachers to co-operate with the Intermediate Commissioner in formulating a scheme for submission to him. Next year it is the intention of both Governments—if in power—to abolish all the various intermediate grants and to substitute one general grant, and the "Interim Grant" as such will disappear.

As the year draws on towards its educational close in June, arrangements for the following year's work become essential. The Southern Government has wisely decided to continue the present system of Intermediate Examinations for another year, 1922-3, so that in June next year there will be held for the last time examinations in three grades, Junior, Middle, and Senior, with pass and honour papers, and prizes and exhibitions, but not with results—fees dependent upon them. There will certainly be some alterations in the rules and syllabus of examinations with a view to increasing if possible the percentage of passes which has hitherto been very low, and the study of Irish will be encouraged; Irish will be made alternative to English without being made compulsory. With this last exception the programme for 1923 will resemble, in its main outlines, those familiar for many years past. It is hoped before the autumn of the present year to have a scheme of education ready for 1924, in which the number of examinations will be reduced to two, the first to be taken by pupils of fifteen or sixteen, and to be called a Junior Certificate Examination, and the second by pupils of eighteen, to be called a Senior or Leaving Certificate Examination. The syllabuses for these will be radically different from those of the present Intermediate system.

The Provisional Government has approved of a new regulation proposed by the Registration Council, which the previous Government was unwilling to accept and which the Intermediate Board declared itself unable to carry out without considerable expense and trouble. The new regulation will add a new column to

the register in which will be recorded the total number of completed years of service in teaching in recognized schools for each registered teacher. The number of years is to be shown separately for (a) teaching in Intermediate or other recognized schools in Ireland, (b) teaching in recognized schools elsewhere, and (c) service as head master or head mistress. Service means teaching for at least thirty weeks, and for at least 450 hours during those weeks, or for the head of a school a period of headship of at least thirty weeks. There will be considerable difficulty in securing this record for all the teachers now on the register, but the record will be a valuable one, and will be necessary when schemes of salaries and increments, and of pensions, are drawn up. The Intermediate Office has already issued to the schools a circular asking for these particulars, with an introductory note that "The Government of the Free State will have under consideration the questions of the salaries and length of service of registered teachers in schools under the Intermediate Education Board."

The Department has issued its programme of summer courses for July. There will be nine courses for teachers in technical schools and classes, schools of art and art classes, viz. in (1) Mechanical Engineering, (2) Glass Blowing, (3) Commerce, Commercial Arithmetic, Economic Geography, and Economics, (4) Cabinet Making, (5) Chair Making, (6) Painted Furniture Making, (7) General Art, (8) Millinery, (9) Household Handicraft; and four for teachers in day secondary schools, viz. (1) Experimental Science, (2) Drawing, (3) Manual Work (Woodwork), and (4) Domestic Economy. There will also be a course in August in Rural Science (including School Gardening) for teachers in National Schools.

FOREIGN AND DOMINION NOTES.

FRANCE.

The prosperity of a country rests mainly on its elementary schools. Judged by her higher primary schools, France is building well for the future. On November 15, 1921, there were in 254 such schools for boys 36,470 pupils, and in 194 for girls, 31,352 pupils. Mixed schools being included, there was a total number of 68,002 pupils in 469 schools. Now, on December 1, 1920, the total was 61,880 pupils, so that the increase for the year was 6,122—a rate never before attained. In 1881 numbering 189 schools with 18,196 pupils, the higher primary schools and their pupils were being steadily multiplied year by year until the war arrested progress. Since it ended, the recovery has been remarkable: there are now 11,000 more pupils in the schools than when it began. France believes in education.

It is into these higher primary schools that, if the teachers in the *lycées* had their way, the unsuitable elements in the secondary schools would be driven. Yet even if modern studies were excluded from the latter, the French parent would send his dullard to the *lycée*, as giving a *cachet* of social standing, and would have him taught Latin. A French writer, we remark incidentally, has said: Latin is like the piano; "On y a vu un signe de bonne éducation, ce qui a été un grand malheur pour le latin comme pour le piano"; and are there not some in England, too, to whom a term's Latin means the final varnish of a complete schooling? But it is clear that modern languages are not to go: there is to be, as we put it, a Modern Side. Before the Education Commission of the Senate the Minister of Education delivered his views on the reform of secondary education. Such education should become once more, he said, *une culture*. The programme of 1902 had not yielded the results expected. Early specialization, the breaking up of classes, and the overloading of time-tables had had their day. Literature and science must join in imparting a true culture, whether the literature be classical or modern. In the literature of Greece and Rome, France, as we have stated before, has an abiding faith, being resolute, nevertheless, as the wise in England are resolute, that it shall not be forced on the unfit, and being derisive of the gentility that is acquired by an ineffectual struggle with Cornelius Nepos. But is the Modern Side to be on an equality with the Classical? To have the same sanctions? To prepare for a *baccalauréat* giving access to all careers? These are the questions that France is debating.

GERMANY.

We have called attention to the development of People's Universities (*Hochschulen*) in Germany, and have exhibited the internal organization of that at Frankfurt a.M. At Berlin there is the

Educative Excursions.

Arndt-Hochschule, which, as might be inferred from its name, is nationalistic. Its lecture rooms are in the Städtische Baugewerkschule and in the Friedrich-Wilhelm Gymnasium; whilst an interesting feature of its instruction is the educative excursion. Thus on April 30, the students repaired to the Müggelberge, the subject for the day being a "Look back into German history"; on May 21, they will stay their steps and their thoughts at Potsdam (Sans Souci); and on June 11, they will study the actual working of a German farm at Nauen. For the summer a three-days' wandering in the district of Priegnitz is projected, Havelberg, Heiligengrabe, Wilsnack and Perleberg being among the places to be visited. The region is full of memories for the German traveller. Was it not at Lanz in West Priegnitz that Friedrich Ludwig Jahn, the father of German gymnastics, was born? Was it not at Perleberg that he met the mysterious English bearer of dispatches whom he escorted to Hamburg? Havelberg was a bishop's see as early as the tenth century, and the church at Wilsnack is the oldest, it is said, in all that district. Let us not be ashamed to imitate the Germans. Let us help our working men to read the history of the past on the face of their country.

UNITED STATES.

Last summer there was held at Honolulu, in the Hawaiian Islands, a "Pan-Pacific Congress," under the impulse of American educators. Still wider is the scope of a projected International

An International Congress.

Congress under the auspices of the National Education Association. It is hoped that this will meet in the United States in 1923. The President of the Association has addressed a formal letter to President Harding asking him to proffer to the nations represented at the Conference on Disarmament an invitation to join America in this educational congress. That a general acceptance will be followed by beneficial results cannot be doubted. "The teacher," says a statement drawn up by the Association, "whether mother, priest, or school master, is the real maker of history, and the school will shape the destiny of to-morrow." Some proposed objectives are: 1. To promote peace and goodwill among the nations of the earth. 2. To bring about a world-wide tolerance of the rights and privileges of all nations. 3. To develop an appreciation of the value and the inherited gifts of nationality through centuries of progress and development. 4. To secure more accurate and satisfying information and more adequate statements in the text-books used in the schools of the various countries. 5. To foster a national comradeship and confidence which will procure a more sympathetic appreciation among all nations.

NEW ZEALAND.

The New Zealand Educational Report just received is dated October 21, 1921, and relates to the year ended December 31, 1920. It sets forth the reforms and improvements made in the time

Some Features of Education.

under review—provision for extending (as from a date not earlier than January 1, 1922) the compulsory school age from fourteen to fifteen; increase of salaries for primary teachers and teachers in native schools; the grading of secondary-school teachers; arrangements for the interchange of New Zealand teachers and teachers of other countries; the appointment of itinerant teachers to give house-to-house instruction in isolated districts, and many other beneficial changes. The General Council of Education, made up of representatives of the Education Department, Education Boards, and primary, secondary, and technical teachers—a Council of which we have no counterpart in England—met in June, 1920, and recommended, among other things, the creation of a National Advisory Council on Research. The New Zealand University, an examining body, and the affiliated colleges, receive annual statutory grants from Government; 44 per cent of the students receive free tuition; but it does not appear that any special encouragement is held out to Research. As to secondary schools, there is one for every important centre in the Dominion, and in 1920 nearly 16,500 pupils were receiving secondary education, a large number of them without payment. Of primary schools the number grew from 2,400 in 1919 to 2,437 in 1920; the total enrolment in them increased; but, on account of widespread epidemics, there was a small decline in the attendance. Good

provision was made for conveying children to school by railway, road, or water. Maori children were well cared for in native village schools (in which the registration rose from 5,190 to 5,416), mission schools, private boarding schools, and elsewhere. On technical education a greater sum was expended than in the previous year. To sum up, the Report for 1920 exhibits no startling conquests of new heights, but a steady wish to climb. Those who have any thought of migrating may be assured that there are good educational facilities in New Zealand.

INDIA.

To judge from the Report on the Progress of Education in 1920-21, the Punjab was little affected by the

Progress in the Punjab.

non-co-operation movement. There was, it is true, a persistent decline in the number of students attending at Arts Colleges; it was caused, however, by a drift, not wholly to be deplored, towards technical and vocational training. From the Central Training College it is reported: "No students left the College because of non-co-operation"; from the Training College, Lyallpur: "One student left the college on account of non-co-operation"; from the Training College, Hoshiarpur: "Non-co-operation passed harmlessly over the college." As to education in general, substantial progress was made, and, in particular, there was a steady expansion in the education of girls, especially in the primary stage. We observe that further consideration was given by the University to the Report of the Calcutta University Commission, though no definite policy was evolved. Four Intermediate Colleges were opened during the year at Multan, Ludhiana, Rawalpindi, and Ambala.

The medical inspection of secondary schools, suspended during the war, was resumed, not without need.

Hygiene.

Lahore City showed 55 per cent of its children to be diseased. Throughout the Punjab defects of sight, granular eyelids, and enlarged tonsils were common; chests were often narrow, muscles flabby, spleens enlarged. To remedy these evils co-operation between school and home is required. The section of the Report devoted to primary schools makes no mention of medical inspection in them. In all schools beneficial results, it is hoped, will follow the improved system of physical training that is being adopted.

LOCAL EDUCATION AUTHORITIES.

A number of Local Education Authorities have passed

The Geddes Proposals.

resolutions protesting against the proposals of the Geddes Committee for the reduction of national expenditure upon education. The Dudley Education Committee, however, adopts a different view. It has recorded its appreciation of the valuable report compiled by the Geddes Committee, and is of opinion that expenditure has increased to an unreasonable extent and is not producing corresponding educational results. That the present system of paying grants is not satisfactory and leads to extravagance, and that, in consequence, a system which encourages more economical administration should be devised. The Dudley Committee are also of opinion that free secondary education should be limited to children whose mental calibre justifies it and whose parents are unable to pay for it.

The Nineteenth Annual Report of the Lancashire Education Committee states that the chief activities of the Committee during the year have been

Lancashire.

concerned with the reduction of expenditure. Investigation has been made into every branch of the service, and wherever possible, economies have been introduced. The chief reduction has been in the technical and evening schools; as the programme for these schools is revised annually, a reduction can be made much more easily than in other branches. In the midst of much that is discouraging, however, it is satisfactory to record continued progress in the provision and development of secondary schools. Three new schools have been opened, and in other areas steps have been taken to deal with congestion. In view of the increased cost of maintaining secondary schools, the Committee have given special attention to the means of securing that the existing provision shall be used to the best possible advantage. They have taken steps to emphasise the importance of an adequate Admission Examination, calculated to ensure that only those applicants are admitted who are likely to profit by secondary education. After giving full consideration to the question of raising fees, it has been decided that it is inadvisable, at the present time,

to do so, having regard to the substantial decreases in wages, and the extent to which the schools provide for education for children of wage-earning parents.

The quarterly report of the Somerset Education Committee contains remarks on the recommendations of a Subcommittee appointed by the County Council to examine and report upon the current expenditure of the Council. That the Education Committees of County Councils are now suspect and regarded as spend-thrift, is one of the melancholy results of the rapid increase in educational expenditure. It looks as though the relation of confidence and goodwill that has existed between the County Councils and their Education Committees for nearly twenty years will now be disturbed. In deference to the demand for economy, the Somerset Committee has reluctantly decided to dispense with the services of one of two general inspectors. It is to be regretted, perhaps, that these officers are called inspectors, as it suggests that their functions are similar to those of the officials of the Board of Education, whereas they are of much more value to the schools and the general administration. The Committee has also decided to reduce the number of adult teachers by sixty-eight, to replace a certain number of higher qualified by lower qualified teachers; to increase the number of schools under the charge of Uncertificated Head Mistresses, and to combine departments. It is also proposing to close thirteen small rural schools; the expenditure on Evening Class Instruction is to be reduced, and a more stringent examination imposed in connexion with the admission of pupils to Secondary Schools.

PRIMARY SCHOOL NOTES.

The Re-action of the Geddes Report.

THE somewhat over-emphasized welcome accorded to the Geddes Economy Report on Education by a certain section of the Press has been followed by the inevitable reaction, and in the opinion of responsible authorities the ultimate effect of the Report promises to be not a less, but a greater expenditure upon public education. There is reason to believe that the passionate desire for a fuller school system which has grown so rapidly in England since 1870, and particularly since 1914 was entirely overlooked not only by the Economy Committee concerned, but by many members of Parliament. The attack on the children's schools has aroused a feeling of resentment in the industrial districts which is perhaps escaping general notice because it has not yet found an opportunity for public expression, save in the recent Parliamentary bye-elections. The paltry economies now being carried out by some of the small Education Authorities in reducing teaching staffs, overcrowding school classes, and raising the age of admission to schools, are causing deep dissatisfaction among parents; and numerous candidates in the constituencies are already emphasizing the importance of improving existing school facilities, particularly in respect of higher education.

The Attack upon the Teachers' Superannuation Act.

It is significant that the views of the Geddes Committee, and the recent opinion expressed by the President of the Board of Education, relative to the increases of teachers' salaries made under the terms of the Burnham Agreement, have been very coldly received by the public. It is becoming obvious, too, that the proposal to impose a reduction of 5 per cent upon the salaries of teachers in order to finance their Superannuation Act constitutes a clear breach of faith in two respects: (1) Teachers throughout the country were induced to accept lower scales of salary because of the existence of the Superannuation Act. (2) Thousands of young people have been induced to enter the teaching profession during the last two years upon the inducements offered by the improved scales of salary and the Superannuation Act. Specific cases can be given of the two types referred to.

The fact that members of the Civil Service are to be left untouched, although they have had gross increases of salary by way of increments and bonus considerably in excess of salaries received by teachers, is making a strong appeal to the average Member of Parliament, who is keenly sensitive to the necessity of respecting legislative enactments. And it is notable that members who have responsible business positions to maintain are among those who regard the 5 per cent cut in salaries and the destruction of the Teachers' Superannuation Act with considerable misgiving; for if there is no sanctity

for such an Act, they reason, what defence can there be to a reduction of the rate of interest on the National Debt, a proposal to make a levy on capital, or to break the terms of any contract, express or implied, as soon as they become due for performance. There is an increasing body of opinion that the attack will ultimately be defeated by the House of Commons, especially if the party whips are withdrawn when the vote is taken.

Ex-Service Men as Teachers.

IN the great majority of cases the training of Ex-Service candidates for the teaching office has now been completed, and they are carrying out their professional duties in all parts of the country. It is naturally difficult to form trustworthy opinions as to their capacity at such an early stage, but it can be stated with confidence that they have made an excellent impression upon their school colleagues. That they will find the work arduous during the first years of teaching is beyond question; but they will have many compensations. Their experience in the field will always command the respect of their pupils; their wide knowledge of life and men gained under exceptionally favourable conditions of study should give them a keen insight into the character of young people; subjects such as geography and history, handicraft and organized games, should provide lessons full of joyful interest. There is a general desire on the part of teachers to welcome the service men, and the promise of a new and virile spirit which they bring. Under existing conditions of school inspection the initiative of young teachers is quickly crushed, and the lingering remnants are too often harnessed to the chariot of the latest "plan" in education. It is possible that the "will-o'-the-wisp" tendency among some teachers to follow first one then another of the educational shibboleths does not encourage the formation of firm fibre in the character of children; and, no doubt, this element of instability in the schools has to some extent been a natural result of the serious gaps made by the war in the ranks of virile and capable men teachers. There is a confident belief that the new teachers will bring into the schools a full measure of that genial, hopeful personality which served the nation so well during the dark days of the war.

The Dismissal of Teachers.

THE dismissal of teachers on grounds of economy in all parts of the country is assuming serious proportions. Many married teachers who remained in the schools after the termination of the war owing to the inducements offered by the Superannuation Act, have already been given notice; and while it is true that places have been found for the Ex-Service men who have recently completed their college courses of training it cannot be said that the outlook for intending teachers is at all promising. In some districts substantial reductions have been made in infant school staffs; in others, vacancies have been filled by transferring teachers from more liberally staffed schools. Before the close of the present year there is every prospect that thousands of teachers will be out of employment; and in view of the fact that the training colleges for women are practically all crowded, it seems probable that the degree of unemployment will increase substantially during the next two years. While the recruits who were so eagerly welcomed to the teaching profession in 1918 are being systematically turned adrift at the moment when they have been completely equipped at a cost of hundreds of thousands of pounds, existing teachers are being subjected to a strain which threatens to rival that which prevailed during the war. In the meantime the interests of the children are being overlooked; the feeling of parents is being strongly moved; teachers for the first time in English history contemplate an active campaign in the realm of educational politics. It is already clear that parliamentary candidates who propose to support the Geddes recommendations for economizing in education will meet with stern opposition in the constituencies.

VACATION BIBLICAL STUDY.—The twentieth vacation term for biblical study will be held this year at Oxford on July 29–August 12. An inaugural address will be delivered by the Bishop of Oxford on "Inspiration." Courses of lectures by the Rev. H. Wheeler Robinson, the Very Rev. A. E. Burn, the Rev. C. F. Nolloth, and the Rev. C. J. Shebbeare have been arranged. Lectures will also be delivered by Prof. C. H. Turner, Miss Eleanor Jourdain, and the Rev. C. W. Emmet. Hebrew and Greek readings will be held throughout the term. Further particulars may be obtained from the Secretary, Miss E. Lawder, 25 Halifax Road, Cambridge.

MACMILLAN'S LATEST LIST

A Dictionary of Applied Physics. By Various Writers. Edited by Sir RICHARD GLAZEBROOK, K.C.B., Sc.D., D.Sc., F.R.S. With many Illustrations. In 5 vols. Vol. I, MECHANICS—ENGINEERING AND HEAT. £3 3s. net.

*** Send for Detailed Prospectus.*

*** It is the first attempt which has been made to bring within the compass of a single work the latest results of research, and the most approved methods in all branches of the subject. It constitutes, therefore, a unique work of reference, containing a mine of information which must prove invaluable, not only to those engaged in educational work but also to all manufacturers who are vitally concerned with the question of Physics as applied to Industry.*

A Text-Book of Inorganic Chemistry. By T. MARTIN LOWRY, C.B.E., F.R.S., D.Sc., Professor of Physical Chemistry in the University of Cambridge. Illustrated. 28s. net.

NINTH EDITION, REVISED.

Introduction to Physical Chemistry. By Sir JAMES WALKER, LL.D., F.R.S. Ninth Edition. 16s. net.

SECOND EDITION. THOROUGHLY REVISED.

A Treatise on Bessel Functions and their Applications to Physics. By ANDREW GRAY, F.R.S., Professor of Natural Philosophy in the University of Glasgow, and G. B. MATHEWS, F.R.S., sometime Fellow of St. John's College, Cambridge. Second Edition prepared by A. GRAY and T. M. MACROBERT, D.Sc., Lecturer in Mathematics in the University of Glasgow. 36s. net.

The Modern Reader's Bible for Schools. THE OLD TESTAMENT. By RICHARD G. MOULTON, M.A., Ph.D. With map. 12s. net.

The Technique of Teaching. By SHELDON E. DAVIS, Ph.D. 7s. net.

Noctes Latinae Alterae. Written, Adapted, or arranged by WALTER MADELEY, M.A. With Illustrations. 2s. [*Elementary Classics.*]

Principles & Practice of Business.

With Examination Questions in the Theory and Practice of Commerce, Business Organization, and Commercial Correspondence. By G. MAIRET, Lecturer in Commerce at the City of London School. 5s.

[*Life and Work Series.*]

The Book-Keepers' Magazine.—"A useful and interesting text-book. The volume covers most of the ground coming in the intermediate syllabuses of the leading examining bodies, and it also contains a good deal of information which will be of service to the advanced student."

An Introduction to Engineering Drawing. By J. DUNCAN, Wh.Ex., M.I.Mech.E. 4s. [*Life and Work Series.*]

PART IV, JUST PUBLISHED.

A Class-Book of Physics. By Sir RICHARD GREGORY and H. E. HADLEY, B.Sc. Part IV, Light. Illustrated. 2s.

First Books of Science. New Vol.

A First Book of Applied Electricity. By S. R. ROGET, M.A., A.M.Inst.C.E., &c. Illustrated. 2s. 6d.

The Technical Journal.—"It is clearly written, and if it stimulates a reader to ask for more, and also a better understanding of some of the formulæ, a useful service will have been served."

W. & A. K. JOHNSTON'S PUBLICATIONS.

THE EDINA GEOGRAPHIES.

Reduced Prices—Manilla covers, 1s. net; cloth backs and stiff sides, 1s. 4d. net each.

Book I.— British Isles.	64 pp., 11 Maps.	Ready.
Book II.— Europe.	72 pp., 14 Maps.	Ready.
Book III.— Asia.	63 pp., 12 Maps.	Ready.
Book IV.— Africa.	64 pp., 21 Maps.	Ready.
Book V.— North America.	64 pp., 14 Maps.	Immediately.

The characteristics of this series are: **Conciseness, Clearness, Cheapness.** They are specially suitable for use for University Locals and Civil Service Examinations. Each lesson is followed by appropriate exercises.

The O.R.E. Atlases (Orographical, Regional, Economic). 32 pp. of coloured and black and white maps, and Index to each part. 1s. 6d. net. each.

Part I.— The British Isles.	Ready.
Part II.— Europe.	Ready.
Part III.— Asia.	Ready.
Part IV.— Africa.	Immediately.

A NEW WALL ATLAS.

NEW "EFFECTIVE" WALL ATLAS OF EUROPE & THE MEDITERRANEAN.

6 Maps (size 28 × 34 inches), clearly and strikingly lithographed in colours, mounted, dissected to fold, and eyeletted. Price in strong case, 35s. net per set. Single maps, 6s. net each.

No. 1.— Physical and Communications.
No. 2.— Summer Pressure and Rainfall.
No. 3.— Winter Pressure and Rainfall.
No. 4.— Summer Temperature.
No. 5.— Winter Temperature.
No. 6.— Political.

These maps have been carefully prepared in order, as far as possible, to "tell their own story" and make Geography teaching really *effective* by allowing the pupil to visualize together both geographical causes and their effects.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C. 2.

TOPICS AND EVENTS.

PARENTS' NATIONAL EDUCATION UNION CONFERENCE.—The annual conference of the Parents' National Education Union will be held on May 29–June 1, at Ambleside. Members of the union and those teaching in the Parents' Union School are invited, and tickets, price 3s. 6d. each, may be obtained from Miss Morton, P.N.E.U. Office, 26 Victoria Street, S.W. 1; teachers will receive complimentary tickets on application.

THE EDUCATION GUILD.—The series of lectures on the Report on the Teaching of English which has been taking place fortnightly at the Education Guild, 9 Brunswick Square, has proved most interesting and valuable. The last lecture of the series was held on March 17th, when Mr. J. E. Barton, Head Master of the Bristol Grammar School, speaking on "The Teaching of English in relation to Art," demonstrated the wonderful possibilities of correlating literature and the classics with the arts and crafts of the period. He showed how the history of other times could be made more real and the psychology of the races more clear if the pupil could study at the same time the forms of art in which the peoples had expressed themselves, whether in painting or architecture or other craftsmanship.

"JOURNAL OF SCIENTIFIC PHYSICAL TRAINING."—The Easter Term issue of this journal well justifies the title "Games for Girls" number. It contains the three papers read at the January Educational Conference as arranged by the Ling Association: "The Biological Point of View of Games for Girls," "Facts about Games Playing Girls at Dartford," and "The Fertility of Married Gymnastic Teachers." In addition to these there is an article foreshadowing a degree course in gymnastics, and others on Postural Deformities, Navy Gymnastics, General Principles of Nutrition, Physiology of Muscular Movements. An interesting account is also given of an Intensive Course in Physical Education for Elementary Teachers. The articles, written in clear and popular style, are profusely illustrated, and afford interesting reading for all connected with education.

TRAINING FOR TEACHERS OF AGRICULTURAL SUBJECTS.—The Board of Education have approved an arrangement by which students of University College, Reading, in receipt of grants under the Board's regulations for the training of teachers may be admitted to the degree course for an external B.Sc.(Lond.) in agriculture as an alternative to a course in arts or pure science. Students must have passed the London Matriculation or an equivalent examination prior to entering the College and, normally, training in teaching proceeds concurrently with the degree work throughout the three years' course necessary to secure recognition as certified teachers. In the case of a student who has passed the Intermediate Science (Agriculture) Examination before entering the College, the first two years are spent in completing the degree course and a post-graduate year in the theory and practice of teaching. The object of the new regulations is to increase the supply of certificated teachers with special qualifications in agricultural subjects who will be available in central, continuation, and secondary schools in rural areas. Full particulars of the scheme can be obtained from the Tutorial Secretary, University College, Reading.

NATURE STUDY.—The first number of a new illustrated monthly magazine called *The Nature Lover*, price 7d., has just reached us. It is an artistic production the object of which seems to be to interest the reader, by light and pleasantly written articles, in the wonders of Nature, both animate and inanimate. The coloured frontispiece, a Japanese bird study, is a beautiful piece of work, and the other illustrations are excellent of their kind. The opening article is entitled "The Nature Lover," and then follow notes for the month on plant and bird life. The daffodil forms the subject of the next article, in which some descriptive botany is skilfully interwoven with the myths concerning this flower. There are also informative articles on birds' eggs, in which their shape, size, and coloration are discussed, and on rainbows. In the latter, some attempt is made at giving an account, in the simplest and most popular language, of the origin of the bow. Altogether, it is a most attractive little magazine for both the country dwellers, who will be encouraged to take a new interest in the beauties of Nature surrounding him, and for the inhabitant of the town or city, who will be able to enjoy the better his occasional countryside rambles.

"A Great Institution."—*Schoolmaster.*

University Correspondence College.

FOUNDED 1887.

Principal: WILLIAM BRIGGS, LL.D., D.C.L., M.A., B.Sc.,
F.C.S., F.R.A.S.
